Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

Provincial [AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial [AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2019

Abandoned Mine Information System:

Provincial [AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Anderson's Waste Disposal Sites:

Private [ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Aboveground Storage Tanks:

Provincial [AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private [AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jun 30, 2020

Borehole:

Provincial [BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Environment and Climate Change Canada cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: Jan 2004-Dec 2017

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Chemical Manufacturers and Distributors:

Private CHEM MAN

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 - Jun 2020

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Delisted Fuel Tanks:

Provincial DELISTED TANK

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Jul 31, 2020

Drill Hole Database:

Provincial

DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2019

Environmental Activity and Sector Registry:

Provincial

EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Aug 31, 2020

Environmental Registry:

Provincial

EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Aug 31, 2020

Environmental Compliance Approval:

Provincial

ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Environmental Effects Monitoring:

Federal

EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Environmental Issues Inventory System:

Federal

EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Emergency Management Historical Event:

Provincial

EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

List of Expired Fuels Safety Facilities:

Provincial [EXP](#)

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Contaminated Sites on Federal Land:

Federal [FCS](#)

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Apr 2020

Fisheries & Oceans Fuel Tanks:

Federal [FOFT](#)

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal [FRST](#)

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial [FST](#)

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Ontario Regulation 347 Waste Generators Summary:

Provincial **GEN**

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

TSSA Historic Incidents:

Provincial **HINC**

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Landfill Inventory Management Ontario:

Provincial **LIMO**

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Canadian Mine Locations:

Private **MINE**

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial **MNR**

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

National Analysis of Trends in Emergencies System (NATES):

Federal

[NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

[NEES](#)

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

National PCB Inventory:

Federal

[NPCB](#)

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Ontario Regulation 347 Waste Receivers Summary:

Provincial [REC](#)

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial [RSC](#)

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jul 2020

Retail Fuel Storage Tanks:

Private [RST](#)

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jun 30, 2020

Scott's Manufacturing Directory:

Private [SCT](#)

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial [SPL](#)

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: 1988-Nov 2019

Wastewater Discharger Registration Database:

Provincial [SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2017

Anderson's Storage Tanks:

Private

TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal

TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2018

Variances for Abandonment of Underground Storage Tanks:

Provincial

VAR

Listing of variiances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variiances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Waste Disposal Sites - MOE CA Inventory:

Provincial

WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Aug 31, 2020

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Apr 30, 2020

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

Provincial

[AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

[AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2019

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial

[AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jun 30, 2020

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Environment and Climate Change Canada cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: Jan 2004-Dec 2017

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Jun 30, 2020

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 - Jun 2020

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Dec 2019

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Sep 30, 2020

Drill Hole Database:

Provincial [DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2019

Delisted Fuel Tanks:

Provincial [DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Jul 31, 2020

Environmental Activity and Sector Registry:

Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Sep 30, 2020

Environmental Registry:

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Sep 30, 2020

Environmental Compliance Approval:

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Sep 30, 2020

Environmental Effects Monitoring:

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jul 31, 2020

Environmental Issues Inventory System:

Federal [EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial **EMHE**

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report:

Provincial **EPAR**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land / water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2019

List of Expired Fuels Safety Facilities:

Provincial **EXP**

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Federal Convictions:

Federal **FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal **FCS**

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Apr 2020

Fisheries & Oceans Fuel Tanks:

Federal **FOFT**

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal **FRST**

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial **FST**

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Fuel Storage Tank - Historic:

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Greenhouse Gas Emissions from Large Facilities:

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2017

TSSA Historic Incidents:

Provincial

[HINC](#)

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial

[INC](#)

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Landfill Inventory Management Ontario:

Provincial

[LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Canadian Mine Locations:

Private

[MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial

[MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

National Analysis of Trends in Emergencies System (NATES):

Federal

[NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial

[NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2018

National Defense & Canadian Forces Fuel Tanks:

Federal

[NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

[NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal

[NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

[NEBI](#)

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Mar 31, 2020

National Energy Board Wells:

Federal

[NEBP](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jun 2020

Inventory of PCB Storage Sites:

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Ontario Regulation 347 Waste Receivers Summary:

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Sep 2020

Retail Fuel Storage Tanks:

Private RST

Wastewater Discharger Registration Database:

Provincial [SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2017

Anderson's Storage Tanks:

Private [TANK](#)

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal [TCFT](#)

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2018

Variances for Abandonment of Underground Storage Tanks:

Provincial [VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Waste Disposal Sites - MOE CA Inventory:

Provincial [WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Sep 30, 2020

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial [WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30th, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial [WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Apr 30, 2020

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

Provincial

[AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

[AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2019

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial

[AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jun 30, 2020

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Environment and Climate Change Canada cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: Jan 2004-Dec 2017

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Jun 30, 2020

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 - Jun 2020

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Dec 2019

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Sep 30, 2020

Drill Hole Database:

Provincial [DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2019

Delisted Fuel Tanks:

Provincial [DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Jul 31, 2020

Environmental Activity and Sector Registry:

Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Sep 30, 2020

Environmental Registry:

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Sep 30, 2020

Environmental Compliance Approval:

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Sep 30, 2020

Environmental Effects Monitoring:

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jul 31, 2020

Environmental Issues Inventory System:

Federal [EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial **EMHE**

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report:

Provincial **EPAR**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land / water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2019

List of Expired Fuels Safety Facilities:

Provincial **EXP**

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Federal Convictions:

Federal **FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal **FCS**

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Apr 2020

Fisheries & Oceans Fuel Tanks:

Federal **FOFT**

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal **FRST**

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial **FST**

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Fuel Storage Tank - Historic:

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jul 31, 2020

Greenhouse Gas Emissions from Large Facilities:

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2017

TSSA Historic Incidents:

Provincial

[HINC](#)

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial

[INC](#)

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Landfill Inventory Management Ontario:

Provincial

[LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations:

Private

[MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial [MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2020

National Analysis of Trends in Emergencies System (NATES):

Federal [NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial [NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2018

National Defense & Canadian Forces Fuel Tanks:

Federal [NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal [NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal [NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal [NEBI](#)

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Mar 31, 2020

National Energy Board Wells:

Federal [NEBP](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Aug 31, 2020

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jun 2020

Inventory of PCB Storage Sites:

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Sep 30, 2020

Canadian Pulp and Paper:

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Sep 30, 2020

Pipeline Incidents:

Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

The coronavirus pandemic is cited by the agency responsible for tank regulations and data as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: Feb 28, 2017

Private and Retail Fuel Storage Tanks:

Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Sep 30, 2020

Ontario Regulation 347 Waste Receivers Summary:

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Sep 2020

Retail Fuel Storage Tanks:

Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jun 30, 2020

Scott's Manufacturing Directory:

Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial SPL

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: 1988-Nov 2019

Wastewater Discharger Registration Database:

Provincial [SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2017

Anderson's Storage Tanks:

Private [TANK](#)

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal [TCFT](#)

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2018

Variations for Abandonment of Underground Storage Tanks:

Provincial [VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Waste Disposal Sites - MOE CA Inventory:

Provincial [WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Sep 30, 2020

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial [WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30th, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial [WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Apr 30, 2020

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Investigation/Action/Status

Chris Lansley from Enersource reported the removal and replacement of two hydro vaults from 2335 Hensall Street and 444 Abruz Blvd, Mississauga. These were also reported by Mark from SAC, for follow up. The Hensall site may have lost up to 152 litres of PCB contaminated oil of 11.1 mg/l, and the Abruz site may have lost 27 litres with a concentration of 57.4 mg/l. The sites were both repaired and there was no visible spill. Amec was hired to do the follow-up testing for soil contamination and follow up with Enersource and MOE.

