Control Point ID: 0700
Sample Date:
Regulation: MISA COMPLIANCE
Value: 1.7284
Unit of Measure: KG/D
Control Point Name: PLANT - PROCESS EFFLUENT
Parameter Name: PHOSPHORUS,UNFILTERED TOTAL
Result Structure: MISA MONTHLY REPORTING
Param Reported As: AS PHOSPHORUS
Frequency: MONTHLY
Sector: PETROLEUM REFINERIES
Component Type: AVERAGE

MISA Industrial Wastewater Discharge

Company Code: 0000130104-2013
Control Point ID: 0700
Sample Date:
Regulation: MISA COMPLIANCE
Value: 0.27606
Unit of Measure: KG/D
Control Point Name: PLANT - PROCESS EFFLUENT
Parameter Name: AMMONIUM+AMMONIA, TOTAL FILTER.REAC
Result Structure: MISA MONTHLY REPORTING
Param Reported As: AS NITROGEN
Frequency: MONTHLY
Sector: PETROLEUM REFINERIES
Component Type: MAXIMUM

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Nov 2021

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Mar 2022

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks: Provincial AST

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-May 31, 2022

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

DRAFT

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities: Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2020

Commercial Fuel Oil Tanks: Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.
Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Chemical Manufacturers and Distributors: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-May 31, 2022

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Apr 2022

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Jun 2022

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Jun 30, 2022

DRAFT

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2020

Delisted Fuel Tanks: Provincial DTNK

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Feb 28, 2022

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011- Jun 30, 2022

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Jun 30, 2022

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011- Jun 30, 2022

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Mar 31, 2022

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

DRAFT

Emergency Management Historical Event: Provincial EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report: Provincial EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2021

List of Expired Fuels Safety Facilities: Provincial EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Jun 2022

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): Federal FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank: Provincial FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

DRAFT

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Feb 28, 2022

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Dec 2019

TSSA Historic Incidents: Provincial HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks: Provincial INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 21, 2022

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

DRAFT

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2022

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2020

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents: Federal NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Jun 30, 2021

National Energy Board Wells: Federal NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

DRAFT

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells: Private OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-May 31, 2022

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jan 2021

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Jun 30, 2022

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

DRAFT

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011- Jun 30, 2022

Pipeline Incidents: Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Jun 30, 2022

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2019

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.
RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jun 2022

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-May 31, 2022

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X. The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: 1988-Sep 2020; Dec 2020-Mar 2021

DRAFT

Wastewater Discharger Registration Database: Provincial SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2020

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Dec 2020

Variances for Abandonment of Underground Storage Tanks: Provincial VAR

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.
Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011- Jun 30, 2022

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Jan 31, 2022

DRAFT

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX C:
AERIAL PHOTOGRAPH SUMMARY

DRAFT

Date:	9/28/2022	File:	719033
To:	GMBP Team		
From:	Mark Ongarato		
Project:	Port Credit East Water and Wastewater Servicing Optimization Strategy Schedule C Class Environmental Assessment		
Subject:	Aerial Photograph Review for Phase One ESA		

TECHNICAL MEMO

For the purposes of this memo, the direction "north" means the direction along Hurontario Street toward Highway 403.

Notes:

Items in Red text represent observations from aerial imagery returned by Mississauga Maps (City of Mississauga 2022) that are considered to indicate significant areas within the project Study Area and are within the immediate 100 m study area of a particular Site.

Items in Blue text represent observations from aerial imagery returned by Mississauga Maps (City of Mississauga 2022) that are considered to indicate significant areas within the project Study Area and outside of the immediate 100 m study area of a particular Site.

Rosemere Rd. - Site "ROS_1"

Year	Notes
1954	Phase 1 ESA Site Assessment Area appears as a right-of-way (Rosemere Rd) and green space. Four (4) residential dwellings appear on the north side of Rosemere Rd. A short path (or driveway) can be seen on the south side of Rosemere Rd. It is unclear whether a building is present adjacent to the path (or driveway). Areas north and west of Rosemere Rd. are developed for what appear to be residential use. A small, wooded area and additional residential lots exist to the east. To the south, a railway appears to travel in an east / west direction. A drainage ditch (Mary Fix Creek) appears to travel in an east / west direction and is located south of Rosemere Rd., but north of the train tracks. A connection to this drainage ditch (Mary Fix Creek) can be seen at the east end of Rosemere Rd.
1966	No apparent changes to the Site.
1975	No apparent changes to the Site.
1985	No apparent changes to the Site.
1997	No apparent changes to the Site.
2007	No apparent changes to the Site. A small building can clearly be seen on the south side of Rosemere Rd, near the road's south end (location of the current pumping station).
2017	No apparent changes to the Site.

DRAFT

Sandham Rd. - Site "ROS_2"

Year	Notes
1954	Phase 1 ESA Site Assessment Area (Sandham Rd right-of-way) appears to connect Mona Rd and Vesta Dr. in what appears to be a developed residential area. To the east, a rectangular plot of vacant land appears to occupy the space between Sandham Rd and Hurontario St. Beyond this plot of land are residential developments. To the south, a railway appears to travel in an east / west direction (parallel to Sandham Rd). An apparent drainage ditch (Mary Fix Creek) is also located south of Sandham Rd (running parallel) but is north of the train tracks. To the north and west, the lands consist of residential development.
1966	No apparent changes to the Site.
1975	No apparent changes to the Site. The previously vacant land to the east of Sandham Rd. has been developed into a parking lot.
1985	No apparent changes to the Site.
1997	No apparent changes to the Site.
2007	No apparent changes to the Site.
2017	No apparent changes to the Site.

DRAFT

3 Elmwood Ave. N. - Site "LAK 3"

Year	Notes
1954	Phase 1 ESA Site Assessment Area (Lakeshore Rd. E.) appears to exist as a parking lot, located on the northeast corner of Lakeshore Rd. E. and Elmwood Ave. N., with road access from Elmwood Ave. N. The Site appears to be surrounded by mixed commercial and residential properties on all sides. A large industrial facility appears to occupy a space south of Lakeshore Rd. E. to the shoreline of Lake Ontario, situated east of St. Lawrence Dr. and west of Elmwood Ave. S. (approximately 50 m southwest of the Site). Directly to the east of the Site's property boundary, appears to be a residential property.
1966	The Site appears to have very slightly increased in size (east property boundary seems to have shifted further to the east). The adjacent property to the east of the Site appears to have been redeveloped for commercial or industrial use, with two road access points from Lakeshore Rd. E.
1975	The adjacent property to the east of the Site appears to have been redeveloped again for commercial use, with road access from Woodlawn Ave. A rectangular building appears to occupy most of the western portion of this adjacent property.
1985	No apparent changes to the Site.
1997	The large industrial facility (approximately 50 m southwest of the Site) appears to have been demolished.
2007	The demolished large industrial facility (approximately 50 m) appears to have been redeveloped into a residential subdivision.
2017	No apparent changes to the Site. A nearby commercial residential development has been constructed with frontage along Hurontario St. between Lakeshore Rd. E. and Park St. E. (previously appeared to be different commercial and residential uses).

DRAFT

Elmwood Ave. S. @ Wanita Rd. - Site "ELM_4"

Year	Notes
1954	The Phase 1 ESA Site Assessment Area (Intersection at Elmwood Ave. S. & Wanita Rd.) appears to be a paved "T" intersection in a residential neighbourhood. To the west (approximately 25 m), a large industrial facility exists between Lakeshore Rd. E. and Lake Ontario. To the east, residential subdivision properties exist between Lakeshore Rd. E. and Lake Ontario.
1966	No apparent changes to the Site.
1975	No apparent changes to the Site.
1985	No apparent changes to the Site.
1997	No apparent changes to the Site. The industrial facility to the west appears to have been demolished.
2007	No apparent changes to the Site. The demolished industrial facility to the west appears to have been redeveloped into a residential subdivision.
2017	No apparent changes to the Site.

St Lawrence Park (75 St. Lawrence Dr.) - Site "ELM_5"

Year	Notes
1954	The Phase 1 ESA Site Assessment Area appears to be a portion of Lake Ontario (i.e., not land) and partially portion of a large industrial facility yard. To the north, a large industrial facility exists between Lakeshore Rd. E. and Lake Ontario between St. Lawrence Dr. and Elmwood Ave. S. To the west and south is open water (i.e., Lake Ontario). To the east are residential subdivision properties.
1966	An extended shoreline appears to have been constructed on portion of Site. The newly constructed shoreline area appears to be partially used as an outdoor industrial yard, associated with the large industrial facility to the north.
1975	The shoreline appears to have been enlarged (i.e., the Site) to approximately the size that exists today (2022). No apparent changes to property use.
1985	The shoreline area appears vacant (i.e., no longer appears as outdoor industrial yard). Immediately north of the Site, a building appears to have been demolished. The large industrial facility (north of the Site) appears to be in use.
1997	No apparent changes to the Site. The large industrial facility appears to have been demolished.
2007	A "Waterfront Trail" and grassed area have been constructed at the Site. The demolished industrial facility has been redeveloped into a residential subdivision.
2017	No apparent changes to the Site.

DRAFT

Elmwood Ave. S. @ Carlis Pl. Site - "ELM_6"

Year	Notes
1954	The Phase 1 ESA Site Assessment Area appears to be the southernmost portion of Elmwood Ave. S. To the south is Lake Ontario. To the northwest is a large industrial facility (west of Elmwood Ave. S.) and residential subdivision properties (east of Elmwood Ave. S.) To the east are more residential subdivision properties.
1966	An extended shoreline appears to have been constructed immediately south of the Site. Carlis Pl. appears to have been developed (a small residential street) immediately north of the Site.
1975	No apparent changes to the Site.
1985	No apparent changes to the Site.
1997	No apparent changes to the Site. A building (60 Elmwood Ave. S.) has been developed.
2007	No apparent changes to the Site.
2017	No apparent changes to the Site.

Hiawatha Pkwy @ Wanita Rd. - Site "HIA_7"

Year	Notes
1954	The Phase 1 ESA Site Assessment Area appears to be the intersection of Hiawatha Pwky and Wanita Rd., situated in a residential subdivision area.
1966	No apparent changes to the Site or the surrounding area.
1975	No apparent changes to the Site or the surrounding area.
1985	No apparent changes to the Site or the surrounding area.
1997	No apparent changes to the Site or the surrounding area.
2007	No apparent changes to the Site or the surrounding area.
2017	No apparent changes to the Site or the surrounding area.

Hiawatha Park (76 Cumberland Dr.) - Site "HIA_8"

Year	Notes
1954	The Phase 1 ESA Site Assessment Area appears to include the intersection at Cumberland Dr. and Hiawatha Pkwy, a portion of parkland (south of Cumberland Dr.), and a small building located on the northern portion of the parkland.
1966	No apparent changes to the Site or the surrounding area.
1975	No apparent changes to the Site or the surrounding area.
1985	No apparent changes to the Site or the surrounding area.
1997	No apparent changes to the Site or the surrounding area.
2007	No apparent changes to the Site or the surrounding area.
2017	No apparent changes to the Site or the surrounding area.

APPENDIX D:
CITY DIRECTORY

Date:	9/7/2022	File:	719033
To:	GMBP Team		
From:	Mark Ongarato		
Project:	Port Credit East Water and Wastewater Servicing Optimization Strategy Schedule C Class Environmental Assessment		
Subject:	City Directory Summary		

TECHNICAL MEMO

For the purposes of this memo, the direction “north” means the direction along Hurontario Street toward Highway 403.

The City Directory records were requested alongside the ERIS reports either for individual Sites or groups of Sites depending on location and proximity to other project Sites.

Notes:

- 1955 – 2001 – year(s) the listing appears in the City Directory.
- Items in Blue text represent records returned by the City Directory Report that are considered to indicate the most significant records within the project Study Area and outside of the immediate 100 m study area of each Site.
- Items in Red text represent records returned by the City Directory Report that are considered to indicate the most significant records within the project Study Area and are within the immediate 100 m study area of a particular Site.

DRAFT

This is not a confirmation that there are no records in the archives. For a further search in our archives, please submit an application for release of public information (PI Form) through TSSA's new Service Prepayment Portal. The associated fee must be paid via credit card (Visa or MasterCard) through a secure site.
Please follow the steps below to access the new application(s) and Service Prepayment Portal:

1. Click Release of Public Information - TSSA and click "need a copy of a document";
2. Select the appropriate application, download it and complete it in full; and
3. Proceed to page 3 of the application and click the link TSSA Service Prepayment Portal under payment options (the link will take you the secure site to pay for the release via credit card).

Accessing the Service Prepayment Portal:

1. Select new or existing customer (*if you are an existing customer, you will need your account # & postal code to access your account);
2. Select the program area: AD (Amusement Devices), BPV (Boilers and Pressure Vessels), ED (Elevating Devices), FS (Fuels Services), OE (Operating Engineers) or SKI (Ski Lifts) and click continue;
3. Enter the application form number (obtained from bottom left corner of application form) and click continue;
    a. When selecting the application form number from the drop-down menu, please make sure you select the application that begins with "PI" (i.e. PI-FS, PI-BPV etc.);
4. Complete the primary contact information section;
5. Complete the fees section;
6. Upload your completed application; and
7. Upload supporting documents (if required) and click continue.

Once all steps have been successfully completed, you will receive your receipt via email.
Questions? Please contact TSSA's Public Information Release team at publicinformationservices@tssa.org.
Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Kind Regards,
Kim

Investigation/Action/Status

A forced main break caused the discharge of sanitary sewage onto the property of the Rosemere Pumping Station. An unknown volume had reached the Kennoli Creek, which runs into the Credit River. All appropriate Regional staff and Councillors were notified of the spill and later updated as site remediation and repairs progressed. SAC was notified at 10:54 p.m. and updated the following morning. The Credit Valley Conservation Authority was also notified. System Operations staff took all necessary action to contain the spill, remediate the site and repair the main.

