

Water Treatment - Too Valuable To Waste A Drop

Activity Overview:

Learn about the true value of water through an interactive display model. Students will learn about the water cycle, and the time and process involved in getting water from “source” to “tap” and back to “source”. In Peel, tap water is clean and safe to drink because it is cleaned before it goes back to the lake, and again before it comes to our taps.

This activity will be done with the Ontario Clean Water Agency. One of their staff will give you instructions on the day of the event.