Investigation/Action/Status

While a construction crew was digging to install a sanitary service for the hospital expansion they noticed the trench filling with redish purple diesel fuel. Mississauga Fire responded and they notified the Region. About 5 feet to the east of the trench sat an underground 45000 litre heating oil tank for the hospital. It was suspected that the tank somehow got damaged. The hospital hired Fielding Environmental to clean up the spill. Some of the spill got into the new sanitary sewer line. Fielding placed a plug in the sewer to stop the fuel from getting into the sanitary sewer. The Hospital hired Macviro Investigative Engineering Inc. to aid in the clean up of the underground spill. The clean up is on going and could be extensive. TSSA and MOE were also involved and both responded.

Investigation/Action/Status

A truck had its tank punctured on the QEW and came to stop on Queensway just west of Cawthra Road.

The truck lost approximately 200 litres of diesel, but the driver used logs and dirt to contain most of it on the street. The driver hired Team One to clean the spill. They swept the road and pumped out the catch basin and the tank. I updated SAC and left to another spill once Team One began the clean up.

I checked and found no effect on the Cooksville Creek.

TECHNICAL MEMO

For the purposes of site and neighbouring property description, the direction “north” refers to true north.

Site 01B

Position Relative to Site	Neighbouring Lands Description
North	Vacant green space and the Etobicoke Creek channel. To the north and northeast is a multi-building medical complex and commercial lands including Trillium Health Partners, Betty Wallace Women’s Health Centre and additional medical and commercial establishments.
East	Vacant greenspace with pedestrian walking paths and trails (some paved).
South	Vacant greenspace. Further to the south are residential properties.
West	Vacant greenspace. Further to the west are residential properties.

Site 02B

Position Relative to Site	Neighbouring Lands Description
North	Vacant green space and the Etobicoke Creek. Further to the north are commercial, industrial as well as vacant (with some signs of disturbance/clearing or gradient as observed on aerial photography) properties. The commercial/industrial properties further to the north are considered to be located hydraulically separate from the subject site, as they are located on the opposite side of Etobicoke Creek.
East	Vacant lands, overgrown with vegetation and trees and Etobicoke Creek.
South	The Queensway East road allowance and aboveground hydro corridor. Further to the south are residential properties.
West	Paved roadway and commercial properties including: Pace Filtration, AV-Canada, Otis Canada Inc.

Site 03A

Position Relative to Site	Neighbouring Lands Description
North	2301 Dixie Road manufacturing building. Further north of the site are additional commercial and industrial properties including 2365 Dixie Road property, which could not be identified at the time of the site visit. Based on an online search and City Directory records this property is reported as Dixie Film Studios. Historically this property was occupied by Cryovac Canada Inc. (2000, 1989, 1981, 1970/71), Davison Grace & Co./Grace & Co. of Canada/Grace Computer Services/Grace Containers Ltd. (1989, 1970/71) and Davison Chemical Div. Grace Chemicals (1981). Further to north is 2401 Dixie Road – a vacant property, which in the City Directory records was listed in 1989 as BBC Brown Boveri Canada Inc. (based on online search this company produced various electrical equipment including motors, generators, turbines, transformers), ITE Industries (1981), Eastern Power Devices (1970/71),

	Quality Brass Foundry (1958). To the northeast are commercial properties including Fed-EX Shipping Centre which was listed in the ERIS report for records of fuel storage.
East	Queensway right-of-way, aboveground hydro corridor and residential properties further to the east.
South	Queensway/Dixie Road intersection right-of-way. Further to the south are residential properties and a dental office.
West	Commercial plaza including 2276 – 2290 Dixie Road (motorcycle and pre-owned auto sales, grocery store and restaurant, as well as BMX bike shop). Further to the west and north west are commercial and industrial properties including auto repair shops, and Samuel Son & Co. (integrated metal manufacturing, processing and distribution).

Site 06A

Position Relative to Site	Neighbouring Lands Description
North	755 Queensway - a multi-building/multi-tenant commercial complex including restaurants, law office, banquet hall, dance/sport studio. Further north and northwest of the site are additional commercial and industrial properties. Approximately 250 m to the northeast is 2300 Haines Road (Auto Truck Group, a commercial truck repair shop), as well as 2350 Haines Road, an auto repair shop.
East	Queensway right-of-way, aboveground hydro corridor and residential properties further to the east.
South	Queensway/Cawthra Road intersection right-of-way. Further to the south are residential properties.
West	655 Queensway multi-building commercial plaza including Petro Canada gasoline service station (approximately 75 m to the west), an auto repair shop, a car wash and an oil change shop.

Site 07A

Position Relative to Site	Neighbouring Lands Description
North	Tedlo Street right-of-way and 563 Queensway E. occupied by Acorn Packaging and Xtile Canada. Further to the north and northwest are commercial establishments including Peel Regional Paramedic Services Station and a Dance Studio.
East	Queensway right-of-way, aboveground hydro corridor. East of Queensway is the Mohawk Park Tennis Club property and further to the east are residential properties.
South	Queensway right-of-way. Further to the south are residential properties.
West	505 Queensway - a multi-tenant commercial building including home improvement (tile, flooring) and sporting goods stores, architect's office and catering establishments. Further to the northwest are additional commercial properties including flooring and textile stores, FMAV media company and additional commercial establishments.

Site 08B

Position Relative to Site	Neighbouring Lands Description
North	Hensall Street right-of-way and residential properties. Further to the north is 505 Queensway, a multi-tenant commercial building including home improvement (tile, flooring) and sporting goods stores, architect's office and catering establishments
East	Queensway and Hensall Street intersection. Further to the east are residential properties.
South	Queensway right-of-way. Further to the south are residential properties.
West	Residential properties.

Site 09C

Position Relative to Site	Neighbouring Lands Description
North	Cliff Road right-of-way and residential properties.
East	Queensway and Cliff Road intersection and further to the east are residential properties.
South	Queensway right-of-way. Further to the southeast are residential properties, and to the south is St. Timothy Elementary School.
West	Residential properties.

Site 10C

Position Relative to Site	Neighbouring Lands Description
North	Residential properties.
East	Queensway right-of-way and further to the east are two public school properties.
South	Queensway and Camilla Road intersection. To the southeast is the Apple Market – a grocery store.

REGION OF PEEL

WASTEWATER CAPACITY IMPROVEMENTS IN CENTRAL MISSISSAUGA

Environmental Site Assessment (ESA) Reports

Phase Two (Queensway East and Dixie Road)

Prepared By:

Phase Two Environmental Site Assessment

2247 and 2251 Dixie Road, Mississauga, ON

GMBP File: 718018

November 30, 2021

EXECUTIVE SUMMARY

GM BluePlan Engineering Limited (GM BluePlan) was retained by the Region of Peel to complete a Phase Two Environmental Site Assessment (ESA) on the property located at 2247 and 2251 Dixie Road in Mississauga, Region of Peel, Ontario. The Phase Two property is approximately 0.18 hectares (ha) (0.45 acres (ac)) in size and is located on the southeast corner of the intersection of Queensway East and Dixie Road in Mississauga.