Investigation/Action/Status

A resident complained that a contractor doing stonework on a home was dumping the material in a catchbasin. An employee of Astonia Stone facing, Paul Denison, said they had place the material in the private side drain after cleaning out a mixing drum. The material had not left the private side and was immediately cleaned up by the contractor after I informed him of the potential issues with grout having a pH of 13.

cess and Privacy Office

Hello,

The Halton-Peel District Office of the Ministry of the Environment, Conservation and Parks attended at St. Lawrence Park in Mississauga on the evening of September 12, 2022 and observed what appeared to be a black algal mat along the Lake Ontario shoreline.

Ministry staff collected water samples for algal toxin analysis. It is unknown if this is blue-green algae, though it does not appear to be blue-green algae.

For general information on blue-green algae, please refer to the Ministry of the Environment, Conservation and Parks' website at Blue-green algae | ontario.ca and the fact sheets attached.

If anyone contacts you with general questions, please refer them to these fact sheets and the link above. If anyone receives health related questions, please refer them to their physician or Peel Region Public Health Unit.

The Ministry will update you once we obtain further information. If you have any questions, please do not hesitate to contact me at this email address or at 289-242-3934.

Yours truly,

Tina Dufresne (she/her)
District Manager
Halton Peel District
Ministry of the Environment, Conservation and Parks

We want to hear from you. Please tell us about the quality of your interaction with our staff. You can provide feedback at 1-888-745-8888.

Subject: Information Email - Environmental Response Person call-out - Black Material, Lake Ontario Shoreline, Port Credit

Hello Simon & Comms,

Please see the Information Email below for a the Environmental Response Person call-out to a report of black material on the shoreline of Lake Ontario at Port Credit, reported in to the ministry on the evening of September 12, 2022.

Ministry staff attended the site on September 12, 2022 and observed some black fibrous material, appearing to be black mat algae in water along the shoreline, approximately 80m in length. Water samples were collected at the beach area. Six dead fish were observed; the fish were heavily decayed and no specimens were collected. Analytical results from the sampling will be shared with the local public health unit once available. There was no media presence on site.

If there are any questions, please let me know.

Thank you,

Lindsay Porter
(647) 299-8595

Information Email
ERP Response to Black Material Along Lake Ontario Shoreline,
St. Lawrence Park, 75 St. Lawrence Drive, Port Credit, Mississauga
September 13, 2022

What Happened?

- On Monday, September 12, 2022, the Ministry of the Environment, Conservation and Parks (MECP) Spills Action Centre (SAC) received a complaint of black material building up along the Port Credit Marina. The complainant reported they detected a sewage odour and observed dead salmon and dead seagulls.

What Action was Taken?

- The MECP's Environmental Response Person (ERP) arrived on-site at about 7:13 pm.
- A mild musty odour was detected. Black fibrous material, appearing to be black mat algae was observed in water, along the shoreline, on the west and east edges of a sandy beach area.
- The eastern section of the beach was more impacted than the western section. The impacts located along the eastern section were approximately 80 meters in length. Further east, the lake water was clear.
- Water samples were collected at the beach area.
- Six dead fish were observed. The fish were heavily decayed and no specimens were collected. No dead birds were observed.
- No media were on-site.
- Notification of the algal mat and sampling was provided to the Region of Peel, Region of Peel Public Health Unit, City of Mississauga, and Credit Valley Conservation Area on September 13, 2022.

Who Attended?

- Ministry of the Environment, Conservation and Parks

Potential Environmental Impact?

- A material appearing to be black mat algae was observed in Lake Ontario.

Source Water Protection

- The issue is located in the Credit Valley Source Protection Area.
- The area is not located in a Wellhead Protection Area or an Intake Protection Zone.

Next Steps:

- The samples will be delivered to the lab on September 13, 2022 and analysis results will be provided to the Region of Peel Public Health when available.

Incident Summary:
MOE TIPS: black substance discharging to Lake Ontario

Initial Incident Description (as reported):

Created: Nicholas Lymer (Spills Action Centre) - 2020/07/16 12:37:31 PM

s.21

Caller to report [redacted] is at the St. Lawrence Park in Port Credit and sees a black substance coming out of a stone pipe (likely the stormwater outfall located at the western area of the park). It is watery, changing the color of the rocks from brown to black and the color of the water to a silver color. There is one dead fish (approx 60cm long) and one dead bird. SAC requested to know if there are any odours and the caller stated there is a sulphuric almost decaying smell, but it may be contributed to the dead wildlife. Caller advised that there are some swans swimming nearby. SAC inquired if the discharge is complete or ongoing and the caller stated that the outfall is still actively running, but [redacted] cannot confirm if it is just water running or more of the black substance. SAC provided IR#, MOE TIPS for a photo.

Caller is requesting to have follow-up from the local officer if possible. Caller gives permission for SAC to give [redacted] name and number to responding agencies.

12:48 SAC(nl) to RoP (905-791-7800 ext 3101) - Puvana; briefed. SAC provided [redacted] (original caller) contact info for responding officer Paul Theodorlis to assist finding the exact location of the outfall. SAC provided IR#, requested to be called back with Pauls assessment.

12:55 SAC(nl) to MECP HP (905-319-8292) - left vm with Nick Fowler requesting a call back.

13:05 Nick Fowler (MECP HP (905-319-8292) to SAC(nl) - briefed. SAC to update Nick after RoP provides assessment.

13:16 SAC(nl) attached photos received via MOE TIPS (see below).

13:17 SAC(nl) to ECCC (8662832333) - briefed.

13:29 SAC(nl) e-mailed report to ECCC.

15:21 SAC(nl) to RoP (905-791-7800 ext 3101) - Puvana; confirmed Paul Theodorlis is on site, requested to speak with him. Puvana tried to transfer but Paul did not answer. Puvana will instruct Paul to call SAC back as soon as she hears from him.

15:33 Paul Theodorlis to SAC(nl). Paul did find the outfall at the foot of Helen Street South. The water is clear and colorless going in to Lake Ontario. The rocks are black/silver and a bit of a small but it could be some of the debris blocking the outfall. There is one dead fish on the shoreline that appears to be a couple weeks old. Paul doesnt know what the discoloration is or how long it has been there. City of Mississauga was on site earlier but they did not find this outfall, he will speak with CoM public works Eric Cameron to see if they can investigate within the storm sewers. Paul checked upstream for staining on asphalt near catchbasins and did not see anything, but did not pop open any cbs. SAC requested that Paul ask Eric Cameron to notify SAC with their action plan after the two of them speak. SAC provided IR#.

15:40 SAC(nl) to Nick Fowler (MECP HP, 905-319-8292) - briefed.

15:47 Eric Cameron (City of Mississauga Public Works) to SAC(nl). He will have road patroller pop a couple manhole lids in the area. He knows there is some remedial work 65 Port Street E but this is likely too far away. SAC to be updated with roads assessment.

15:50 SAC(nl) to Trevor Swift (905-615-3200, ext 8358). Left vm as a precaution, left IR# and general brief.

DRAFT

17:14 SAC(nl) to City of Mississauga Works ((905) 615-3000) - requesting update. Their staff are still on route to site. SAC to be updated.

SAC(nl) handed to SAC(mp)

20:30 SACmp to Mississauga Works (905 615-3000) – SACmp requesting update. Dispatch was unaware of the incident, passed to Roland, 647-861-2945.
- The source was not found, the CB, and they found nothing. Caller checked based on a map Eric Cameron provided, at Helena and port street, checked the requested manholes. There was nothing found. The water looked black, but caller did not think it had anything to do with the incident and looked clear coming from the inlet. Caller attended at 19:20. Supervisor stated they will check again tomorrow morning, no ETA provided. SACmp requested to be updated tomorrow.

July17, 2020
08:03 Eric (Mississauga Works) to SAC(ck): As of this morning, they are on site at the outfall. The water was running clear. As there is some organics and other debris decomposing, it is causing a bit of sulfur odour and some discolouration. A pollutant is not suspected, as there is confirmed natural organic decomposition. The flow will settle out as all the water inspected during the event was running clear. No further updates expected.

SAC Action Class:	
Non-Standard Procedure:	No

Incident Description:
Last update: David M Keene (Halton-Peel District Office) - 2020/07/20 10:21:26 AM
2020/07/20 - DK - The issue was investigated by both the Region of Peel and the City of Mississauga, who determined that there is decomposing organic matter at the outfall and will not be following up further. No action required by the ministry at this time. Recommend close.

Incident Summary:
DWMD Region of Peel: Rosemere PS Generator Being Replaced

Initial Incident Description (as reported): Created: Neil Hamilton (Spills Action Centre) - 2016/01/25 08:35:10 AM
Caller to SACnh reports: -They are going to be taking the back up generator down for maintenance to make a TSSA upgrade. -While this generator is down they will have a back up on stand-by as a contingency. -The PS will continue to remain in normal operation while the work is being completed so there is no threat or concern for any sewage discharge. -The time line for the work to be completed is 72h. They will commence work at 0900h. -Caller will update if there are any issues and when the work is completed. -IR# Provided.

SAC Action Class:	Notifications
Non-Standard Procedure:	No

Incident Description: Last update: Shelley Yeudall (DWMD Halton-Peel Office) - 2016/02/01 01:10:45 PM
Shelley Yeudall update, no further action required - File closed.

Incident Description Continuation:

Incident Update:

DRAFT

Akiko Date - 2016/01/27 created; 2020/09/19 last update - Spills Action Centre
Robert Daw updates that the updgrade was completed and the generator is back on line as of 08:00 this morning.

Was there an MOE field response?	No
Were there samples collected / analyzed at any time?	No
Health / Environmental Consequences at the Time of Incident	
Health / Environmental Consequences:	1 - Administrative

Has a Water Body been impacted?	No
Receiving Environment:	
Incident Event:	
Incident Reason:	
For Sewage programs, what effluent types are being assessed?	Stormwater
MOE/Other Agencies Involved:	Province - MOE-District Office
Was there a discharge / emission / spill of a contaminant to the environment?	
No	

Environmental Compliance Reporting (ECR)

Is this an air emission (measured or modelled) or wastewater (sewage) discharge exceedance that will become part of the Environmental Compliance Report? (legislation, certificate of approval, order, or guideline)
No

Voluntary / Mandatory Abatement

Was there Non-Compliance/Non-Conformance Identified?	○ Yes ● No

Voluntary / Mandatory Abatement Items
Not Available

Waste / EGR Information

Waste / EGR Information entries:

Ministry of the Environment, Conservation and Parks
Ministère de l'Environnement, de la Protection de la nature et des Parcs

ENVIRONMENTAL COMPLIANCE APPROVAL
NUMBER 3043-BMVPEE
Issue Date: April 14, 2020

The Regional Municipality of Peel
10 Peel Centre Drive
Brampton, Ontario
L6T 4B9

Site Location: 182 Rosemere Road
City of Mississauga, Regional Municipality of Peel

You have applied under section 20.2 of Part II.1 of the Environmental Protection Act, R.S.O. 1990, c. E. 19 (Environmental Protection Act) for approval of:

the following equipment and emission sources at the Rosemere Road Sewage Pumping Station:

- one carbon adsorption unit, to control odourous emissions from the wet well, having a removal efficiency of 99.5%, equipped with a total of 1.1 cubic metres of activated carbon media and activated alumina media impregnated with sodium permanganate, discharging to the air at a maximum volumetric flow rate of 0.43 cubic metre per second through a stack (ID: OCU) having an exit diameter of 0.25 metre, and extending 5.3 metres above grade;

- one (1) gooseneck vent (ID: G2), serving the wet well, discharging passively to the air, having an exit diameter of 0.15 metre, and located 0.9 metre above grade;

- one (1) gooseneck vent (ID: G3), serving the sewage overflow chamber, discharging passively to the air, having an exit diameter of 0.15 metre, and extending 0.9 metre above grade;

all in accordance with the Environmental Compliance Approval Application submitted by The Regional Municipality of Peel, dated May 14, 2019, and signed by Jimmy Chong, Project Manager, The Regional Municipality of Peel; the supporting Emission Summary and Dispersion Modelling Report prepared by Independent Environmental Consultants, dated April 8, 2019, and signed by Kim Theobald; the supporting Acoustic Assessment Report prepared by Independent Environmental Consultants, dated April 9, 2019, and signed by Nick Shinbin; and the additional information submitted by Mateusz Lewandowski, Cole Engineering Group Ltd. via email dated March 19, 2020.

For the purpose of this environmental compliance approval, the following definitions apply:

DRAFT

1. "*Acoustic Assessment Report*" means the report, prepared in accordance with *Publication NPC-233,* by Nick Shinbin of Independent Environmental Consultants and dated April 9, 2019 submitted in support of the application, that documents all sources of noise emissions and *Noise Control Measures* present at the *Facility;*

2. "*Approval*" means this Environmental Compliance Approval, including the application and supporting documentation listed above;

3. "*Company*" means The Regional Municipality of Peel, that is responsible for the construction or operation of the *Facility* and includes any successors and assigns;

4. "*District Manager*" means the District Manager of the appropriate local district office of the *Ministry,* where the *Facility* is geographically located;

5. "*EPA*" means the *Environmental Protection Act* , R.S.O. 1990, c.E.19, as amended;

6. "*Exhausted*" means the capacity of the *Equipment* to adsorb emissions is reached and the *Equipment* is no longer able to effectively reduce emissions;

7. "*Equipment*" means the activated carbon adsorption unit described in the *Company's* application, this *Approval* and in the supporting documentation submitted with the application, to the extent approved by this *Approval;*

8. "*Facility*" means the entire operation located on the property where the *Equipment* is located;

9. "*Manual*" means a document or a set of documents that provide written instructions to staff of the *Company;*

10. "*Ministry*" means the ministry of the government of Ontario responsible for the *EPA* and includes all officials, employees or other persons acting on its behalf;

11. "*Noise Control Measures*" means measures to reduce the noise emissions from the *Facility* and/or *Equipment* including, but not limited to, silencers, acoustic louvres, enclosures, absorptive treatment, plenums and barriers, described in the *Company* 's application, and in the supporting documentation referred to herein, including the *Acoustic Assessment Report* , to the extent approved by this *Approval;*

12. "*Publication NPC-233*" means the *Ministry* Publication NPC-233, "Information to be Submitted for Approval of Stationary Sources of Sound", October, 1995 as amended; and

13. "*Publication NPC-300*" means the *Ministry* Publication NPC-300, "Environmental Noise Guideline, Stationary and Transportation Sources – Approval and Planning, Publication NPC-300", August, 2013, as amended.

