

Oil Spill

(Peel Art Gallery Museum & Archives)

Activity Overview

The activity will be set up with containers of watered down acrylic paint in containers. Students will add drops of oil to these containers and observe how they do not dissolve into the water. The PAMA educator and volunteers will discuss why this happens and make real-world connections to oil pollution in oceans (i.e. impacts on habitats). Finally, students will press a blank postcard to the surface of the "water" to create monotype prints.

*The activity will be done by the PAMA staff, students will receive further instructions upon arrival.