The Site is currently owned by Regional Municipality of Peel and is currently vacant of structures. This Phase Two ESA was conducted as due diligence to support the Municipal Class Environmental Assessment (MCEA) for the Wastewater Capacity Improvements Project in Central Mississauga.

A Phase One ESA was completed for the Phase Two property by GM BluePlan (dated November 2020). Based on the findings of the Phase One ESA, the following Areas of Potential Environmental Concern (APECs) and the associated Contaminants of Potential Concern (COPCs) were identified, as follows:

- Fuel Tanks at nearby locations
 - Potentially affected media: groundwater
 - COPCs: benzene, toluene, ethylbenzene and xylenes (BTEX), petroleum hydrocarbons (PHCs) F1 fraction
- Imported fill of unknown quality
 - Potentially affected media: soil
 - COPCs: metals, polycyclic aromatic hydrocarbons (PAHs)
- Various industrial activities at adjacent property (e.g., battery manufacture, electrical transformers, metal fabrication)
 - Potentially affected media: soil and groundwater
 - COPCs: volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), metals, PHCs F1

The subject property and the immediate surrounding properties are serviced by the municipal water service provided by the Region of Peel, which uses surface water as a source for municipal drinking water. Therefore, the Table 3, non-potable groundwater setting criteria of the Soil, Ground Water, and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act (April 15, 2011), under O. Reg. 153/04 (as amended) have been considered applicable. Additionally, the coarse textured soil criteria with an Industrial/Commercial/Community Use property use have been selected as the Standard for the purposes of the Phase Two ESA.

The investigation included the advancement of a total of four (4) boreholes. Three (3) of the boreholes were drilled and sampled up to a maximum depth of 5.18 metres below ground surface (mbgs) in the overburden and were completed as monitoring wells to a maximum depth of 4.73 mbgs. The fourth borehole was drilled through the overburden and cored through the shale bedrock to a depth of approximately 22.86 mbgs with a monitoring well installed to a depth of 21 mbgs at this location.

Soil samples were collected from the vicinity of the water table to investigate the potential for impacts from off-Site sources, as well as from shallow soils to investigate the quality of shallow soils on-Site. Groundwater samples were collected from all monitoring wells to investigate the potential for impacts from neighbouring upgradient industrial activities.

No evidence of PHC impact was identified in the groundwater and no field evidence of impact was detected based on soil screening during drilling at locations of the investigative boreholes. Based on results of laboratory analysis of the select soil samples, exceedances of the Standard were reported at two (2) locations:

- One (1) sample from location BH/MW-1 exceeded the Standard for SAR, which is considered to be potentially related to de-icing activities on nearby roadways.
- One (1) sample from location BH/MW-4 exceeded the Standard for lead.

While the origin of the lead exceedance is unknown, it may be related to historic placement of fill of suspect origin. This exceedance is considered to be isolated in nature, as the remainder of the soil samples from the other borehole locations contained concentrations of lead well below the applicable MECP Standard.

Based on the nature and occurrence of the elevated levels of lead and SAR in soil, the potential for environmental risk or impact to the subject property is considered to be low. However, these impacts will need to be considered should excess soils from the Site require off-Site disposal or re-use as part of future shaft construction at the Site. The soil disposal and re-use options will need to be considered based on the receiving site's requirements and in accordance with Ontario Regulation 406/19 for the purpose of excess soil management.

Groundwater quality samples were collected from all four (4) monitoring wells. At the location of BH/MW-1, the concentrations of VOCs: cis-1,2-dichloroethylene and trichloroethylene were reported to exceed the selected Standards for these parameters. Further, at the location BH/MW-4, the well screened within the shale bedrock, the concentration of sodium was reported above the Standard for this parameter. The origin of the VOC exceedances in groundwater is unknown, as there are no reported historical records of chlorinated solvent use on-Site (based on inferred historical residential use), however it is inferred that it may be related to historical industrial activities on lands upgradient of the Site. Elevated sodium levels in groundwater are inferred to be related to the mineral content of the shale bedrock and potentially to road de-icing activities.

Based on consideration of the Site as a future shaft location for the proposed wastewater system upgrades, the construction methodology should seek to exclude groundwater from the excavation (e.g., through the use of appropriate shoring) to minimize the required intensity of construction dewatering. Laboratory analyses indicates that groundwater on-Site meets the standards set by the Region of Peel sewer use by-law for both sanitary and storm sewer discharge for the select analyzed parameters but due to detections of certain VOC parameters at concentrations near the storm sewer standards, the sanitary sewer may be the preferred discharge location for construction dewatering.

PHASE TWO ENVIRONMENTAL SITE ASSESSMENT

NOVEMBER 30, 2021

GMBP FILE: 718018

1. INTRODUCTION

1.1 Site Description

GM BluePlan Engineering Limited (GM BluePlan) was retained by Region of Peel (the Region) to undertake a Phase Two Environmental Site Assessment (ESA) at a property located at 2247 and 2251 Dixie Road in Mississauga, Region of Peel, Ontario (hereafter referred to as Phase Two property/Site/Site 03D). The location and layout of the Phase Two property is presented in Figure 1 and 2.

The Phase Two property is irregular in shape, is approximately 0.18 hectares (ha) (0.45 acres (ac)) in size and is located on the southeast corner of the intersection of Queensway East and Dixie Road in Mississauga (see Figure 1) in a residential, commercial and industrial land use setting. The Site is currently owned by Regional Municipality of Peel and is currently vacant of structures.

2. BACKGROUND

GM BluePlan was retained by the Region to prepare a Municipal Class Environmental Assessment (MCEA) for the Wastewater Capacity Improvements in Central Mississauga (the Project, Region project number 2018-731P). Findings made in the Project technical studies led to the relocation of one of the shaft sites of the preferred solution due to potential for environmental impacts at the original location (shaft Site 03A). The Phase Two property is the relocated shaft Site 03D (the Site), as shown on Figure 2.

In November 2020, GMBP completed a Phase One ESA at the original shaft Site 03A, which is located north or upgradient of the Phase Two property, on the north side Queensway East as shown on Figure 2. Based on the findings of that Phase One ESA, the following Areas of Potential Environmental Concern (APECs) were identified for Site 03A. The APECs and the associated Contaminants of Potential Concern (COPCs) were identified as follows:

- Fuel Tanks at nearby locations
 - Potentially affected media: groundwater
 - COPCs: benzene, toluene, ethylbenzene and xylenes (BTEX), petroleum hydrocarbons (PHCs) F1 fraction
- Imported fill of unknown quality
 - Potentially affected media: soil
 - COPCs: metals, polycyclic aromatic hydrocarbons (PAHs)
- Various industrial activities at adjacent property (e.g., battery manufacture, electrical transformers, metal fabrication)
 - Potentially affected media: soil and groundwater
 - COPCs: volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), metals, PHCs F1

After the Phase One ESA report was completed, a historical “Environmental Soil and Groundwater Investigation” report (Coffey 2010) was recovered from the Region archives. The Coffey report (2010) describes the results of an intrusive investigation at locations near Site 03A, apparently confirming the presence of the following types of environmental impacts in the vicinity of Site 03A:

- Exceedances in Soil: SAR
- Exceedances in Groundwater: VOCs, chloride.
- Detected in Groundwater: PHCs F3.