You are hereby notified that this environmental compliance approval is issued to you subject to the terms and

DRAFT

conditions outlined below:

TERMS AND CONDITIONS

1. OPERATION AND MAINTENANCE

1. The *Company* shall ensure that the *Equipment* is properly operated and maintained at all times. The *Company* shall:

    a. prepare, before commencement of operation of the *Equipment,* and update, as necessary, a *Manual* outlining the operating procedures and a maintenance program for the *Equipment,* including:

        i. routine operating and maintenance procedures in accordance with good engineering practices and as recommended by the *Equipment* suppliers;

        ii. emergency procedures, including spill clean-up procedures;

        iii. procedures for any record keeping activities relating to operation and maintenance of the *Equipment;*

        iv. all appropriate measures to minimize noise and odorous emissions from all potential sources; and

    b. implement the recommendations of the Manual.

2. The *Company* shall ensure that the activated carbon and activated alumina in the *Equipment* is replaced before it is *Exhausted.*

2. RECORD RETENTION

1. The *Company* shall retain, for a minimum of two (2) years from the date of their creation, all records and information related to or resulting from the recording activities required by this *Approval,* and make these records available for review by staff of the *Ministry* upon request. The *Company* shall retain:

    a. all records on the maintenance, repair and inspection of the *Equipment;* and

    b. all records of any environmental complaints, including:

        i. a description, time and date of each incident to which the complaint relates;

        ii. wind direction at the time of the incident to which the complaint relates; and

DRAFT

iii. a description of the measures taken to address the cause of the incident to which the complaint relates and to prevent a similar occurrence in the future.

3. NOTIFICATION OF COMPLAINTS

1. The *Company* shall notify the *District Manager,* in writing, of each environmental complaint within two (2) business days of the complaint. The notification shall include:

   i. a description of the nature of the complaint; and

   ii. the time and date of the incident to which the complaint relates.

4. NOISE

1. The *Company* shall:

   a. fully implement the *Noise Control Measures* specified in the *Acoustic Assessment Report,* prior to commencement of operation of the *Facility;*

   b. ensure, subsequent to the completion of the *Noise Control Measures* , that the noise emissions from the *Facility* comply with the limits set out in *Ministry Publication NPC-300;* and

   c. ensure that the *Noise Control Measures* are properly maintained and continue to provide the acoustical performance outlined in the *Acoustic Assessment Report.*

The reasons for the imposition of these terms and conditions are as follows:

1. Condition No. 1 is included to emphasize that the *Equipment* must be maintained and operated according to a procedure that will result in compliance with the *EPA,* the regulations and this *Approval.*

2. Condition No. 2 is included to require the *Company* to keep records and to provide information to staff of the *Ministry* so that compliance with the *EPA,* the regulations and this *Approval* can be verified.

3. Condition No. 3 is included to require the *Company* to notify staff of the *Ministry* so as to assist the *Ministry* with the review of the site's compliance.

4. Condition No. 4 is included to provide the minimum performance requirements considered necessary to prevent an adverse effect resulting from the operation of the *Facility.*

In accordance with Section 139 of the Environmental Protection Act, you may by written Notice served upon me and the Environmental Review Tribunal within 15 days after receipt of this Notice, require a hearing by the Tribunal. Section 142 of the Environmental Protection Act provides that the Notice requiring the hearing shall state:

a. The portions of the environmental compliance approval or each term or condition in the environmental compliance approval in respect of which the hearing is required, and;

DRAFT

b. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

The Notice should also include:

1. The name of the appellant;
2. The address of the appellant;
3. The environmental compliance approval number;
4. The date of the environmental compliance approval;
5. The name of the Director, and;
6. The municipality or municipalities within which the project is to be engaged in.

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

DRAFT

AMENDED ENVIRONMENTAL COMPLIANCE APPROVAL
NUMBER 2960-ALCLTM
Issue Date: June 22, 2017

The Regional Municipality of Peel
10 Peel Centre Drive
Brampton, Ontario
L6T 4B9

Site Location: Region of Peel's municipal sanitary sewage collection system

You have applied under section 20.2 of Part II.1 of the Environmental Protection Act, R.S.O. 1990, c. E. 19 (Environmental Protection Act) for approval of:

system-wide municipal sanitary sewage Works serving the Regional Municipality of Peel for the collection and transmission of sanitary sewage, connected to the G. E. Booth Lakeview Wastewater Treatment Facility, the Clarkson Wastewater Treatment Facility and the Inglewood Wastewater Treatment Facility;

The Environmental Compliance Approval includes the following:

Schedule	Contents
Schedule A	Description of Works
Schedule B	Terms and Conditions
Schedule C	Limited Operational Flexibility
Schedule D	Assumption of Ownership of Sewage Works
Schedule E	Supporting Documents

DRAFT

Schedule A: Description of Works

System Owner and Operator	**The Regional Municipality of Peel**
System Name	**Sanitary Collection System servicing the G. E. Booth Lakeview Wastewater Treatment Facility, the Clarkson Wastewater Treatment Facility and the Inglewood Wastewater Treatment Facility**

The sanitary sewage collection system serving the G. E. Booth Lakeview Wastewater Treatment Facility, the Clarkson Wastewater Treatment Facility and the Inglewood Wastewater Treatment Facility consists of approximately 3,780 kilometres (km) of sanitary sewers and sanitary forcemains, thirty-two (32) sewage pumping stations (SPS), one (1) odour/corrosion control facility and two (2) septage receiving stations. The sanitary sewage collection system also includes all other controls, electrical equipment, instrumentation, piping, pumps, valves and appurtenances that are essential for the proper operation of the Works. The sanitary sewage collection system serves the urban area of the Regional Municipality of Peel.

Schedule A includes:

1.0 System-Wide Approval – Sanitary Sewage Collection System

2.0 System-Wide Approval – Sewage Pumping Stations

3.0 System-Wide Approval – Odour Control and Septage Receiving Facilities

4.0 System-Wide Approval – System Overflows

DRAFT

1.0 System Wide Approval – Sanitary Sewage Collection System

The main components of the Sanitary Sewage Collection System include the Mains and Forcemains described below:

1.1. Gravity sewer Mains and Forcemains included in Table 1:

Table 1. Sanitary Sewage Collection System	
Plan / Files	Revision Date
Sanitary Infrastructure Map - The Regional Municipality of Peel (not to scale)	November 17, 2016

Classification of the Sanitary Sewage Collection System at the date of issuance of this Approval by length:

Table 2. Sanitary Sewage Collection System by Length			
System Type	Pipe Diameter (mm)	Length (km)	System Total Length (km)
Sanitary sewers	0-250	2,293.5	3,289.5
	300-500	528	
	525-1,050	337.1	
	≥1,200	130.9	
Forcemains	0-250	179.3	489.5
	300-500	142.2	
	525-1,050	168	
	≥1,200	0	
		Total length	**3,779**

DRAFT

2.0 System Wide Approval – Sewage Pumping Stations

2.1 Beach Street Sewage Pumping Station	
Location	639 Beach Street, Mississauga.
UTM Coordinates	616053.71 E, 4824733.26 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 1250 m long and 450 mm diameter ductile forcemain, one (1) approximately 30 m long 450 mm diameter ductile forcemain and one (1) approximately 1220 m long 500 mm diameter ductile forcemain.
Rated Capacity	756 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 1-459-77-006, 3-0588-91-006 and 8-3135-91-926, issued on January 24, 1977, June 11, 1991 and February 20, 1992, respectively.
Overflow	Overflow structure for discharge to Lake Ontario. The overflow discharge to the SPS west side to Lake Ontario.
Notes	The station contains one (1) odour control unit that uses activated carbon.

2.2 Beechwood Sewage Pumping Station	
Location	503 Lakeshore Road East, Mississauga.
UTM Coordinates	615470.64 E, 4824739.1 N.
Description	The station contains one (1) building, two (2) wet wells, one (1) dry well, four (4) pumps, two (2) grinders, and all associated controls and appurtenances. The station is connected to two (2) 750 mm diameter forcemains.
Rated Capacity	1,500 L/s, equipped with four (4) pumps: three (3) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 5523-9ZBPUW issued on August 25, 2015.
Overflow	No engineered overflow.
Notes	The station contains one (1) odour control unit that uses activated carbon.

DRAFT

2.3 Ben Machree Sewage Pumping Station	
Location	67 Ben Machree Drive, Mississauga.
UTM Coordinates	613932.14 E, 4821838.87 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 370 m long 200 mm diameter asbestos cement forcemain.
Rated Capacity	30 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 1425-7GCQJS and 1162-7GEKJ2, issued on July 11, 2008 and Sept 29, 2008, respectively.
Overflow	Overflow discharges to storm management system.
Notes	

2.4 Bolton North Hill Sewage Pumping Station	
Location	109 Castelli Court, Caledon (Bolton).
UTM Coordinates	601949.68 E, 4861285.58 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 605 m long 200 mm diameter forcemain.
Rated Capacity	26 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	No approval record.
Overflow	No engineered overflow.
Notes	

DRAFT

2.5 Bolton Sewage Pumping Station	
Location	95 Old King Road, Caledon (Bolton).
UTM Coordinates	602103.39 E, 4859690.42 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, three (3) pumps, one (1) submersible mixer, one (1) grinder, and all associated controls and appurtenances. The station is connected to two (2) approximately 980 m long 350 mm diameter forcemains and one (1) approximately 980 m long 450 mm diameter forcemain.
Rated Capacity	380 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 3-0460-84-006 and 8230-6CBM2R, issued on May 11, 2000 and June 20, 2005, respectively.
Overflow	Overflow structure for discharges to Humber River.
Notes	

2.6 Caledon East Sewage Pumping Station	
Location	2 Mountcrest Road, Caledon.
UTM Coordinates	591265.13 E, 4857897.04 N.
Description	The station contains one (1) building, one (1) wet well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 560 m long 300 mm diameter ductile iron forcemain.
Rated Capacity	110 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 3-0294-94-006 and 8-3102-94-006, issued on April 14, 1994 and May 2, 1994, respectively.
Overflow	Overflow discharges to storm management pond.
Notes	The station can handle a reported capacity of approximately 124 L/s. The overflow discharges to the adjacent marsh.

DRAFT

2.7 Castlemore Sewage Pumping Station	
Location	45 Blaketon Court, Brampton.
UTM Coordinates	602781.62 E, 4847640.79 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 465 m long 150 mm diameter PVC forcemain.
Rated Capacity	20 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 5017-4XAP2N, issued on June 8, 2001.
Overflow	Overflow discharges to storm management system then to tributary of Humber River.
Notes	

2.8 Dougall (Mayfield West) SPS	
Location	535 Dougall Ave, Caledon
UTM Coordinates	593488.18 E, 4844793.50 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, three (3) pumps, and all associated controls and appurtenances. The station is connected to two (2) approximately 780 m long, 200 mm diameter forcemains.
Rated Capacity	54 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 5750-9FLTNF, issued on May,20, 2014.
Overflow	Overflow discharges to the Etobicoke Creek.
Notes	The station contains one (1) odour control unit.

DRAFT

2.9 Elmwood Sewage Pumping Station	
Location	2 Elmwood Avenue South, Mississauga.
UTM Coordinates	614927.34 E, 4823441.68 N.
Description	The station contains one (1) building, one (1) wet well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 995 m long 450 mm diameter ductile iron forcemain.
Rated Capacity	195 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 3-0089-86-006 issued on February 25, 1986.
Overflow	Overflow structure for discharge to Lake Ontario.
Notes	

2.10 Fifeshire Sewage Pumping Station	
Location	1775 Fifeshire Court, Mississauga.
UTM Coordinates	606785.99 E, 4823398.69 N.
Description	The station contains one (1) control kiosk, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 105 m long 100 mm diameter forcemain.
Rated Capacity	28 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	None.
Previous ECA	ECA No. 3-1014-95-006 issued on August 10, 1995.
Overflow	Overflow discharges to storm management system then into Sawmill Creek.
Notes	

DRAFT

2.11 Front Street Sewage Pumping Station	
Location	1 Front Street South, Mississauga.
UTM Coordinates	614151.6 E, 4822878.75 N.
Description	The station contains one (1) building, one (1) wet well, four (4) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 1030 m long 500 mm diameter forcemain.
Rated Capacity	314 L/s, equipped with four (4) pumps: three (3) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 8960-5ACPM6 issued on May 23, 2002.
Overflow	Overflow structure for discharge to Credit River.
Notes	The station contains one (1) odour control unit that uses activated carbon.

