

Appendix R2 – Private Noise Wall Locations

Schedule “C” Class Environmental
Assessment for Coleraine Drive Grade
Separation

Private Noise Wall Locations

As part of the Environmental Study Report for the Coleraine Drive Grade Separation Project, a comprehensive Noise Impact Study has been conducted to assess the potential impact on noise-sensitive areas within the vicinity. This assessment is crucial for understanding the implications of the proposed infrastructure changes on the local environment and residents.

In conjunction with the Noise Impact Study, the Region of Peel's Private Noise Wall Conversion Policy provides guidelines for addressing noise attenuation in residential areas. This policy outlines the reconstruction and relocation of private noise walls adjacent to Regional roads, emphasizing a fair and consistent approach to noise management.

The current document focuses on private noise walls, as identified in the Noise Impact Study and Appendix R1. These private noise walls, located along the Coleraine Drive corridor and adjacent areas, represent opportunities for neighborhood enhancements. The detailed design phase will incorporate these features to improve the overall quality of life for local residents.

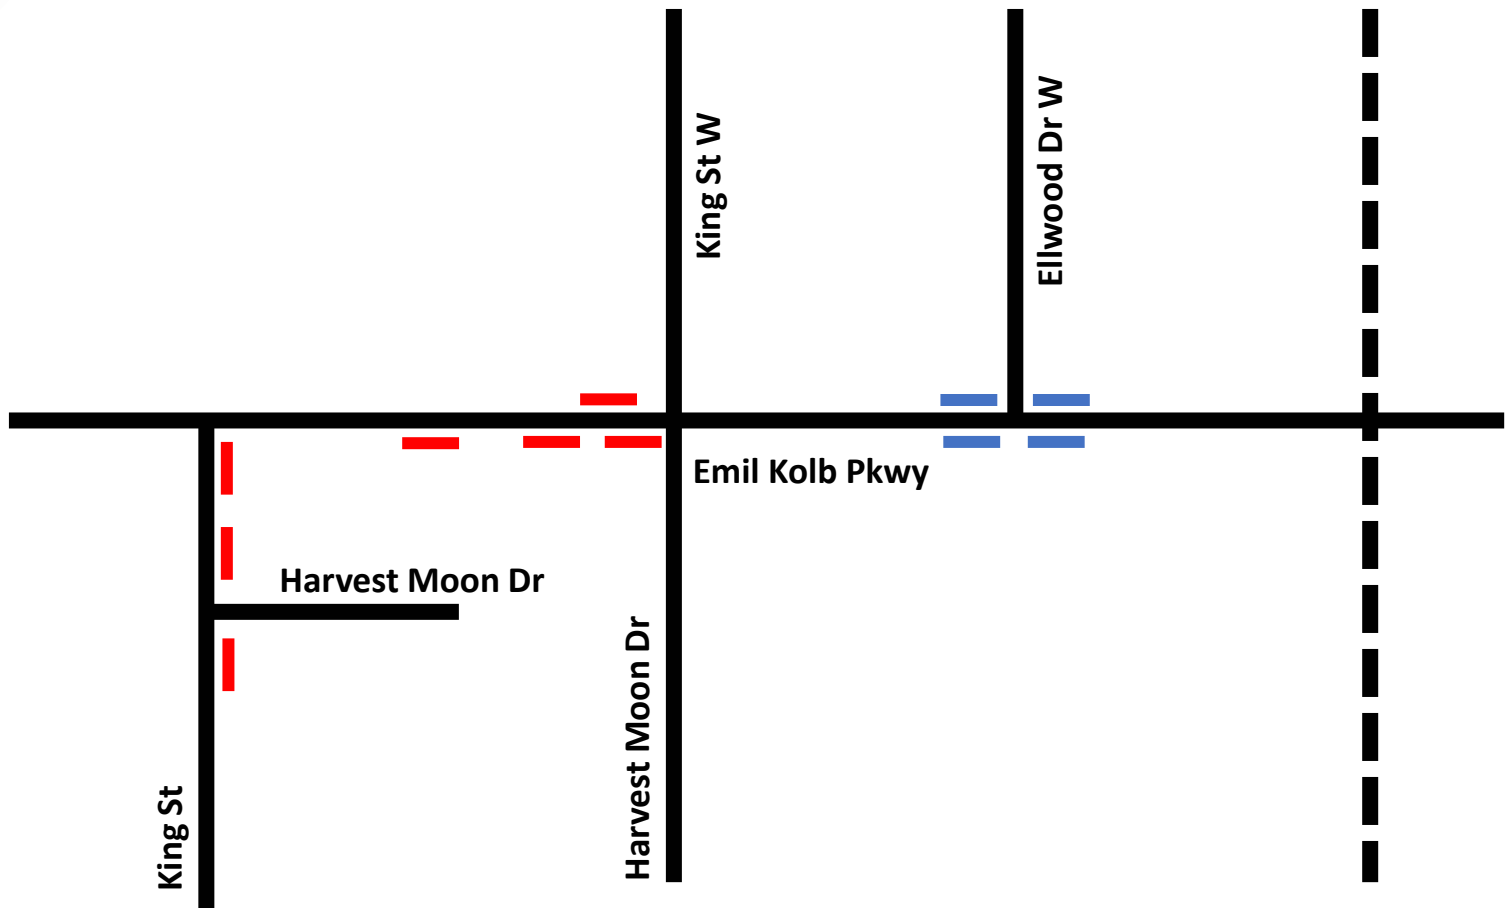

The Noise Wall Location file serves as an appendix to the Environmental Study Report and will be utilized in subsequent project phases. It provides critical data on the locations, types, and materials of existing private noise walls, ensuring that future development aligns with Regional noise management policies and enhances the community's environmental standards.

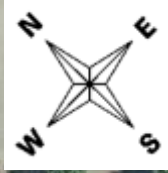

For further information and updates, please refer to the project website, which will be regularly updated with Environmental Study Report (ESR) files and design recommendations at [Peel Region Transportation Construction](#).

- Private Noise walls within the EA limits
- Private Noise walls outside of the EA limits

- Railway Track
- Road