The proposed shaft was therefore proposed to be relocated from Site 03A to the location of Phase Two property, or Site 03D (i.e., to the southeast corner of Queensway and Dixie), in light of the findings of the Phase One ESA report and the Coffey report (2010). Based on the findings of the Phase One ESA, as well as the findings of the 2010 Coffey report, which identified impacts upgradient of the Site 03D, a Phase Two ESA was recommended to be conducted on the subject Site.

This Phase Two ESA included a drilling investigation and subsequent soil and groundwater sampling to investigate the identified APECs. The Phase Two ESA was completed to assess the environmental condition of the subsurface soils and groundwater related to the APECs identified based on the findings of the 2020 GM BluePlan Phase One ESA and the 2010 Coffey report. The Phase Two ESA investigation was undertaken to further reduce the uncertainty with respect to the environmental condition of the subsurface soil and groundwater conditions at the Phase Two property.

It is our understanding that the Phase Two ESA is being completed as due diligence to support the MCEA for the Region Project. Further, it is our understanding that this Phase Two ESA is not being completed to support a Record of Site Condition (RSC) under Ontario Regulation (O. Reg.) 153/04 (as amended). The Phase Two Environmental Site Assessment was completed in general accordance with CSA Standard CAN/CSA Z769-00.

2.1 Property Ownership

The Phase Two property is currently owned by Regional Municipality of Peel.

2.2 Current and Proposed Future Uses

The Phase Two property is currently vacant of structures. Based on the review of historic aerial photographs (City of Mississauga 2021), the Site was historically under what appears to be residential use. The Site is proposed to be used as a future shaft location for proposed wastewater system upgrades in the vicinity of the Site.

2.3 Applicable Site Condition Standard

For the purpose of the Phased ESA, impacts to the Phase Two property are determined by comparison to the criteria identified in the Soil, Groundwater, and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act (April 15, 2011), under Ontario Regulation (O. Reg.) 153/04 (as amended), hereafter referred to as the Standard.

In determining the applicable regulatory criteria of the Standard, the property use, groundwater scenario, and soil texture must be selected.

A review of Site conditions indicates the following:

1. The Phase Two property is located within the City of Mississauga, where municipal water is supplied from a surface water source (i.e., Lake Ontario).
2. The municipal water system is available to properties within 300 m of the Phase Two property including the Phase Two property.
3. The depth of overburden on the subject property is greater than 2.0 metres, and therefore, the Phase Two property is not considered a shallow soil property.
4. No watercourses or surface water bodies were noted within 30 metres of the Phase Two property.

As part of the determination of the soil Standards under O.Reg. 153/04 (as amended), the soil must be defined as “fine and medium textured” or “coarse textured” based on site conditions. By definition, coarse textured soils contain more than 50 percent by mass of particles greater than or equal to 75 µm in diameter. Based on the occurrence medium to coarse sand in the near the groundwater table at the Phase Two property, the Site soils are classified as “coarse textured”.

Therefore, the Table 3 Standard (i.e., for a non-potable groundwater scenario) for coarse textured soils with an Industrial/Commercial/Community Use has been selected as the Standard for the purposes of the Phase Two ESA.

To further support project planning, groundwater quality results were also compared to the standards in the Region of Peel Sewer Use By-Law (#53-2010) for sanitary and storm sewers. This has been provided with the expectation that some level of construction dewatering may be required to support the project and that the sanitary and/or storm sewers may be potential receivers of discharge from the construction dewatering activity.

3. SCOPE OF INVESTIGATION

3.1 Overview of Site Investigation

The Phase One ESA completed by GM BluePlan on the original proposed shaft location Site 03A, which is inferred to be located upgradient of the Phase Two property, concluded that a Phase Two ESA would be required due to potential for off-Site impacts. Though the proposed location of the shaft was changed from Site 03A to Site 03D, because 03D is inferred to be downgradient it was decided that a Phase Two ESA should still be undertaken.

The Phase Two ESA investigation was undertaken following completion of public and private utility locates. The investigation included the advancement of three (3) boreholes that were drilled in the overburden and sampled to a maximum depth of approximately 5.18 metres below ground surface (mbgs). An additional borehole (BH/MW-4), was drilled into bedrock to a depth of approximately 22.86 mbgs. The four (4) boreholes were completed as monitoring wells: overburden wells to a maximum depth of approximately 4.73 mbgs, and the bedrock well to approximately 21.0 mbgs.

In general, the Phase Two ESA activities included:

- Completion of public and private utility/service clearances,
- Completion of four (4) boreholes by a licensed well contractor utilizing a Hollow Stem/Solid Stem Auger (HSA/SSA) drilling rig to a maximum depth of 22.86 mbgs,
- Installation of four (4) monitoring wells within the boreholes,
- Collection of select soil and shale bedrock samples from the boreholes for field screening and laboratory analysis,
- Collection of groundwater samples from four (4) monitoring wells at the Site,
- Analyses of selected soil and groundwater samples by an accredited laboratory for identified potential contaminants of concern (PCOCs),

- An elevation and location survey of boreholes and monitoring wells, and,
- Data interpretation and reporting.

3.2 Media Investigated

As described in the sections below, to investigate the APECs at the Phase Two property, a drilling investigation program was completed to assess the surface and sub-surface soils and the shallow groundwater conditions on, and under the Phase Two property.

Based on the records of fuel storage tanks and various industrial activities including battery manufacturing, electrical transformers and metal fabrication at neighbouring properties as well as records of previously identified impacts in groundwater (Coffey 2010) at neighbouring upgradient properties, the potential media affected associated with these APECs is considered to be groundwater.

Based on potential presence of imported fill of unknown quality at the Site, the potential media affected associated with this APEC is considered to be soil.

No sediment sampling occurred as no surface water features (and thus no sediment) is present at the Phase Two ESA property.

3.3 Impediments

No impediments or denial of access were experienced during the completion of this Phase Two ESA that would compromise the findings or results.

4. INVESTIGATION METHOD

4.1 General

Prior to initiating on-Site intrusive activities, subsurface utility locates were requested by GM BluePlan personnel and were completed by the local utilities, or their representatives. Private utility locates were also completed by Landshark Locates on October 21, 2021.

The advancement of boreholes was completed by Landshark Drilling Inc., a Ministry of the Environment, Conservation and Parks (MECP) licenced drilling contractor on October 26 to 28, 2021. Borehole/monitoring wells locations are shown on Figure 2.

The methodology with respect to the soil and groundwater investigations, including the sampling program were conducted with reference to the Ontario Ministry of Environment, Conservation and Parks document "*Guidance on Sampling and Analytical Methods for Use at Contaminated Sites in Ontario*" dated December 1996 and the MECP's "*Protocol for Analytical Methods Used in the Assessment of Properties under Part XV.1 of the Environmental Protection Act*," dated March 9, 2004 amended as of July 1, 2011 (Protocol). Chemical analyses were completed by an accredited laboratory and reported to be performed in accordance with O. Reg. 153/04 (as amended).