2.12 Gore Road Sewage Pumping Station	
Location	4599 Queen Street East, Brampton.
UTM Coordinates	608512.82 E, 4846666.83 N.
Description	The station contains two (2) buildings, one (1) wet well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 1375 m long 200 mm diameter forcemain and one (1) approximately 1320 m long 300 mm diameter forcemain.
Rated Capacity	82 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 4396-7GLPMB issued on Aug 26, 2008.
Overflow	Overflow discharges to secondary storage then to adjacent creek.
Notes	

DRAFT

2.13 Harvestview Sewage Pumping Station	
Location	10 Harvestview Avenue, Caledon (Bolton).
UTM Coordinates	603346.97 E, 4858939.35 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 370 m long 150 mm diameter forcemain.
Rated Capacity	14 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	No approval record.
Overflow	Overflow discharges to storm management system.
Notes	

2.14 Hiawatha Sewage Pumping Station	
Location	76 Cumberland Drive, Mississauga.
UTM Coordinates	615351.77 E, 4823813.47 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps and all associated controls and appurtenances. The station is connected to one (1) approximately 5 m long 150 mm diameter ductile iron forcemain.
Rated Capacity	40 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 8-3058-90-006 issued on July 20, 1990.
Overflow	Overflow structure for discharge to Lake Ontario.
Notes	The station can handle a reported capacity of approximately 16.5 L/s. The overflow discharges to Lake Ontario.

DRAFT

2.15 Indian Road Sewage Pumping Station	
Location	397 Temagami Crescent, Mississauga.
UTM Coordinates	613041.95 E, 4823138.65 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 1165 m long 250 mm diameter asbestos cement forcemain.
Rated Capacity	73 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 5472-4LBLKG issued on June 15, 2000.
Overflow	Overflow structure for discharge to Credit River.
Notes	

2.16 Inglewood Sewage Pumping Station	
Location	15551, Inglewood Village, Caledon.
UTM Coordinates	586139.92 E, 4849676.02 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, one (1) grinder, and all associated controls and appurtenances. The station is connected to one (1) approximately 345 m long 100 mm diameter PVC forcemain.
Rated Capacity	7.5 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 4007-7G6Q82 issued on July 10, 2008.
Overflow	No engineered overflow.
Notes	

DRAFT

2.17 Intermodal Sewage Pumping Station	
Location	322 Intermodal Drive, Brampton.
UTM Coordinates	607012.14 E, 4843348.46 N.
Description	The station contains one (1) building, one (1) wet well, one (1) grinder, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 265 m long 400 mm diameter ductile iron forcemain.
Rated Capacity	160 L/s, equipped with two (2) pumps: two (2) duty.
Standby Power	Provided.
Previous ECA	ECA No. 5127-835SBH issued on March 10, 2010.
Overflow	No engineered overflow.
Notes	

2.18 Jack Darling Memorial Park Sewage Pumping Station No. 1	
Location	1180 Lakeshore Road West, Mississauga.
UTM Coordinates	612539.08 E, 4820491.91 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, one (1) grinder, four (4) pumps, and all associated controls and appurtenances. The station is connected to two (2) approximately 1785 m long 600 mm diameter concrete forcemains.
Rated Capacity	800 L/s, equipped with four (4) pumps: three (3) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 5016-7AMSSQ and 9281-7BASN5, issued on January 9, 2008 and January 9, 2008, respectively.
Overflow	Overflow structure for discharge to Lake Ontario.
Notes	The station contains one (1) odour control unit.

DRAFT

2.19 Jack Darling Memorial Park Sewage Pumping Station No. 2	
Location	1180 Lakeshore Road West, Mississauga.
UTM Coordinates	612871.45 E, 4820238.56 N.
Description	The station contains one (1) control kiosk, one (1) wet well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 165 m long 300 mm diameter PVC forcemain.
Rated Capacity	107 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 5016-7AMSSQ issued on January 9, 2008.
Overflow	Overflow structure for discharge to Lake Ontario.
Notes	The station contains one (1) odour control unit that uses activated carbon.

2.20 Lakelands Sewage Pumping Station	
Location	26 Stoneylake Avenue, Brampton.
UTM Coordinates	599472.37 E, 4841233.77 N.
Description	The station contains one (1) building, one (1) wet well, three (3) pumps, and all associated controls and appurtenances. The station is connected to two (2) approximately 575 m long 200 mm diameter forcemain.
Rated Capacity	64 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 7350-5UWJXF and 9922-5RNH3Q, issued on January 7, 2004 and April 26, 2004, respectively.
Overflow	Overflow discharges to storm management system then to Turtle Creek.
Notes	The station contains one (1) odour control unit that uses activated carbon.

DRAFT

2.21 Mayfield Sewage Pumping Station	
Location	12025 Bramalea Road, Brampton.
UTM Coordinates	597988.69 E, 4847373.15 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 810 m long 150 mm diameter asbestos cement forcemain.
Rated Capacity	20 L/s, with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 6027-5M3K5E and 8-3357-92-006, issued on April 30, 2003 and November 23, 1992, respectively.
Overflow	Overflow discharges to storm management system.
Notes	

2.22 McVean Sewage Pumping Station	
Location	3900 Ebenezer Road, Brampton.
UTM Coordinates	606519.54 E, 4846134.98 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 980 m long 500 mm forcemain and one (1) approximately 1005 m long 900 mm diameter forcemain.
Rated Capacity	1,400 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 8062-6TMHL2 and 6071-69GQ5M, issued on September 19, 2006 and February 17, 2005, respectively.
Overflow	Overflow discharges to storm management system.
Notes	The station contains one (1) odour control unit that uses a biofilter.

DRAFT

2.23 Meadowvale Sewage Pumping Station	
Location	7005 Old Mill Lane, Mississauga.
UTM Coordinates	602495.81 E, 4831091.99 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 715 m long 200 mm diameter ductile iron forcemain.
Rated Capacity	11 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	No approval record.
Overflow	Overflow discharges to storm management system.
Notes	

2.24 Mullet Creek Sewage Pumping Station	
Location	7755 Heritage Road, Brampton.
UTM Coordinates	598743.02 E, 4829741.26 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, four (4) pumps, one (1) grinder, and all associated controls and appurtenances. The station is connected to one (1) approximately 500 m long 500 mm diameter HDPE forcemain.
Rated Capacity	230 L/s, equipped with four (4) pumps: three (3) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA Nos. 2071-75HKBT, 0284-6Y7JS4 and 2278-75EQPT, issued on August 2, 2007, February 12, 2007 and August 3, 2007, respectively.
Overflow	No engineered overflow, with discharge to Mullet Creek.
Notes	The station contains one (1) odour control unit.

DRAFT

2.25 O'Neil Court Sewage Pumping Station	
Location	1839 O'Neil Court, Mississauga.
UTM Coordinates	607233.19 E, 4823183.25 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 335 m long 100 mm diameter PVC forcemain.
Rated Capacity	7.1 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	No approval record.
Overflow	Overflow discharges to storm management system draining to Mullet Creek.
Notes	

2.26 Pinetree Sewage Pumping Station	
Location	1487 Pinetree Crescent, Mississauga.
UTM Coordinates	612706.94 E, 4823515.93 N.
Description	The station contains one (1) control kiosk, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 100 m long 100 mm diameter PVC forcemain.
Rated Capacity	6.5 L/s equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	None.
Previous ECA	ECA No. 7910-7T9JUA issued on June 22, 2009.
Overflow	Overflow structure for discharge to nearby creek.
Notes	

DRAFT

2.27 Richard's Memorial Sewage Pumping Station	
Location	870 Lakeshore Road West, Mississauga.
UTM Coordinates	612968.72 E, 4821298.78 N.
Description	The station contains one (1) building, one (1) wet well, three (3) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 740 m long 400 mm diameter asbestos cement forcemain.
Rated Capacity	195 L/s, equipped with three (3) pumps: two (2) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 3-0414-87-006 issued on September 2, 1987.
Overflow	Overflow discharges to storm management system
Notes	

2.28 Rosemere Sewage Pumping Station	
Location	182 Rosemere Road, Mississauga.
UTM Coordinates	613891.58 E, 4823330.86 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 310 m long 200 mm diameter asbestos cement forcemain.
Rated Capacity	25 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 3-1313-94-006 issued on October 31, 1994.
Overflow	Overflow discharges to storm management system.
Notes	

DRAFT

2.29 Shardawn Mews Sewage Pumping Station	
Location	2206 Shardawn Mews, Mississauga.
UTM Coordinates	611041.58 E, 4823270.34 N.
Description	The station contains one (1) control kiosk, one (1) wet well, two (2) pumps, and all associated control and appurtenances. The station is connected to one (1) approximately 285 m long 100 mm PVC forcemain.
Rated Capacity	9.4 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	None.
Previous ECA	No approval record.
Overflow	Overflow discharges to storm management system draining to the Credit River.
Notes	

2.30 Silverbirch Trail Sewage Pumping Station	
Location	777 Silverbirch Trail, Mississauga.
UTM Coordinates	612274.58 E, 4819400.61 N.
Description	The station contains one (1) building, one (1) wet well, one (1) dry well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 310 m long 200 mm diameter forcemain.
Rated Capacity	48 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 7003-4LKNQE issued on June 23, 2000.
Overflow	Overflow discharges to storm management system then to Turtle Creek.
Notes	

DRAFT

2.31 Stonehaven Sewage Pumping Station	
Location	1570 Stonehaven Drive, Mississauga.
UTM Coordinates	611956.83 E, 4819266.97 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 390 m long 100 mm diameter forcemain.
Rated Capacity	12.9 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	No approval record.
Overflow	Overflow discharges to storm sewer.
Notes	

2.32 Watersedge Sewage Pumping Station	
Location	1650 Watersedge Road, Mississauga.
UTM Coordinates	612890.71 E, 4817931.05 N.
Description	The station contains one (1) building, one (1) wet well, two (2) pumps, and all associated controls and appurtenances. The station is connected to one (1) approximately 1455 m long 200 mm diameter asbestos cement and PVC forcemain.
Rated Capacity	13.5 L/s, equipped with two (2) pumps: one (1) duty and one (1) standby.
Standby Power	Provided.
Previous ECA	ECA No. 3-1014-95-006 issued on August 10, 1995.
Overflow	Overflow structure for discharge to Lake Ontario.
Notes

3.0 System Wide Approval – Odour Control and Septage Receiving Facilities

3.1 Torbram Septage Receiving Station	
Location	7795 Torbram Road, Brampton.
UTM Coordinates	607069.28 E, 4840597.25 N.
Description	The station contains one (1) septage receiving building, one (1) septage unloading bay, and all associated controls and appurtenances.
Previous ECA	ECA No. 9656-AB4QAM issued on July 12, 2016.
Notes	The station was designed to handle a peak flow rate of approximately 33.3 L/s and a maximum daily flow rate of 169 cubic metres per day.

3.2 York-Peel Forcemain Odour Control	
Location	2625 Steeles Avenue East, Brampton.
UTM Coordinates	606862.65 E, 4841531.39 N.
Description	The station contains one (1) building, one (1) outfall chamber, one (1) scrubber system, two (2) chemical injection systems and all associated controls and appurtenances.
Previous ECA	ECA Nos. 0703-62FKHD and 3945-5ZLKNA, issued on July 5, 2004 and July 6, 2004, respectively.

3.3 Mullet Creek Septage Receiving Station	
Location	7755 Heritage Road, Brampton.
UTM Coordinates	598743.02 E, 4829741.26 N.
Description	The station contains one (1) septage receiving area, one (1) septage unloading bay, and all associated controls and appurtenances.
Previous ECA	ECA Nos. 2071-75HKBT, 0284-6Y7JS4 and 2278-75EQPT, issued on August 2, 2007, February 12, 2007 and August 3, 2007, respectively.

Schedule B: Terms and Conditions

System Owner and Operator	**The Regional Municipality of Peel**
System Name	**Sanitary Collection System servicing the G. E. Booth Lakeview Wastewater Treatment Facility, the Clarkson Wastewater Treatment Facility and the Inglewood Wastewater Treatment Facility**

Schedule B includes:

1.0 Definitions

2.0 Terms and Conditions

3.0 Reasons

DRAFT

1.0 Definitions

For the purpose of this environmental compliance approval, the following definitions apply:

"Approval" means this entire document and any schedules attached to it, and the application;

"Assumed Works" means those portions of the sewage works whose ownership has been assumed by the Owner from a different previous owner;

"BOD5" (also known as $TBOD_5$) means five day biochemical oxygen demand measured in an unfiltered sample and includes carbonaceous and nitrogenous oxygen demand;

"Class Environmental Assessment Project" means an Undertaking that does not require any further approval under the EAA if the planning process set out in the class environmental assessment document is followed and successfully completed.

