

Cleaning-Up Blood and Body Fluids

Protect your eyes, nose and mouth from blood or body fluids when cleaning up spills by turning your face away or wearing a face mask.

1 Put on disposable rubber gloves.

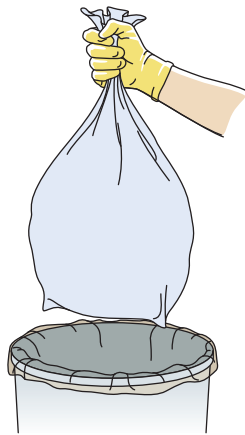

2 Soak-up the spill with paper towels.

3 Wash the area with detergent and water.

4 Disinfect the area with a strong (1:10) bleach solution. Mix 125mL of bleach with 1L of water and allow 2 minutes contact time.

5 Safely discard all paper towels and gloves in the garbage.

6 Wash your hands with soap and water.