4.2 Drilling Investigation

On October 26 to 28, 2021, borehole advancement and monitoring well installations were completed by Landshark Drilling Inc. of Brantford, Ontario (MECP license #7464) using a Mobile B57 auger drilling rig utilizing 0.2/0.1 m outside diameter, hollow stem augers (HSA)/solid stem augers (SSA) (for select boreholes), respectively. A total of four (4) boreholes (BH/MW-1, BH/MW-2, BH/MW-3 and BH/MW-4) were advanced and overburden was sampled to depths of up to approximately 5.18 mbgs. The overburden boreholes were completed with the installation of groundwater monitoring wells within each respective borehole to a maximum depth of approximately 4.73 mbgs (refer to Table 1 and borehole logs in Appendix A for well details). An additional

borehole was advanced into the shale bedrock using HQ triple tube core barrel (0.1 m outside diameter) method to a depth of approximately 22.86 mbgs, with a monitoring well installed in this borehole to a depth of approximately 21.0 mbgs. Monitoring well and borehole locations are shown on Figure 2.

Standard 0.6 m long split-spoon samplers were used to retrieve depth discrete soil samples at each borehole location in order to assess the environmental condition and quality of the soils using industry practiced protocols.

During the subsurface investigations, the nature and occurrence of the various soil types within each borehole and shale bedrock core were visually inspected and documented. Details of the subsurface soil conditions are presented on the appended borehole logs included in Appendix A. Select photographs taken during the subsurface investigation are provided in Appendix B.

For soil samples collected, dedicated nitrile disposable gloves, laboratory supplied jars, and/or laboratory supplied volume specific syringe samplers (sample dedicated) were used for each sample collected.

4.3 Soil Sampling

The boreholes were advanced with Mobile B57 auger drilling rig with hollow and solid stem augers. Soil samples were collected using standard 0.6 m long split-spoon samplers. As each split-spoon was collected, standard washing and decontamination procedures were completed by the drilling contractor prior to use of the split spoon samplers in the subsequent intervals.

Soil samples were logged for geologic, visual, olfactory and textural details using GM BluePlan's standard field borehole log forms during the advancement of boreholes.

Recovered soil was sampled for VOCs and PHCs, including BTEX and the F1 fraction of PHCs, using laboratory supplied, sample dedicated, sampling syringes and methanol vials. Collected plugs of soil (~5 grams) were deposited into pre-preserved laboratory supplied sample vials.

Sample jars submitted for the analysis of F2 to F4 fractions of PHCs, PCBs, PAHs and moisture content were filled to minimize head space using the laboratory supplied 120-mL glass jar with a Teflon lined lid and no sample preservative. The soil samples submitted for analysis of metals and inorganics were collected and placed into laboratory supplied 120- or 250-mL jars (based on volume of retrieved sample). Soil was placed directly into jars to minimize soil sample disruption. Where the retrieved split spoon sampler was empty for a given interval, soil samples were collected from auger cuttings from the approximate interval, as necessary. During soil sampling, a blind field duplicate was submitted for Quality Assurance and Quality Control (QA/QC) measures. Samples were kept in coolers with ice and/or ice packs and in refrigerator prior to delivery to Bureau Veritas laboratory.

Selected soil samples were submitted for analysis and extracted at the laboratory within the required timeframes. The remaining portion of the collected soil sample was placed in a clear, sample dedicated, sampling bag for vapour screening/logging.

The stratigraphy encountered in the boreholes generally consisted of silty sand overlying medium to coarse sand with trace to some gravel and trace silt, underlain by shale bedrock (Appendix A).

4.4 Analytical Testing

Bureau Veritas laboratory (BV) of Mississauga, Ontario was the environmental laboratory selected to complete the analysis of soil and groundwater samples submitted during this Phase Two ESA process. BV is an accredited environmental laboratory and is certified with the Canadian Association for Laboratory Accreditation for all parameters analyzed in the course of completing this Phase Two ESA.

4.5 Field Screening Measurements

During the advancement of the boreholes, following collection of soil samples for laboratory analysis, remaining soils from within the split spoon sampler or auger cuttings (where split spoon was empty), were placed into sample dedicated sealable plastic bags for the purpose of field screening. Headspace vapour analysis of selected borehole soil samples was conducted using a MiniRae 2000 Photo Ionization Detector (PID), a field-screening tool, which is used to analyze soil samples for presence of PHCs and VOCs. These units have an accuracy of +/- 10% of the recorded reading for measurements between 0 and 10,000 parts per million.

Prior to use in the field, the PID was calibrated to the Manufacturer's specifications with default alarm limits and the sensor pre-calibrated with a standard calibration gas. During the advancement of the boreholes, the ambient weather conditions were observed to be overcast with rain on October 26, and sunny and clear on October 27 and 28, 2021. Details of the field screening measurements encountered in the boreholes are presented on enclosed borehole logs (Appendix A).

Results of field screening along with visual and olfactory observations of soil samples were taken into consideration when determining which samples to submit to the laboratory for analysis. Samples with field-identified evidence of impact were targeted for analysis. During this investigation, generally no evidence of impact (PHC/VOC) was identified by vapour field screening and visual observation of soil samples retrieved from the boreholes. At the investigated locations, samples were selected based on nature of media and sample depths and for general screening.

4.6 Ground Water: Monitoring Well Installation

As previously described, the drilling was completed by Landshark Drilling Inc., using a Mobile B57 auger drilling rig. Following the advancement of boreholes to depth, the four (4) boreholes (BH/MW-1 to BH/MW-4) were constructed with 0.05m diameter PVC monitoring wells that extended below ground level and were fitted with caps (j-plugs) and lockable aboveground protective casings. The monitoring wells were completed with a sand filter pack placed around the screened interval and extending to approximately 0.3 m above the top of the screened well sections. A bentonite seal was installed above the filter pack in each well location. Well installation details are provided in the borehole logs in Appendix A.

The monitoring wells were purged and developed following installation. On November 2, 2021, all four (4) monitoring wells were purged to additionally develop the wells ahead of low flow sampling. New, well-dedicated Waterra® inertial pumps (foot valves) and low- or high-density polyethylene (LDPE) tubing with an inside diameter of 12.7 mm (0.5 in) were installed in each well for the development and purging of the monitoring wells. Prior to purging, static water levels in the monitoring wells were measured using a Solinst Interface Meter (Instrument ID 24588) water level tape to determine well volume. The Interface Meter also allowed for the detection and measurement of free product (potential presence of PHCs). To develop the monitoring wells, a minimum of three (3) well volumes (and more at most locations) of water was removed from each well. Where the monitoring well went dry (BH/MW-2), the well was purged dry several times during well development and prior to sampling.

No evidence of free product (i.e., oil sheen) was identified during purging and sampling and no free product was measured using the Interface Meter.

The monitoring well construction details and elevations are presented in Table 1 and on borehole logs in Appendix A.

4.7 Ground Water: Field Measurement and Water Quality Parameters

On November 2, 2021 groundwater sampling was completed with the use of well-dedicated 6.35 mm diameter LDPE tubing and a low flow peristaltic pump in the overburden wells (BH/MW-1 to BH/MW-3) in order to minimize sediment within the groundwater samples for all sampled parameters as part of this monitoring program. At the

bedrock well, due to challenges with installing peristaltic pump tubing at the depth of the well screen, this well was sampled with inertial pump (foot valve) method.