"CWA" means the Clean Water Act, R.S.O. 2006, c.22, as amended;

"Director" means a person appointed by the Minister pursuant to section 5 of the EPA for the purposes of Part II.1 of the EPA;

"Duty to Consult" pertains to the Crown's legal obligation to consult with Aboriginal peoples where it contemplates decisions or actions that may adversely impact asserted or established Aboriginal or treaty rights;

"*E. coli*" refers to the thermally tolerant forms of Escherichia that can survive at 44.5 degrees Celsius;

"EAA" means the Environmental Assessment Act, R.S.O. 1990, c. E.18, as amended;

"Emergency Situation" means a structural, mechanical or electrical failure that causes a temporary reduction in the capacity of the Sewage Pumping Station or an unforeseen flow condition that may result in:

a) danger to the health or safety of any person; or
b) injury or damage to any property, or serious risk of injury or damage to any property;

"EPA" means the Environmental Protection Act, R.S.O. 1990, c.E.19, as amended;

"Equivalent Equipment" means a substituted equipment or like-for-like equipment that meets the required quality and performance standards of a named equipment;

"Event" means an action or occurrence at the Sewage Pumping Station that causes a Sewage Pumping Station Overflow. An Event ends when there is no recurrence of a Sewage Pumping Station Overflow in the 12-hour period following the last Sewage Pumping Station Overflow. Two Events are separated by at least 12 hours during which there has been no recurrence of a Sewage Pumping Station Overflow;

"Limited Operational Flexibility" (LOF) means any modifications that the Owner is permitted to make to the Works under this Approval;

DRAFT

"Minister" means the Minister of the Environment and Climate Change;

"Ministry" means the ministry of the government of Ontario responsible for the EPA, CWA and OWRA and includes all officials, employees or other persons acting on its behalf;

"Notice of Assumption" means the form entitled "Notice of Assumption of Sewage Works";

"Notice of Modifications" means the form entitled "Notice of Modification to Sewage Works";

"Owner" means the Regional Municipality of Peel, and includes its successors and assignees;

"OWRA" means the Ontario Water Resources Act, R.S.O. 1990, c. O.40, as amended;

"Part II Order" means an order issued by the Minister that makes a Class Environmental Assessment Project an Undertaking that is subject to Part II of the EAA;

"Professional Engineer" means a person entitled to practice as a Professional Engineer in the Province of Ontario under a licence issued under the Professional Engineers Act;

"Proposed Works" means those portions of the sewage works under Limited Operational Flexibility proposed as part of a Notice of Modifications;

"Rated Capacity" means the Average Daily Flow which the Works are approved to handle;

"Sewage Pumping Station Overflow" means any discharge from a Sewage Pumping Station to the environment that does not undergo any treatment or only receives partial treatment before it is discharged to the environment;

"Significant Drinking Water Threat" has the same meaning as in the CWA;

"Significant Threat Policy(ies)" has the same meaning as in the CWA;

"Source Protection Plan" means a drinking water source protection plan prepared under the CWA;

"Substantial Completion" has the same meaning as "substantial performance" in the Construction Lien Act;

"Undertaking" has the same meaning as in the EAA;

"Water Supervisor" means the Water Supervisor of the appropriate local office of the Safe Drinking Water Branch of the Ministry, where the Works are geographically located; and

"Works" means the sewage works described in the Owner's application, this Approval, Proposed Works and the modifications made under Limited Operational Flexibility.

DRAFT

2.0 Terms and Conditions

You are hereby notified that this environmental compliance approval is issued to you subject to the terms and conditions outlined below:

TERMS AND CONDITIONS

2.1 GENERAL CONDITIONS

(1) The Owner shall ensure that any person authorized to carry out work on or operate any aspect of the Works is notified of this Approval and the conditions herein and shall take all reasonable measures to ensure any such person complies with the same.

(2) Except as otherwise provided by these conditions, the Owner shall design, build, install, operate and maintain the Works in accordance with the description given in this Approval, and the application for approval of the Works.

(3) Where there is a conflict between a provision of any document in the schedule referred to in this Approval and the conditions of this Approval, the conditions in this Approval shall take precedence, and where there is a conflict between the documents in the schedule, the document bearing the most recent date shall prevail.

(4) Where there is a conflict between the documents listed in Schedule 'A' and the application, the application shall take precedence unless it is clear that the purpose of the document was to amend the application.

(5) The conditions of this Approval are severable. If any condition of this Approval, or the application of any requirement of this Approval to any circumstance, is held invalid or unenforceable, the application of such condition to other circumstances and the remainder of this Approval shall not be affected thereby.

2.2 CHANGE OF OWNER

(1) The Owner shall notify the Water Supervisor and the Director, in writing, of any of the following changes within thirty (30) days of the change occurring:

(a) change of Owner;

(b) change of address of the Owner;

(c) change of partners where the Owner is or at any time becomes a partnership, and a copy of the most recent declaration filed under the Business Names Act, R.S.O. 1990, c.B17 shall be included in the notification to the Water Supervisor; or

(d) change of name of the corporation where the Owner is or at any time becomes a corporation, and a copy of the most current information filed under the Corporations

DRAFT

Information Act, R.S.O. 1990, c. C39 shall be included in the notification to the Water Supervisor.

(2) In the event of any change in ownership of the Works, other than a change to a successor municipality, the Owner shall notify in writing the succeeding owner of the existence of this Approval, and a copy of such notice shall be forwarded to the Water Supervisor and the Director.

(3) The Owner shall ensure that all communications made pursuant to this condition refer to the number at the top of this Approval.

2.3 SEWAGE PUMPING STATION OVERFLOW

(1) Any Sewage Pumping Station Overflow is prohibited, except:

(a) in an Emergency Situation; and

(b) where the Sewage Pumping Station Overflow is a direct and unavoidable result of a planned maintenance procedure, the Owner having notified the Water Supervisor at least fifteen (15) days prior to the occurrence of the Sewage Pumping Station Overflow and the Water Supervisor having given written consent of the Sewage Pumping Station Overflow.

(2) The Owner shall forthwith notify the Spills Action Centre (SAC) and the Medical Officer of Health of all Events as soon as possible. This notice shall include, at a minimum, the following information:

(a) the date, time, and duration of the Event;

(b) the location of the Sewage Pumping Station Overflow and the receiver;

(c) the measured or estimated volume of the Event (unless the Event is ongoing); and

(d) the reason for the Event.

(3) The Owner shall submit a summary report of the Sewage Pumping Station Overflow Events to the Water Supervisor on a quarterly basis, no later than each of the following dates for each calendar year: February 14, May 15, August 14, and November 15. The summary reports shall be in a format specified by the Ministry, which shall include, at a minimum, the following information on any Events that occurred during the preceding quarter:

(a) the date of the Event(s);

(b) the measured or estimated volume of the Event(s);

(c) the duration of the Event(s);

(d) the location of the Sewage Pumping Station Overflow and the receiver;

DRAFT

(e) the reason for the Event(s); and

(f) the impact of the Event(s) on the receiver(s).

(4) The Owner shall use best efforts to collect a representative sample consisting of a minimum of two (2) grab samples of the Sewage Pumping Station Overflow and have it analyzed for the parameters outlined in Condition 2.5 using the protocols specified in Condition 2.5, one at the beginning of the Event and the second approximately near the end of the Event, to best reflect the effluent quality of the Sewage Pumping Station Overflow.

(5) The Owner shall maintain a logbook of all Sewage Pumping Station Overflows, which shall contain, at a minimum, the types of information set out in sub-conditions 2(a) to 2(d) in respect of each Sewage Pumping Station Overflow.

2.4 OPERATION AND MAINTENANCE

(1) The Owner shall exercise due diligence in ensuring that, at all times, the Works and the related equipment and appurtenances used to achieve compliance with this Approval are properly operated and maintained. Proper operation and maintenance shall include effective performance, adequate funding, adequate operator staffing and training, including training in all procedures and other requirements of this Approval and the EPA and regulations, adequate laboratory services, process controls and alarms and the use of process chemicals and other substances used in the Works.

(2) The Owner shall prepare an operations manual for facilities within twelve (12) months of the issuance date of this Approval, that includes or references, but is not necessarily limited to, the following information:

(a) operating and maintenance procedures for routine operation of the Works;

(b) inspection programs, including frequency of inspection, for the Works and the methods or tests employed to detect when maintenance is necessary;

(c) repair and maintenance programs, including the frequency of repair and maintenance for the Works;

(d) procedures for the inspection and calibration of monitoring equipment;

(e) Emergency Response, Spill Reporting and Contingency Plans and Procedures for dealing with equipment breakdowns, potential spills and any other abnormal situations, including notification to the Spills Action Centre (SAC), the Medical Officer of Health, and the Water Supervisor; and

(f) procedures for receiving, responding and recording public complaints, including recording any follow-up actions taken.

DRAFT

(3) The Owner shall maintain the operations manual current and have access to a copy for each sewage pumping station for the operational life of the station. Upon request, the Owner shall make the manual available to Ministry staff.

(4) The Owner shall provide for the overall operation of the sanitary sewage collection system an operator who holds a licence that is applicable to that type of facility and that is of the same class as or higher than the class of the facility in accordance with Ontario Regulation 129/04.

2.5 MONITORING AND RECORDING

The Owner shall carry out the following monitoring program as outlined in this Approval:

(1) All samples and measurements taken for the purposes of this Approval are to be taken at a time and in a location characteristic of the quality and quantity of the Sewage Pumping Station Overflow stream over the time period being monitored.

(2) Samples shall be collected at the following sampling points, at the frequency specified, by means of the specified sample type and analyzed for each parameter listed and all results recorded:

Table 3. Monitoring during a Sewage Pumping Station Overflow Event (Samples to be collected from the Sewage Pumping Station Overflow stream)	
Sample Type	Grab
Frequency	One sample at the beginning of the Event and the second sample approximately near the end of the Event
Parameters	BOD5, Total Suspended Solids, Total Phosphorus, Total Ammonia Nitrogen, *E. coli*[1], and pH

Note 1: Sampling and analysis shall be performed only for Events that occur between April 1 and October 31 inclusive

(3) The methods and protocols for sampling, analysis and recording shall conform, in order of precedence, to the methods and protocols specified in the following:

(a) the Ministry's Procedure F-10-1, "Procedures for Sampling and Analysis Requirements for Municipal and Private Sewage Treatment Works (Liquid Waste Streams Only)", as amended from time to time by more recently published editions;

(b) the Ministry's publication "Protocol for the Sampling and Analysis of Industrial/Municipal Wastewater" (January 1999), ISBN 0-7778-1880-9, as amended from time to time by more recently published editions; and

(c) the publication "Standard Methods for the Examination of Water and Wastewater" (21st edition), as amended from time to time by more recently published editions.

2.6 REPORTING

(1) The Owner shall, upon request, make all manuals, plans, records, data, procedures and

supporting documentation available to Ministry staff.

(2) The Owner shall prepare and submit a performance report to the Water Supervisor on an annual basis, within ninety (90) days following the end of the period being reported upon. The first such report shall cover the first calendar year following the issuance of this Approval and subsequent reports shall be submitted to cover successive annual periods following thereafter. The reports shall contain, but shall not be limited to, the following information:

(a) a summary and interpretation of all monitoring data, including an overview of the success and adequacy of the Works;

(b) a description of any operating problems encountered and corrective actions taken;

(c) a summary of all maintenance carried out on any major structure, equipment, apparatus, mechanism or thing forming part of the Works;

(d) a summary of the calibration and maintenance carried out on all monitoring equipment;

(e) a summary of any complaints received during the reporting period and any steps taken to address the complaints;

(f) a summary of all Sewage Pumping Station Overflows, spill or abnormal discharge events;

(g) a copy of all Notice of Modifications submitted to the Water Supervisor as a result of Schedule C, Section 1(1), with a status report on the implementation of each modification;

(h) a report summarizing all modifications completed as a result of Schedule C, Section 1(3);

(i) a copy of all Notice of Assumptions submitted to the Water Supervisor as a result of Condition 2.8; and

(j) any other information the Water Supervisor requires from time to time.

(3) The Owner shall, within thirty (30) calendar days of issuance of this Approval, submit a Municipal Wastewater System Profile Information Form, and shall resubmit the updated document every time a notification is provided to the Water Supervisor in compliance with requirements of change of ownership under this Approval.

(4) The Owner shall retain for a minimum of five (5) years from the date of their creation, all records and information related to or resulting from the operation, maintenance and monitoring activities required by this Approval.

2.7 LIMITED OPERATIONAL FLEXIBILITY

(1) The Owner may make modifications to the Works in accordance with the terms and conditions of this Approval and subject to the Ministry's "Limited Operational Flexibility Criteria for Modifications to Municipal Sewage Works", included under Schedule C of this Approval, as

DRAFT

amended.

(2) Sewage works proposed under Limited Operational Flexibility shall adhere to the design guidelines contained within the Ministry's publication "Design Guidelines for Sewage Works 2008", as amended.

(3) The Owner shall ensure at all times, that the Works, related equipment and appurtenances which are installed or used to achieve compliance are operated in accordance with all terms and conditions of this Approval.

(4) For greater certainty, the following are not permitted as part of Limited Operational Flexibility:

(a) modifications to the Works that result in an increase of the approved Rated Capacity of the sewage treatment plants;

(b) modifications to the Works that may adversely affect the approved effluent quality criteria or the location of the discharge/outfall;

(c) modifications to the treatment process technology of the Works, or modifications that involve construction of new reactors (tanks) or alter the treatment train process design;

(d) modifications to activities mentioned in sub-section 9(1) of the EPA;

(e) modifications to the Works pursuant to an order issued by the Ministry;

(f) modifications to Works that are part of an Undertaking for which a request to issue a Part II Order has been submitted to the Ministry;

(g) modifications to Works that are part of an Undertaking for which a Part II Order has been issued by the Minister; and

(h) modifications to Works that will trigger the Duty to Consult.

(5) Implementation of Limited Operational Flexibility is not intended to be used for piecemeal measures that result in major alterations or expansions.

(6) If the implementation of Limited Operational Flexibility requires changes to be made to the Emergency Response, Spill Reporting and Contingency Plan, the Owner shall, as deemed necessary in consultation with the Water Supervisor, provide a revised copy of this plan to the local fire services authority prior to implementing Limited Operational Flexibility.

(7) For greater certainty, any modification made under the Limited Operational Flexibility may only be carried out after other legal obligations have been complied with, including those arising from the Environmental Protection Act, Environmental Assessment Act, Niagara Escarpment Planning and Development Act, Oak Ridges Moraine Conservation Act, Lake Simcoe Protection Act and Greenbelt Act.

DRAFT

(8) At least thirty (30) days prior to implementing Limited Operational Flexibility, the Owner shall complete a Notice of Modifications describing any proposed modifications to the Works and submit it to the Water Supervisor.

(9) The Owner shall ensure that an engineering assessment is completed for each Notice of Modifications prior to submitting the Notice of Modifications to the Water Supervisor. The engineering assessment shall be prepared by a Professional Engineer. The Owner shall abide by the recommendations made under the engineering assessment for the Proposed Works. The engineering assessment shall include, at minimum, the following:

(a) description of the Proposed Works;

(b) the documentation and drawings that were reviewed;

(c) regulatory requirements applicable to the Proposed Works;

(d) technical criteria used to assess the Proposed Works;

(e) any issues that were identified during the engineering review of the Proposed Works;

(f) source water protection considerations; and

(g) recommendations.