In order to add further certainty of the well development prior to sampling, a YSI 556 multi-parameter digital field sampling unit (Instrument ID 28176) that was calibrated prior to use, was used to record water quality parameters including temperature, conductivity, pH, dissolved oxygen and oxidation-reduction potential (ORP). The well was considered to be developed and samples were collected when the field parameters stabilized. Where well went dry during purging or low flow sampling (i.e., BH/MW-2), the well was allowed to recharge with fresh groundwater prior to collecting samples.

4.8 Groundwater: Sampling

Groundwater sampling consisted of the use of dedicated 6.35 mm diameter LDPE tubing and a low flow peristaltic pump (BH/MW-1 to BH/MW-3) or with inertial pump (foot valve) method (BH/MW-4). Samples were collected in general conformance with EPA Method EQASOP GW-001 (revised January 19, 2010). Groundwater samples were placed directly into laboratory prepared bottles containing laboratory added preservative, where required, and submitted under standard chain of custody protocols for laboratory analysis. During groundwater sampling, a trip blank and a blind field duplicate were submitted for QA/QC measures. Samples were kept in coolers with ice and/or ice packs prior to delivery in person to BV laboratory under standard Chain of Custody protocol.

4.9 Elevation Surveying

The monitoring well and borehole locations were surveyed by GM BluePlan relative to the elevation of a nearby temporary benchmark set at the southwest corner of curb at 2239 Dixie Road property.

The elevations of the top of casing and ground surface at the monitoring wells were measured using a laser level surveying equipment by GM BluePlan survey crew. Elevations were measured to a reference point on the top of casing (TOC) at monitoring wells. Location of each monitoring well and borehole was measured with GPS surveying equipment. The elevations are presented in Table 1 and on the individual borehole logs.

4.10 Quality Assurance and Quality Control Measures

Sampling containers were prepared and supplied by BV laboratory and transported to the GM BluePlan Guelph office by BV laboratory delivery service in sealed plastic coolers. The sample containers for each suite of parameters were laboratory prepared as required by the Protocol.

Soil samples for BTEX and the F1 fraction of PHCs were collected and prepared for analysis using laboratory supplied, sample dedicated syringes to collect plugs of soil (~5 grams) and were deposited into laboratory supplied, pre-weighed 40 mL vials with 10 mL of purge and trap grade methanol for preservation following sample collection. Placement of soil plugs into the methanol vials was conducted to prevent volatile losses and care was exercised in order to avoid spillage of methanol preservative from within the vials to maintain an unchanged volume of methanol inside the vial.

Sample jars submitted for the analysis of F2 to F4 fractions of PHCs, PCBs and PAHs were filled to minimize head space using the laboratory supplied 120 ml clear glass jar with a Teflon lined lid and no sample preservative.

Soil sample jars for metals and inorganics consisted of one (1) 120- or 250-mL clear glass jar with a lid and no sample preservative.

Groundwater sample containers consisted of two (2) 100 mL amber glass bottles, with three (3) 40 mL glass vials containing sodium bisulfate preservative for each CCME PHCs and VOC analysis. Sample containers for PCBs consisted of two (2) 250 mL amber glass bottles with no sample preservative.

Soil and groundwater samples were collected using industry accepted protocols and placed in the laboratory supplied containers. Collected samples were packaged in laboratory supplied coolers with ice and ice packs or stored in a refrigerator and delivered in person or by laboratory delivery service to the BV laboratory in Mississauga, ON for analysis under standard Chain of Custody protocols.

Soil field duplicate samples were collected for QA/QC purposes. The field duplicate is intended to assess the reproducibility of analytical results. Similarly, field duplicate groundwater samples were collected for identified contaminants of concern, as was a trip blank for the analysis of VOCs. There were no QA/QC concerns specifically identified based on reported results of original, duplicate or trip blank samples.

The laboratory Certificates of Analysis are considered to conform to the requirements of O. Reg. 153/04 subsection 47(3). Copies of the certificates of analysis for soil and groundwater are provided in Appendix C.

Soil and groundwater samples were collected using sample-dedicated, disposable nitrile gloves and individual sample containers. Groundwater samples were collected using dedicated sampling and purging equipment. Any equipment that was used across sample locations (i.e., water level tape/interface probe) was washed using a three-part wash process (water with detergent and two potable (distilled) water rinses) to reduce the likelihood of cross contamination between sample locations.

5. REVIEW AND EVALUATION

5.1 Physical Setting

Topographically, the Site is at similar grades as adjacent properties and slightly elevated compared to the adjacent right-of-ways; the Site is gently undulating. Based on the physiographic and quaternary mapping, the Site is located in the physiographic region known as the Iroquois Plain and within the Sand Plains physiographic landform described as a patchwork of coarse-textured glaciolacustrine, fine-textured glaciolacustrine, clayey-till and sandy till (Chapman and Putnam 1984; Ontario Geological Survey 2010).

Surficial geological mapping indicates that the Site and the vicinity are underlain by deltaic and lacustrine deposits which are described as sandy-gravelly to sandy-silty soils laid down in the bed of glacial Lake Iroquois or in deltas of influent streams. Bedrock in the vicinity of the Site is the shale-rich Georgian Bay Formation.

From the review of select Ministry of the Environment, Conservation and Parks (MECP) well records in the vicinity of the Site, the overburden soils are reported to consist of sand/coarse sand; sand and silt; sand and gravel underlain by silt and clay; sand underlain by clay. The overburden deposits are reported as overlying weathered grey shale deposits. Overburden thickness is reported as less than 5 mbgs at some locations in Site vicinity.

Shallow groundwater flow often correlates to topographical features and groundwater typically flows towards nearby lakes, streams, and wetland areas, except where modified by utility and service trenches. Based on the overall local topography and water bodies in the Site vicinity, the shallow groundwater flow direction in the overburden is inferred to be in a southeasterly direction toward Lake Ontario, though flow directions may vary in areas close to riparian areas and watercourses, such as the nearby Etobicoke Creek and Cooksville Creek, located approximately 1.3 km east and 3.8 km west of the Site, respectively.

This Phase Two ESA investigated the upper overburden including the shallow unsaturated soils and the upper shale bedrock. The boreholes extended from the ground surface, at a maximum elevation of approximately 112.43 masl, to a maximum depth of 22.86 mbgs (or an elevation of 91.03 masl). The soil profile is considered to consist primarily of silty sand overlying medium to coarse sand with trace to some gravel and trace silt, underlain by grey shale bedrock.

5.2 Field Observations

During the drilling investigation, no evidence of PHC or VOC impact was identified by visual observation (i.e., no PHC film or sheen was observed) or vapour field screening of the retrieved soil samples. Field screening for organic vapours yielded measurements that were generally less than 5 parts per million (ppm) in the samples selected for screening and no noticeable PHC odours were detected. Detected relatively low PID readings are generally encountered in soils where there is some degree of moisture present in the soil sample.