(10) Upon the Substantial Completion of Proposed Works, the Owner shall prepare a statement, certified by a Professional Engineer, that the works are constructed in accordance with the Notice of Modifications, and upon request, shall make the written statement available for inspection by Ministry personnel.

(11) Within twelve (12) months of the Substantial Completion of Proposed Works, a set of as-built drawings showing the Proposed Works "as constructed" shall be prepared. These drawings shall be kept up to date through revisions undertaken from time to time, and be made available upon Ministry request.

2.8 ASSUMPTION OF OWNERSHIP OF SEWAGE WORKS

(1) The Owner may make modifications to the Works in accordance with the terms and conditions of this Approval and subject to sub-sections (2), (3) and (4) of this condition.

(2) The Owner may add Assumed Works to this Approval, provided that:

(a) the transfer of the ownership of the sewage works to the Owner is complete;

(b) the previous owner of the sewage works has notified the Director of the change in ownership; and

(c) the Assumed Works are part of the municipal sanitary sewage Works utilized for the

DRAFT

collection and transmission of sanitary sewage in the Regional Municipality of Peel that are connected to the G. E. Booth Lakeview Wastewater Treatment Facility, Clarkson Wastewater Treatment Facility and Inglewood Wastewater Treatment Facility.

(3) To add Assumed Works to this Approval, the Owner shall complete a Notice of Assumption and submit it to the Water Supervisor, along with a copy of the approval issued to the sewage works prior to the transfer of ownership.

(4) Upon submission of the Notice of Assumption to the Water Supervisor, the terms and conditions of this Approval apply to the Assumed Works for which the Notice of Assumption has been submitted.

2.9 REVIEW OF APPROVAL

(1) No later than six (6) months past the fifth anniversary of the date of issuance of this Approval, the Owner shall submit to the Director an application to have the Approval reviewed. The application shall include, at minimum, the following information:

(a) an updated description of the Works, including any modifications to the Works that were made during the five (5) year period in accordance with the terms and conditions of this Approval and subject to the Ministry's "Limited Operational Flexibility Criteria for Modifications to Municipal Sewage Works", included under Schedule C of this Approval, as amended;

(b) a copy of all Notice of Modifications submitted to the Water Supervisor as a result of Schedule C, Section 1(1), with the engineering assessment for each Notice of Modifications;

(c) a status report on the implementation of each modification;

(d) a copy of all Notice of Assumptions submitted to the Water Supervisor as a result of Condition 2.8, along with a copy of the approval issued to each sewage works that were assumed;

(e) a performance report on the operation and maintenance of the Works; and

(f) the application form.

DRAFT

3.0 Reasons

The reasons for the imposition of these terms and conditions are as follows:

3.1 Condition 2.1 is imposed to ensure that the Works are constructed and operated in the manner in which they were described and upon which approval was granted. This condition is also included to emphasize the precedence of conditions in the Approval and the practice that the Approval is based on the most current document, if several conflicting documents are submitted for review.

3.2 Condition 2.2 is included to ensure that the Ministry records are kept accurate and current with respect to approved Works and to ensure that subsequent owners of the Works are made aware of the Approval and continue to operate the Works in compliance with it.

3.3 Condition 2.3 is included to indicate that Sewage Pumping Station Overflows are prohibited, except in circumstances where the failure to overflow could result in greater injury to the public interest than the Sewage Pumping Station Overflow itself. The notification and documentation requirements allow the Ministry to take action in an informed manner and ensure that the Owner is aware of the extent and frequency of Events.

3.4 Condition 2.4 is included to ensure that the Works are properly operated, maintained, funded, staffed and equipped such that the environment is protected and deterioration, loss, injury or damage to any person or property is prevented. The Condition also ensures that a comprehensive operations manual governing all significant areas of operation, maintenance and repair is prepared, implemented and kept up-to-date by the Owner and is made available to the Ministry. Such a manual is an integral part of the operation of the Works. Its compilation and use should assist the Owner in staff training, proper plant operation, and identification and planning for contingencies during abnormal conditions. The manual will also act as a benchmark for Ministry staff when reviewing the operation of the Works.

3.5 Condition 2.5 is included to provide additional details on the monitoring of Sewage Pumping Station Overflows.

3.6 Condition 2.6 is included to provide a performance record for future references, to ensure that the Ministry is made aware of problems as they arise, and to provide a compliance record for all the terms and conditions outlined in this Approval, so that the Ministry can work with the Owner in resolving any problems in a timely manner.

3.7 Condition 2.7 is included to ensure that the Works are operated in accordance with the application and supporting documentation submitted by the Owner, and not in a manner which the Director has not been asked to consider. These conditions are also included to ensure that a Professional Engineer has reviewed the proposed modifications and attests that the modifications are in line with that of Limited Operational Flexibility, and provide assurance that the proposed modifications comply with the Ministry's requirements stipulated in the terms and conditions of this Approval, Ministry policies, guidelines, and industry engineering standards and best management practices.

3.8 Condition 2.8 is included to specify the requirements that need to be met by the Owner to add Assumed Works to this Approval.

DRAFT

3.9 Condition 2.9 is included to ensure that the Approval is updated on a regular basis by the Owner.

DRAFT

Schedule C: Limited Operational Flexibility

System Owner and Operator	**The Regional Municipality of Peel**
System Name	**Sanitary Collection System servicing the G. E. Booth Lakeview Wastewater Treatment Facility, the Clarkson Wastewater Treatment Facility and the Inglewood Wastewater Treatment Facility**

Schedule C includes:

1.0 Limited Operational Flexibility Criteria for Modifications to Municipal Sewage Works

2.0 Notice of Modification to Sewage Works

DRAFT

1.0 Limited Operational Flexibility Criteria for Modifications to Municipal Sewage Works

1. The modifications to sewage works approved under an Environmental Compliance Approval (Approval) that are permitted under the Limited Operational Flexibility (LOF), are outlined below and are subject to the LOF conditions in the Approval, and require the submission of the Notice of Modifications. If there is a conflict between the sewage works listed below and the Terms and Conditions in the Approval, the Terms and Conditions in the Approval shall take precedence.

1.1 Sanitary Sewers and Sanitary Forcemains

a. Alteration, extension, enlargement or replacement of new or existing sanitary sewers and sanitary forcemains, provided that:

i. the nominal pipe diameter is not greater than 1,200 millimetres;

ii. the sewers and mains are not combined sewers;

iii. the sewers and mains do not discharge directly to a sewage treatment plant;

iv. the design of the modification to or establishment of the sewers and mains has been prepared by a Professional Engineer; and

v. the consent of the property owner has been obtained for the establishment of new sewers and mains.

1.2 Sewage Pumping Stations

a. Altering pumping station capacity by adding or replacing equipment within an existing sanitary sewage pumping station site, provided that the modifications do not result in an increase in the Rated Capacity of the sewage treatment plants and the existing flow processes are maintained, as applicable.

1.3 Flow Regulators, Storage Tanks and Pressure Release Valves

a. Alteration of capacity by adding or replacing equipment, structures or instrumentation in the sanitary sewage collection system, provided that the modifications do not result in an increase in the Rated Capacity of the sewage treatment plants and that the existing flow processes are maintained.

1.4 Pilot Systems

a. Installation of pilot systems for new or existing technologies provided that:

i. any effluent from the pilot system is discharged to the inlet of the sewage pumping station or hauled off-site for proper disposal;

ii. any effluent from the pilot system discharged to the inlet of the sewage pumping station or sewage conveyance system does not significantly alter the composition/concentration of the influent sewage

DRAFT

to be treated in the downstream process; and that it does not add any inhibiting substances to the downstream process; and

iii. the pilot system's duration does not exceed a maximum of two (2) years; and a report with results is submitted to the Director and Water Supervisor three (3) months after the completion of the pilot project.

2. Sewage works that are exempt from section 53 of the OWRA by O. Reg. 525/98 continue to be exempt and are not required to follow the notification process under this Limited Operational Flexibility.

3. Normal or emergency operational modifications, such as repairs, reconstructions, or other improvements that are part of maintenance activities, including cleaning, renovations to existing approved sewage works equipment, provided that the modification is made with Equivalent Equipment, are considered pre-approved.

4. The modifications noted in sub-section (3) above are not required to follow the notification protocols under Limited Operational Flexibility, provided that the number of pieces and description of the equipment as described in the Approval does not change.

2.0 Notice of Modification to Sewage Works

Ontario
Ministry of
the Environment

Notice of Modification to Sewage Works

RETAIN COPY OF COMPLETED FORM AS PART OF THE ECA AND SEND A COPY TO THE WATER SUPERVISOR (FOR MUNICIPAL) OR DISTRICT MANAGER (FOR NON-MUNICIPAL SYSTEMS)

Part 1 – Environmental Compliance Approval (ECA) with Limited Operational Flexibility

(Insert the ECA's owner, number, issuance date and notice number, which should start with "01" and consecutive numbers thereafter)

ECA Number	Issuance Date (mm/dd/yy)	Notice number (if applicable)

ECA Owner	Municipality

Part 2: Description of the modifications as part of the Limited Operational Flexibility

(Attach a detailed description of the sewage works)

Description shall include:
1. A detail description of the modifications and/or operations to the sewage works (e.g. sewage work component, location, size, equipment type/model, material, process name, etc.)
2. Confirmation that the anticipated environmental effects are negligible.
3. List of updated versions of, or amendments to, all relevant technical documents that are affected by the modifications as applicable, i.e. submission of documentation is not required, but the listing of updated documents is (design brief, drawings, emergency plan, etc.)

Part 3 – Declaration by Professional Engineer

I hereby declare that I have verified the scope and technical aspects of this modification and confirm that the design:
1. Has been prepared or reviewed by a Professional Engineer who is licensed to practice in the Province of Ontario;
2. Conforms with the Limited Operational Flexibility as per the ECA;
3. Has been designed consistent with Ministry's Design Guidelines, adhering to engineering standards, industry's best management practices, and demonstrating ongoing compliance with s.53 of the Ontario Water Resources Act; and other appropriate regulations.

I hereby declare that to the best of my knowledge, information and belief the information contained in this form is complete and accurate.

Name (Print)	PEO License Number

Signature	Date (mm/dd/yy)

Name of Employer

Part 4 – Declaration by Owner

I hereby declare that:
1. I am authorized by the Owner to complete this Declaration;
2. The Owner consents to the modification; and
3. These modifications to the sewage works are proposed in accordance with the Limited Operational Flexibility as described in the ECA.
4. The Owner has fulfilled all applicable requirements of the *Environmental Assessment Act*.

I hereby declare that to the best of my knowledge, information and belief the information contained in this form is complete and accurate.

Name of Owner Representative (Print)	Owner representative's title (Print)

Owner Representative's Signature	Date (mm/dd/yy)

DRAFT

Upon issuance of the environmental compliance approval, I hereby revoke Approval No(s). 5523-9ZBPUW, 5127-835SBH, 7910-7T9JUA, 0000-53FPQY, 4396-7GLPMB, 1425-7GCQJS, 4007-7G6Q82, 5016-7AMSSQ, 2278-75EQPT, 0284-6Y7JS4, 8062-6TMHL2, 8230-6CBM2R, 6071-69GQ5M, 9922-5RNH3Q, 7350-5UWJXF, 6027-5M3K5E, 8960-5ACPM6, 5017-4XAP2N, 7003-4LKNQE, 5472-4LBLKG, 8-3102-94-006, 3-0588-91-006, 9656-AB4QAM, 3945-5ZLKNA, 4767-8ESSM7, 9128-9G3L5X, 5800-9AKMXQ, 9821-7BASN5, 4-0145-89-916, 3-1014-95-006, 3-1313-94-006, 8-3357-92-006, 8-3135-91-926, 8-3058-90-006, 3-0414-87-006, 3-0089-86-006 and 1-459-77-006 issued on August 25, 2015, October 3, 2010, November 7, 2008, October 7, 2008, September 1, 2008, March 8, 2007, December 2, 2007, July 1, 2004, August 6, 2001, February 5, 1994, December 6, 1991, December 7, 2016, June 7, 2004, June 3, 1991, October 8, 1995, January 11, 1994, April 9, 1987 and April 3, 1986.

In accordance with Section 139 of the Environmental Protection Act, you may by written Notice served upon me and the Environmental Review Tribunal within 15 days after receipt of this Notice, require a hearing by the Tribunal. Section 142 of the Environmental Protection Act provides that the Notice requiring the hearing shall state:

a. The portions of the environmental compliance approval or each term or condition in the environmental compliance approval in respect of which the hearing is required, and;
b. The grounds on which you intend to rely at the hearing in relation to each portion appealed.

Pursuant to subsection 139(3) of the Environmental Protection Act, a hearing may not be required with respect to any terms and conditions in this environmental compliance approval, if the terms and conditions are substantially the same as those contained in an approval that is amended or revoked by this environmental compliance approval.

The Notice should also include:

1. The name of the appellant;
2. The address of the appellant;
3. The environmental compliance approval number;
4. The date of the environmental compliance approval;
5. The name of the Director, and;
6. The municipality or municipalities within which the project is to be engaged in.

And the Notice should be signed and dated by the appellant.

This Notice must be served upon:

The Secretary*
Environmental Review Tribunal
655 Bay Street, Suite 1500
Toronto, Ontario
M5G 1E5

AND

The Director appointed for the purposes of Part II.1 of the Environmental Protection Act

Well Record - Regulation 903

Ontario Water Resources Act

Notice of Collection of Personal Information

Personal information contained on this form is collected pursuant to sections 35-50 and 75(2) of the *Ontario Water Resources Act* and section 16.3 of the Wells Regulation. This information will be used for the purpose of maintaining a public record of wells in Ontario. This form and the information contained on the form will be stored in the Ministry's well record database and made publicly available. Questions about this collection should be directed to the Water Well Customer Service Representative at the Wells Help Desk, 125 Resources Road, Toronto Ontario M9P 3V6, at 1-888-396-9355 or wellshelpdesk@ontario.ca.

Photograph 26: View of Hiawatha SPS exterior (76 Cumberland Dr) at Hiawatha Park, from Hiawatha Pkwy and Cumberland Dr, facing south.

Photograph 27: View of Hiawatha SPS exterior (76 Cumberland Dr) at Hiawatha Park, from Hiawatha Pkwy and Cumberland Dr, facing west.

Photograph 28: View of Hiawatha SPS interior, showing backup generator, facing west.

Photograph 29: View of Hiawatha SPS interior, showing double walled diesel fuel tank (3/4 full), facing west.

APPENDIX J:
NEIGHBOURING PROPERTY DETAILS

DRAFT

Date:	9/12/2022	File:	719033
To:	GMBP Team		
From:	Mark Ongarato		
Project:	Port Credit East Water and Wastewater Servicing Optimization Strategy Schedule C Class Environmental Assessment		
Subject:	Adjacent and Neighbouring Property Uses Site Visit Notes		

TECHNICAL MEMO

For the purposes of this memo, the direction "north" means the direction along Hurontario Street toward Highway 403. Neighbouring lands are listed in order of closest to furthest from the site.

Notes:
Items in Blue text represent observations from site reconnaissance that are considered to indicate the most significant properties or structures within the project Study Area and outside of the immediate 100 m study area of each Site.
Items in Red text represent observations from site reconnaissance that are considered to indicate the most significant properties or structures within the project Study Area and are within the immediate 100 m study area of a particular Site.

Rosemere (ROS_1)
Site description:
Paved residential street (Rosemere Rd.)

Position Relative to Site	Neighbouring Lands Description
North	Residential housing.
East	Open area (grassed area) & residential housing.
South	east/west drainage channel (Mary Fix Creek) flowing west towards the Credit River, Train tracks (east/west), railway crossing (@ Stavebank Rd.), GO Train station parking lot.
West	Residential housing, parkland, Credit River.

Rosemere (ROS_2)
Site description:
Paved residential street (Sandham Rd.)

Position Relative to Site	Neighbouring Lands Description
North	Residential housing.
East	Residential housing, Vesta drive, GO train parking lot.
South	Some domestic garbage / dumping (empty cans, doggy bags, garbage bags) on the south side of Sandham Rd. along fence line (appears minor), east/west drainage channel (Mary Fix Creek) flowing west towards Credit River, GO Train station.
West	Residential housing, Mona Street.

DRAFT

Lakeshore (LAK_3)
Site description:
Paved parking lot @ 3 Elmwood Ave. N. Three (3) flush mount monitoring wells were found in the parking lot; one located on the site's east side, and two located on the site's west side.

Position Relative to Site	Neighbouring Lands Description
North	Residential housing.
East	LCBO, Woodlawn Ave, residential housing (townhouse residential).
South	Strip mall / building (on the south side of Lakeshore Rd. E.) that includes the following businesses: • Thrift store, • Tanning studio, • Convenience store, • Pet store, • Washpro Coin laundry (195 Lakeshore Rd E) • Animal hospital, • Karate studio, • Driving school, • Thai food restaurant
West	Wing Porium (pub), Elmwood Meat Market, available space for lease, and a Midas auto garage (two bays) (160 Lakeshore Rd. E.). The Space for lease is currently slightly boarded up with some homeless sleeping outside of the building.

DRAFT

Elmwood (ELM_4)
Site description:
Elmwood Ave. S. @ Wanita Rd. (paved T-intersection) in a residential area

Position Relative to Site	Neighbouring Lands Description
North	Residential housing, Lakeshore Rd. E. (approximately 200 m away), Strip mall / building (on the south side of Lakeshore Rd. E.) that includes the following businesses: • Thrift store, • Tanning studio, • Convenience store, • Pet store, • Washpro Coin laundry (195 Lakeshore Rd E) • Animal hospital, • Karate studio, • Driving school, • Thai food restaurant
East	Residential housing.
South	Carlis Place, Tall Oaks Park (44 Elmwood Ave. S.), Elmwood SPS (60 Elmwood Ave S, Lake Ontario.
West	Residential housing.

Elmwood (ELM_5)
Site description
St Lawrence Park (75 St. Lawrence Dr.). irrigation system in the green space / grassed area of the park

Position Relative to Site	Neighbouring Lands Description
North	Residential housing, Lakeshore Rd. E. (approximately 325 m away, NNE), Strip mall / building (on the south side of Lakeshore Rd. E.) that includes the following businesses: • Thrift store, • Tanning studio, • Convenience store, • Pet store, • Washpro Coin laundry (195 Lakeshore Rd E) • Animal hospital, • Karate studio, • Driving school, • Thai food restaurant
East	Playground structure, Natural preservation area (naturalization), Elmwood SPS (60 Elmwood Ave. S.), Tall Oaks Park (44 Elmwood Ave. S.).
South	Lake Ontario.
West	Waterfront trail, park space, Port Credit Harbour Marina (350m away).

Executive Summary

Content

Paradigm Transportation Solutions Limited (Paradigm) was retained by GM BluePlan Engineering Limited (the client) to conduct a Traffic Impact Study for the Port Credit East Water and Wastewater Servicing Optimization Strategy currently being undertaken for the Region of Peel. The study is required as part of the Municipal Class Environmental Assessment.

The Traffic Impact Study includes a description of the impacted sites, an assessment of existing traffic conditions, and future traffic conditions without and during construction. The study analyzes traffic impacts on the adjacent roadway network for the proposed construction plans, and recommends of any necessary improvements to the study area intersections to maintain acceptable traffic operations during construction.

The findings, conclusions, and recommendations of this study are summarized below and outlined in further detail in the body of the report.

Conclusions

Based on the investigations carried out, it is concluded that:

- For the Port Credit East Water and Wastewater Servicing Optimization Strategy, the components include works related to the Rosemere Sewage Pumping Station (SPS), the Lakeshore Road Sub-Transmission Watermain and Trunk Sewer, and both the Elmwood and Hiawatha Sewage Pumping Stations (SPSs) as part of a Schedule C Municipal Class Environmental Assessment (EA).
- Works related to the **Rosemere SPS** component will result in minor impacts on the nearby residential homes. A total of three residential homes on Rosemere Road will be impacted by the proposed lane reduction on Rosemere Road.

  As the roadway is discontinuous, and access to the residential homes will be maintained, the overall transportation impact is considered minor, and no roadway or intersection geometric improvements are determined to be required during construction.
- Works related to the **Lakeshore Road Sub-Transmission Watermain and Trunk Sewer** component will occupy and displace parking. That is, Municipal Lot #2 and #4 will be

occupied for construction activities. While parking is anticipated to be displaced, the associated tunnelling activities will not result in any surface disturbance along Lakeshore Road.

No major traffic impacts are anticipated with the proposed construction activities, that is, intersection operations and roadway capacity along Lakeshore Road will not be impacted.

Regarding the displaced parking spaces at Municipal Lot #2, parking demands will be accommodated by adjacent Municipal Lots #1 and #3, as well can be accommodated by the public parking lot on the south side of Lakeshore Road. Displaced parking at Municipal Lot #4, will be replaced with a temporary parking lot proposed at the Harold E. Kennedy Park.

- Works related to the **Elmwood and Hiawatha SPSs** component will result in traffic redistribution to adjacent intersections due to the planned partial intersections closures of Lakeshore Road East/Elmwood Avenue North and Elmwood Avenue South/Wanita Road, and the full intersection closure of Hiawatha Parkway/Wanita Road.

  It is noted the road closure of Elmwood Avenue North, north of Lakeshore Road, the related construction works will occur following the Lakeshore Road Sub-Transmission Watermain and Trunk Sewer construction.

  - Under the assessed **2024 and 2028 horizons without SPS construction**, the study area intersections are forecast to operate at acceptable levels of service and well within capacity; and
  - Under the assessed **2024 and 2028 horizons during SPS construction**, operations at the study area intersections are reported to be similar to 2024 and 2028 conditions without construction.

    The traffic variation due to traffic redistribution is found to be minor. All intersections and traffic movements are forecast to continue operating at acceptable levels of service and within capacity during all peak periods.
  - No road and/or operational traffic control improvements are anticipated to be required to accommodate the construction stage.

- Overall, the construction works related to all components is considered minor and is anticipated to generate minimal disruption. As a result of the planned works, appropriate Construction and Traffic Management Plans (temporary diversions of pedestrian walkways, traffic control persons, temporary signage, etc.) will be developed.

Recommendations

Based on the findings of this study, it is recommended the City of Mississauga and Region of Peel recognize the conclusions drawn above.

Appropriate Construction Management Plans be developed for each component and implemented to ensure any potential conflicts are minimized.

1 Introduction

1.1 Project Background

GM BluePlan Engineering Limited retained Paradigm Transportation Solutions Limited (Paradigm) to conduct a traffic impact assessment for works related to the Port Credit East Water and Wastewater Servicing Optimization Strategy.

Specifically, the components of the strategy include works related to the Rosemere Sewage Pumping Station (SPS), the Lakeshore Road Sub-Transmission Watermain and Trunk Sewer, and both the Elmwood and Hiawatha Sewage Pumping Stations (SPS) as part of a Schedule C Municipal Class Environmental Assessment (EA).

This study assesses and identifies any potential transportation impacts to residents and businesses in proximity to the anticipated construction sites, and the need for any road and/or operational traffic control improvements to address any identified impacts.

Figure 1.1 illustrates the locations and extents of anticipated works. The study areas assessed captures the potential intersections that could be impacted by the planned construction zones.

1.2 Purpose and Scope

The purpose of this report is to identify and review any existing and future traffic operational deficiencies at study area intersections associated with the anticipated construction work.

A traffic impact study is required as part of the Municipal Class EA to:

- Assess the existing operations at study area intersections;
- Analyze the existing and forecasted operational level of service and volume-to-capacity ratio of the subject study area locations; and
- Provide recommendations to improve the function of the surrounding transportation infrastructure, if required.

The anticipated construction and works related to the Rosemere SPS, and Lakeshore Road Sub-Transmission Watermain and Trunk Sewer component sites are not anticipated to require any significant road and/or intersection closures based upon the strategies conveyed by GM BluePlan. These two sites will be discussed further within subsequent sections of this study.

Construction and activities related to both the Elmwood and Hiawatha Sewage Pumping Station sites will require partial road and full intersection closures based upon the strategies conveyed by GM BluePlan. To assess the traffic impacts due to the construction works, the following scope of work has been undertaken:

- A study area comprising the following intersections:
  - Lakeshore Road East and Rosewood Avenue (unsignalized);
  - Lakeshore Road East and Elmwood Avenue (signalized);
  - Lakeshore Road East and Woodlawn Avenue (unsignalized);
  - Lakeshore Road East and Cumberland Drive (signalized);
  - Lakeshore Road East and Hiawatha Parkway (signalized);
  - Lakeshore Road East and Wenonah Drive (unsignalized);
  - Wanita Road and Elmwood Avenue (unsignalized);
  - Wanita Road and Cumberland Drive (unsignalized);
  - Wanita Road and Hiawatha Parkway (unsignalized); and
  - Wanita Road and Wenonah Drive (unsignalized).
- Analysis time periods including the weekday AM and PM peak hours;
- Traffic forecasts for 2024 and 2028 (anticipated period of construction year); and
- Traffic redistribution due to partial/complete closure of the intersections of Lakeshore Road East/Elmwood Avenue, Wanita Road/Elmwood Avenue South, and Wanita Road/Hiawatha Parkway.

The traffic impact assessment will address the following:

- Traffic impacts on the adjacent roadway network from the proposed construction plans; and
- Identify necessary recommendations of any improvements to the study area intersections to maintain acceptable traffic operations during the construction period.

The purpose of assessing traffic operations:

- Prior to construction, is to establish a profile of existing conditions primarily for comparison and benchmarking purposes; and

- During construction, is to identify traffic impacts likely to arise during the construction period and assess measures to mitigate/address any issues or concerns.

This study has been carried out in general accordance with the *City of Mississauga Traffic Impact Study Guidelines*[1].

[1] City of Mississauga, *Traffic Impact Study Guidelines*.

paradigm TRANSPORTATION SOLUTIONS LIMITED

Study Area
Work Component Locations

2 Preferred Construction Strategy

The following sites related to the Port Credit East Water and Wastewater Servicing Optimization Strategy will require work due to condition, maintenance and performance issues at the following component sites.

Figure 2.1 to **Figure 2.3** illustrates mapping of the preferred preliminary strategy for each site illustrating the approximate shaft compound locations, and approximate limits of construction. As we understand the anticipated duration of construction will be between 12 to 18 months for each component, with construction staggered between 2024 and 2028.

- **Rosemere Sewage Pumping Station (SPS)**:
  - Construction related to shaft compounds in proximity to the Rosemere SPS will require partial closure of Rosemere Road, while Sandham Road between Mona Road and Vesta Drive will require full closure to accommodate the construction shaft compound areas.
  - Rosemere Road is a discontinuous roadway and provides access to three residential homes. The roadway provides one travel lane in each direction and to facilitate the necessary construction, Rosemere Road will be reduced to a single lane for both directions of traffic. Given the low volume of local traffic, no major traffic impacts are anticipated with single-lane traffic operations.
  - Sandham Road between Mona Road and Vesta Drive will be closed to vehicular traffic. No major traffic impacts are anticipated with this closure as it does not facilitate access to any properties, and access to adjacent homes on Mona Road and Vesta Drive will not be impacted. It is noted that the access to the vacant lot at the south end of Mona Road, west of Sanham Road will be provided.