Suspect or deleterious fill material was not encountered during drilling, however, at the location of BH/MW-4, slightly darker topsoil/underlying shallow soil was observed during drilling. Field screening with the PID did not indicate PHC/VOC vapours in the retrieved soil samples from these locations. Deleterious materials such as ash, slag, coal, or other indicators of fill of industrial origin, were not encountered at this or other investigated locations at the Site.

No visual observation of PHC impact (i.e., PHC film or sheen) was observed and there was no detection of free product with the interface probe at the groundwater table.

5.3 Groundwater: Elevations and Flow Direction

The groundwater monitoring wells installed during this Phase Two ESA were placed in locations to gain representative data from the Phase Two property, to ascertain the existing groundwater conditions at the downgradient locations of the identified off-Site industrial activities and to determine the local shallow groundwater flow direction.

Groundwater elevations were measured on November 2, 2021 prior to well purging. The groundwater level measurements at each well are presented in Table 1 and shown on Figure 3. Measured groundwater elevations were obtained from the surveyed elevations for the top of casing (TOC) at each monitoring well and the measured depth to water from below the TOC. Based on the measurements, the inferred groundwater flow direction is southwesterly. The inferred groundwater contours based on the November 2, 2021 measurements are shown in Figure 3.

Subsurface utilities were located by service providers and private contractors prior to initiating the onsite investigations. Based on local topography, the limited underground utilities present on Site are considered to have minimal influence on localized groundwater flow direction or groundwater elevations, though off-Site services may be influencing groundwater flow direction.

The groundwater level in the deep/ bedrock monitoring well (BH/MW-4) was elevated relative to the groundwater level in the three shallow/ overburden monitoring wells (BH/MW-1 through BH/MW-2), indicating that there is an “upward” hydraulic gradient between the bedrock and overburden at this location.

In conjunction with the groundwater elevation measurements, a Solinst oil water interface probe was used to determine the presence and measure the thickness of free phase product on the surface of the groundwater (should any product be present). No free phase product was identified with the use of the interface probe on the surface of the groundwater at each monitoring well location during this investigation.

5.4 Coarse or Fine-Medium Soil Texture

The stratigraphy encountered in the boreholes generally consisted of silty sand overlying medium to coarse sand with trace to some gravel and trace silt. Based on the occurrence of coarse textured soils near/at the water table, the coarse soil analytical criteria were selected to assess the soil quality on the Phase Two Property.

5.5 Soil: Field Screening

The soil samples were field screened for visual, textural and olfactory indicators of the potential presence of impacts. Collected soil samples were additionally screened with a PID, as described in Section 4.5 using headspace analysis method. Values obtained during field screening were generally at low levels (i.e., less than 5 ppm). Readings obtained from the field screening are included in the borehole logs included in Appendix A.

5.6 Soil Quality

A total of eleven (11) select soil or shale rock samples from the four (4) borehole locations were submitted for the analysis of one (1) or more of the following groups of parameters: metals, PAHs, PHCs, VOCs and PCBs. Locations of the investigative boreholes from which the samples were collected are shown on Figure 2 and the depths from which the samples were collected from are presented in the results summary tables, including a comparison to the applicable MECP Table 3 Standards, enclosed after the report text, as follows:

- Table 2: Metals and Inorganics in soil
- Table 3: PAHs in soil
- Table 4: VOCs and PHCs in soil
- Table 5: PCBs in soil

Based on the reported analytical results, at the location BH/MW-1, in the soil sample collected from 3.1 to 3.6 mbgs, Sodium Adsorption Ratio (SAR) was reported to exceed the Table 3 criteria of the Standard for this parameter. Further, at the location BH/MW-4, in the soil sample collected from 0 to 0.6 mbgs, the concentration of lead (190 ug/g with duplicate results of 220 ug/g) was reported to exceed the Table 3 criteria of the Standard (120 ug/g). At the remaining sampled locations and sample intervals, trace concentrations of metals and PAHs were detected, at concentrations well below the criteria of the Standard. There were no detections of PHCs, VOCs, or PCBs reported for the submitted soil samples.

A sample of the shale rock core collected from approximately 8.5 to 10.0 mbgs was submitted for the analysis of VOCs. As reported, concentrations of VOCs were below the laboratory detection limits and therefore below the applicable Standards in this sample.

Summary of sample locations where exceedances of the Standards were reported is presented on Figure 4. Copies of the laboratory Certificate of Analysis for soil are included in Appendix C.

5.7 Groundwater Quality

Groundwater samples collected from the four (4) monitoring wells (BH/MW-1 to BH/MW-4) were submitted for the analysis of metals, PHCs, VOCs and PCBs. A summary of the groundwater analyses for the PCOCs, are presented in the results summary tables, including a comparison to the applicable MECP Table 3 Standards, enclosed after the report text, as follows:

- Table 6: Metals in groundwater
- Table 7: VOCs and PHCs in groundwater
- Table 8: PCBs in groundwater

The monitoring wells were drilled in downgradient locations from the neighbouring industrial activities and previously reported impacts within the adjacent municipal right-of-ways by others (Coffey 2010). No evidence of PHC impact to soil or groundwater was identified during the field screening program with PID or visual observations and no PHC or PCB impacts above the Standard were measured through analytical testing of groundwater at the investigated locations. Further, at locations BH/MW-2, BH/MW-3 and BH/MW-4, the detected concentrations of metals were below the criteria of the Standard.

Trace concentrations of one (1) or more of the following VOCs: tetrachloroethylene (PCE), trichloroethylene (TCE), cis-1,2-dichloroethylene and 1,1,1-trichloroethane, were reported in the groundwater samples collected from BH/MW-1, BH/MW-2 and BH/MW-3. TCE, PCE and certain other VOCs are present in industrial solvents and degreasers and in dry cleaning products.

At the location of BH/MW-1, the concentrations of cis-1,2-dichloroethylene (2.9 ug/L) and TCE (7.2 ug/L) were reported to exceed the Standards for these parameters (1.6 ug/L). Summary of sample locations where exceedances of the Standards were reported is presented on Figure 4.

Further, at the location BH/MW-4, the well screened within the shale bedrock, the concentration of sodium was reported above the Standard for this parameter.

Laboratory results for groundwater quality analyses were also compared to the Region of Peel Sewer Use By-Law standards for both sanitary sewer and storm sewer. All of the select parameters analyzed were found to meet both sanitary sewer discharge standards and the more stringent storm sewer discharge standards. However, it is noted that the concentration of some VOC parameters (e.g., trichloroethylene, cis-1,2-dichloroethylene) was within an order-of-magnitude of the standard for storm sewers at BH/MW-1 and BH/MW-3. Further, it is noted that the selected analyses as part of this Phase Two ESA did not include the entire suite of parameters included in the Sewer Use By-Law.

Copy of the laboratory Certificate of Analysis for groundwater is included in Appendix C.

6. CONCLUSIONS

During the course of completing the Phase Two ESA at the 2247 and 2251 Dixie Road property in Mississauga, Ontario, a total of four (4) boreholes were advanced to assess the potential for subsurface impacts from the identified APECs related to off-Site impacts from neighbouring industrial activities and the potential for fill of unknown quality at the Site. Four (4) of the boreholes were completed with the installation of a monitoring well (BH/MW-1 to BH/MW-4) including one (1) well drilled into the shale bedrock, to investigate the soil and groundwater conditions at the subject Site. Based on the findings of the Phase Two ESA, the following conclusions are made.

Of the eleven (11) soil samples submitted, exceedances of the Standard were reported in two (2) of the soil samples. One (1) sample from location BH/MW-1 from near the water table, exceeded the Standard for SAR, which is considered to be potentially related to de-icing activities on nearby roadways.

At the location, BH/MW-4, in the shallow soil sample collected from 0 to 0.3 mbgs, which included slightly darker topsoil and the underlying subsoil as compared to the other locations, the concentration of lead exceeded the Standard. While the origin of the lead exceedance is unknown, it may be related to historic placement of fill of suspect origin. Based on our experience with projects where native coarse soils have been encountered, native soils specifically granular in texture, are sometimes elevated in certain metal parameters (i.e., lead and zinc). With respect to the reported elevated levels of lead in the one (1) sample collected from the topsoil and the subsurface native silty sand soils, this is considered to be isolated in nature, as the remainder of the soil samples from the other borehole locations contained concentrations of lead well below the applicable MECP Standard.

Based on the nature and occurrence of the elevated levels of lead and SAR in soil, the potential for environmental risk or impact to the subject property is considered to be low. However, these impacts will need to be considered should excess soils from the Site require off-Site disposal or re-use as part of future shaft construction at the Site. The soil disposal and re-use options will need to be considered based on the receiving site's requirements and in accordance with Ontario Regulation 406/19 for the purpose of excess soil management.

The reported results of laboratory analysis indicated that the groundwater quality generally meets the applicable Standards (including the Region of Peel sanitary and storm sewer bylaw standards), with the exception of an

exceedance of the MECP Table 3 criteria reported at the location of BH/MW-1 for two (2) VOCs and sodium at location BH/MW-4. With respect to the sodium exceedance in the well completed in the shale bedrock, it is inferred that origin may be attributed to the mineral content of shale rock. Based on the well's proximity to the municipal roadway it is potential that road de-icing may also contribute to the sodium content at this location, however, similar elevated concentrations of sodium were not detected in the overburden wells.

With respect to the VOC exceedances at the location of BH/MW-1, the origin of the exceedances at this location is unknown, as there is no reported historical records of use on-Site (based on inferred historical residential use), however it may be related to historical industrial activities on lands upgradient of the Site. As reported in the 2010 Coffey report, VOC exceedances were previously reported in the groundwater from overburden monitoring wells installed within the Dixie Road and Queensway right-of-ways. With respect to the impact to the future use of this Site as a shaft location, plans for construction dewatering will need to consider potential containment and treatment options for groundwater or disposal as liquid waste at an appropriate facility depending on the level of dewatering required and the selected disposal alternative.

7. RECOMMENDATIONS AND NEXT STEPS

In consideration of the findings of this Phase Two Environmental Site Assessment, we provide the following recommendations regarding the project:

- that the excavation for the shaft at Site 03D be designed and constructed to exclude groundwater seepage into the excavation.
 - this is to minimize potential for contaminant migration from the suspected source of contaminants (i.e., the industrial areas to the north) which may occur if intensive dewatering is undertaken.
- that confirmatory groundwater sampling according to the Region of Peel sewer use by-law standards be conducted before allowing discharge of groundwater from a construction dewatering system.
- that the Region of Peel sanitary sewer be considered the preferred receiver for construction dewatering discharge.
 - though the laboratory analyses completed in the current study identified no exceedances with respect to the Region of Peel storm sewer standards (for the select analyzed parameters), certain VOC parameters were close to the storm sewer standards, indicating increased potential for exceedances to occur or be encountered during construction.
- that, assuming a “watertight” excavation methodology, an Environmental Activity and Sector Registry (EASR) registration be obtained for construction dewatering (i.e., for initial purging of water from the excavation) and that the discharge management plan address handling and disposal of impacted groundwater from the excavation.
- that the project proceeds with the expectation that the permanent removal of more than 100 m³ of soil from Site 03D will make the project ineligible for exemption from filing notice under Ontario Regulation 406/19 and therefore will require, at minimum, a Destination Assessment Report as well as the development and implementation of a soil load tracking program.
 - this assumes that this Phase Two Environmental Site Assessment report and the previously completed Phase One Environmental Site Assessment Report, both having been completed prior to January 1, 2022, will serve as a Soil Characterization Report and an Assessment of Past Uses Report, respectively.
- that any monitoring wells no longer used for two (2) years, or no longer needed to support the proposed shaft construction on the subject property, be decommissioned per the requirements of Ontario Regulation 903 (as amended).

8. STATEMENT OF LIMITATIONS

The information presented in this Phase Two Environmental Site Assessment report is intended for the use by Region of Peel. GM BluePlan Engineering Limited accepts no liability for use of this information by third parties. Any decisions made by third parties on the basis of information provided in this report are made at the sole risk of the third parties.

GM BluePlan Engineering Limited cannot guarantee the accuracy or reliability of information provided by others. GM BluePlan Engineering Limited does not accept liability for unknown, unidentified, undisclosed, or unforeseen surface or sub-surface contamination that may later be identified.

The conclusions pertaining to the environmental condition of the soils identified at the Phase Two property are based on the visual observations at the locations of the investigative boreholes and monitoring wells only and on the analytical data for the selected soil and groundwater samples. GM BluePlan Engineering Limited cannot guarantee the environmental condition of fill material, soil and/or groundwater that may be encountered at the Site at locations, between investigated locations, that were not specifically investigated as part of this Phase Two Environmental Site Assessment.

The analytical findings represent soil conditions at the locations sampled only and do not necessarily represent the environmental condition of all fill or subsurface soils or groundwater located on the Phase Two property. Further classification of the subsurface soil and groundwater conditions at locations other than those investigated as part of this Phase Two Environmental Site Assessment would require additional subsurface investigation and further laboratory analyses. This report is believed to provide documentation of the Phase Two property site conditions as of November 2, 2021.

All of which is respectfully submitted,

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope

dilution methods.

Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta Environment's Interpretation of the Reference Method for the Canada-Wide Standard for Petroleum Hydrocarbons in Soil Validation of Performance-Based Alternative Methods September 2003". Documentation is available upon request. Modifications from Reference Method for the Canada-wide Standard for Petroleum Hydrocarbons in Soil-Tier 1 Method: F2/F3/F4 data reported using validated cold solvent extraction instead of Soxhlet extraction.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Remarks:

Bureau Veritas is accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Bureau Veritas are based upon recognized Provincial, Federal or US method compendia such as CCME, MELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Bureau Veritas' profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Bureau Veritas in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Bureau Veritas liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Bureau Veritas has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Bureau Veritas, unless otherwise agreed in writing. Bureau Veritas is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Bureau Veritas, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) All CCME PHC results met required criteria unless otherwise stated in the report. The CWS PHC methods employed by Bureau Veritas Laboratories conform to all prescribed elements of the reference method and performance based elements have been validated. All modifications have been validated and proven equivalent following "Alberta

GENERAL COMMENTS

Sample RCV204 [BH/MW-4] : PCB analysis: Due to the nature of the sample matrix, a smaller portion of the sample was extracted. DLs were adjusted accordingly.

Metals Analysis: Due to the sample matrix, the sample required dilution. Detection limits were adjusted accordingly.

Results relate only to the items tested.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).