    It is anticipated the pedestrian connection situated at the east end of Sandham Road with the Port Credit GO Station parking lot will be maintained.
- **Lakeshore Road (Sub-Transmission Watermain and Trunk Sewer)**:
  - Two shaft compound locations are identified as related to the Front Street Sewage Pumping Station. They are located in the northeast quadrant of the Front Street/Lakeshore Road West intersection within Marina Park and adjacent municipal

parking lot (Lot #2), and in the northeast quadrant of the Elmwood Avenue North/Lakeshore Road East intersection within the municipal parking lot (Lot #4). **Figure 2.4** illustrates the locations of the adjacent municipal parking lots within Port Credit.

- The anticipated work will consist of two components, Trunk Sewer and a new Sub-Transmission Watermain tunneled along Lakeshore Road.
- For both pieces of infrastructure, all associated tunnelling work will not result in any surface disturbance along Lakeshore Road.
- No major traffic impacts are anticipated with the proposed construction activities, that is, intersection operations and roadway capacity along Lakeshore Road.

- **Elmwood and Hiawatha Sewage Pumping Stations (SPSs)**:
  - Six shaft compound locations are required as part of the Elmwood and Hiawatha SPS component. It is noted regarding the red lines on Figure 2.3, no lane reductions or surface disturbances will occur. That is, along Elmwood Avenue South, Wanita Road, and Hiawatha Parkway.
    - An area situated south of St. Lawrence Drive, west of the Elmwood SPS will be occupied. No impacts to St. Lawrence Drive are anticipated as the roadway will not be impacted; however, the adjacent Waterfront Trail may potentially be impacted. As we understand the intent is to maintain or provide the existing active transportation facility while construction is occurring.
    - An area at the south end of Elmwood Avenue South, just south of Carlis Place. This construction zone is not anticipated to result in any direct traffic impacts to adjacent residents; however, the adjacent construction area of Elmwood Avenue South/Wanita Road will impact access for the residents south of Wanita Road.
    - The intersection of Elmwood Avenue South/Wanita Road is planned to be partially closed.

      The north leg of the intersection will be fully closed (i.e., no local traffic permitted). Aforementioned, the full closure of the north leg of the intersection will impact access for the residents south of Wanita Road (i.e., minor detouring will be required).

The east and south legs of the intersection will be reduced to a single lane to serve each travel direction for local traffic access.

- The intersection of Hiawatha Parkway/Wanita Road is planned to be fully closed. No local traffic will be permitted through this location requiring residents to utilize alternative travel routes within the neighbourhood.
- The area in immediate proximity surrounding the Hiawatha SPS situated at the south end of Hiawatha Parkway. The intersection of Hiawatha Parkway/Cumberland Drive is anticipated to remain open for all traffic.
- The intersection of Lakeshore Road East/Elmwood Avenue is planned to be partially closed.

  The north leg of the intersection will be fully closed (i.e., no local traffic permitted) to facilitate connection to existing maintenance holes. Traffic to and from the north leg will require minor detouring.

The following sections of this study focuses on the Elmwood and Hiawatha SPS construction impacts, as the associated construction plans involving partial/full intersection closures which has a direct impact on vehicular traffic and routing.

For the remaining components (i.e., Rosemere SPS and Lakeshore Road), it is anticipated the transportation impacts would be minor and can be accommodated by the existing transportation network due to the lack of surface disturbance and no roadway or intersection closures. **Section 6** provides additional discussion and provides an impact assessment summary of all associated components.

3 Existing Conditions

3.1 Road Network Characteristics

The characteristics of the roads and intersections for the study area related to the Elmwood and Hiawatha SPSs component are described below. Reference is made to *Schedule 5 – Long Term Road Network*[2] of the City of Mississauga Official Plan for roadway classification.

- **Lakeshore Road East** is an east-west arterial roadway with four travel lanes (two lanes in each direction) within the study area limits. The roadway has a posted speed limit of 50 km/h;
- **Wanita Road** is an east-west local roadway with two travel lanes (one lane in each direction) within the study area limits. The posted speed limit is 40 km/h;
- **Rosewood Avenue** is a north-south local roadway with two travel lanes (one lane in each direction) within the study area limits. The roadway has a posted speed limit of 40 km/h;
- **Elmwood Avenue** is a north-south local roadway with two travel lanes (one lane in each direction) within the study area limits. The posted speed limit is 40 km/h;
- **Woodlawn Avenue** is a north-south local roadway with two travel lanes (one lane in each direction) within the study area limits. The roadway has a posted speed limit of 40 km/h;
- **Cumberland Drive** is a north-south local roadway with two travel lanes (one lane in each direction) within the study area limits. The posted speed limit is 40km/h;
- **Hiawatha Parkway** is a north-south local roadway with two travel lanes (one lane in each direction) within the study area limits. The posted speed limit is 40 km/h. Hiawatha Parkway continues as Mohawk Avenue north of Lakeshore Road East; and
- **Wenonah Drive** is a north-south local roadway with two travel lanes (one lane in each direction) within the study area limits. The roadway has a posted speed limit of 40 km/h;

Within the study area there are three signalized intersections formed with Lakeshore Road East. Full traffic signals exist at Cumberland Drive, and Hiawatha Parkway, while Intersection Pedestrian Signal (IPS) provisions are provided at the Elmwood Avenue intersection.

[2] City of Mississauga, *Official Plan, Schedule 5 – Long Term Road Network*, October 2021.

The intersection of Elmwood Avenue South/Wanita Road operates unsignalized, with stop control provided on the Wanita Road approach.

The intersections of Lakeshore Road East with Rosewood Avenue and Woodlawn Avenue operate unsignalized, with stop control provided on the minor road approaches (i.e., Rosewood Avenue and Woodlawn Avenue).

The intersection of Lakeshore Road East/Wenonah Drive operates unsignalized, with stop control provided on the Wenonah Drive approach. It is noted the northbound approach provides enough pavement width to accommodate two vehicles (i.e., a vehicle waiting to make a left-turn movement onto Lakeshore Road, while another vehicle wanting to make a right-turn movement onto Lakeshore Road can fit).

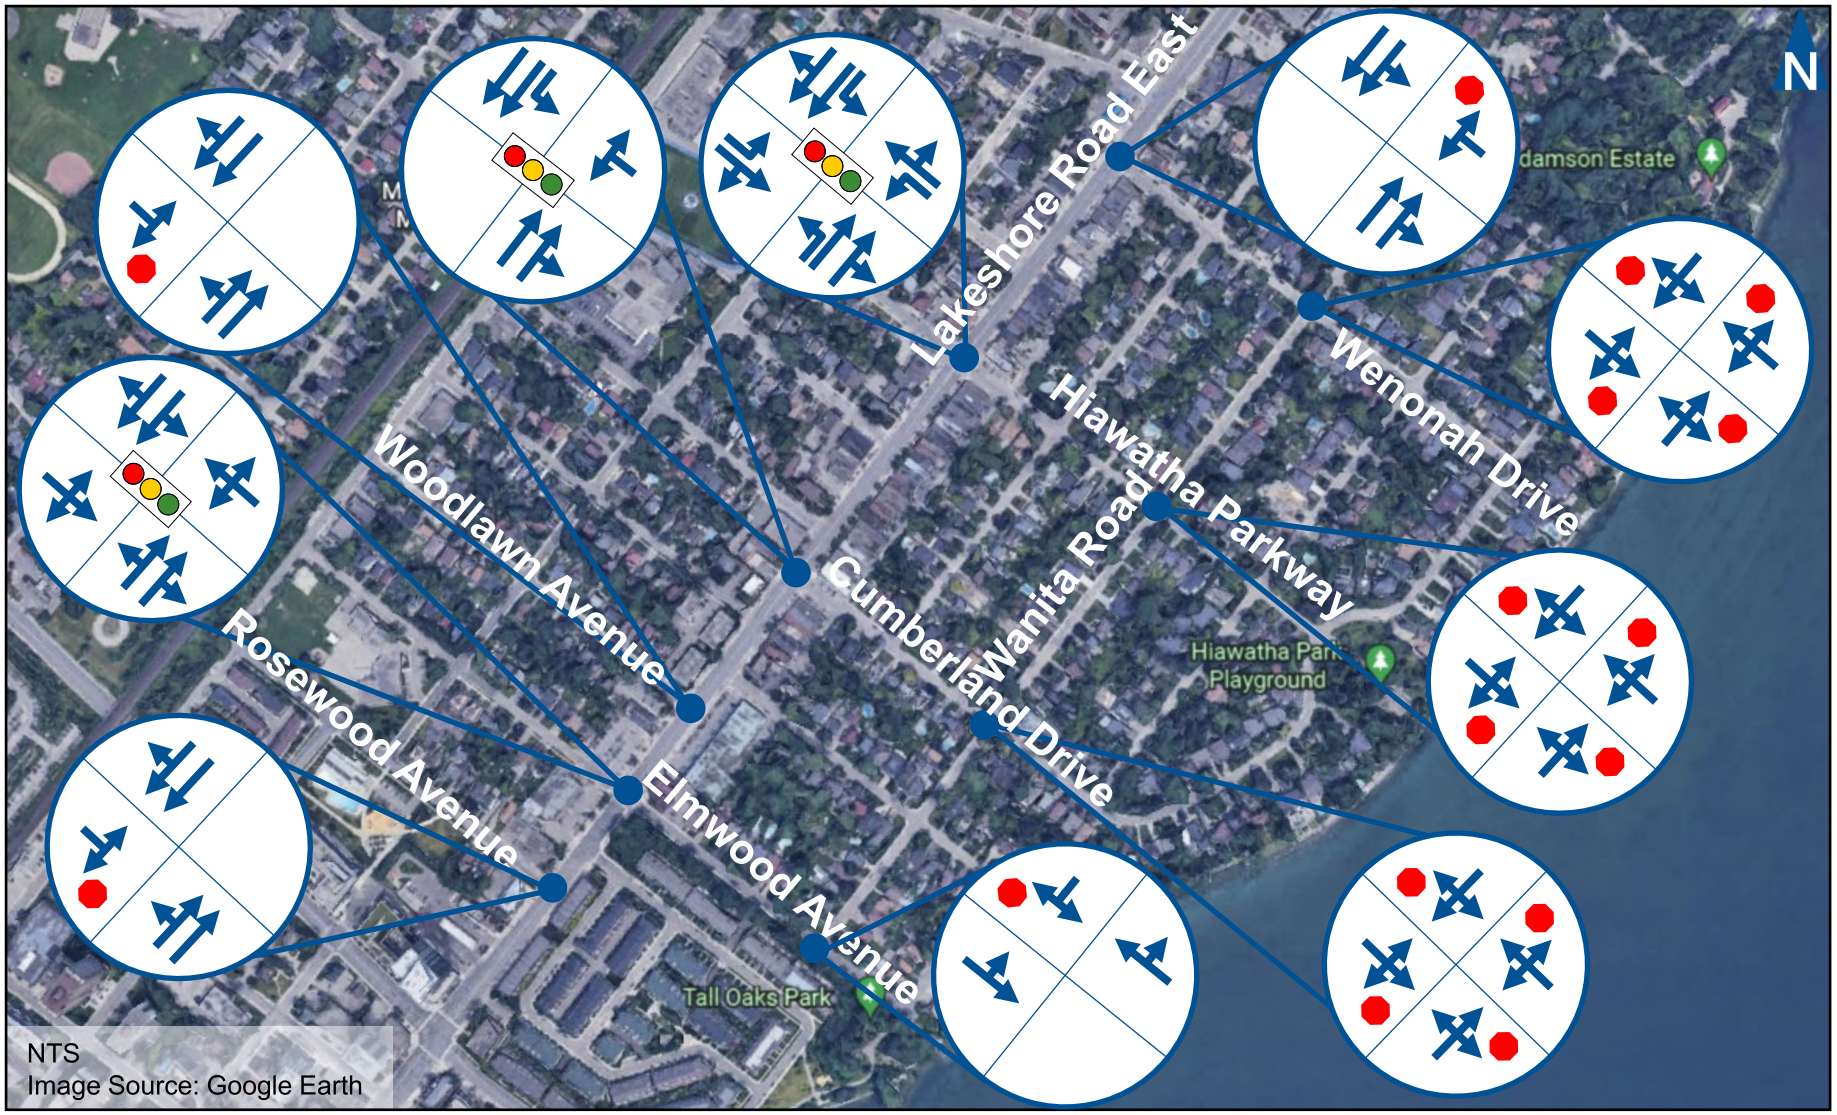
The remaining study area intersections all operate unsignalized with all-way stop-control (i.e., 4-way stop).

Figure 3.1 illustrates the existing lane configurations and traffic control at the study area intersections.

3.2 Traffic Volumes

To assess intersection operations, turning movement counts (TMCs) are used to quantify the movement of vehicles, pedestrians, trucks, buses, and cyclists through an intersection. Existing traffic data at an intersection or on a road section forms the foundation for operational analysis. The counts are usually collected during peak periods to complete level of service (LOS) analysis under its worst-case operating conditions.

Paradigm collected TMCs at the study area intersections on 08 November 2022 (Tuesday) and 05 April 2023 (Wednesday). The data was counted in 15-minute intervals and vehicles were classified by type. From the counts, the respective AM peak hour and PM peak hour for each intersection was established. **Table 3.1** summarizes the AM and PM peak hours for each intersection.



paradigm TRANSPORTATION SOLUTIONS LIMITED

Existing Lane Configurations and Traffic Control

TABLE 3.1: INTERSECTION PEAK HOURS

Intersection	Date	AM Peak	PM Peak
Lakeshore Road East and Rosewood Avenue	05 April 2023 (Wednesday)	8:00 – 9:00	4:45 – 5:45
Lakeshore Road East and Woodlawn Avenue		8:00 – 9:00	4:45 – 5:45
Lakeshore Road East and Elmwood Avenue	08 November 2022 (Tuesday)	8:00 – 9:00	4:45 – 5:45

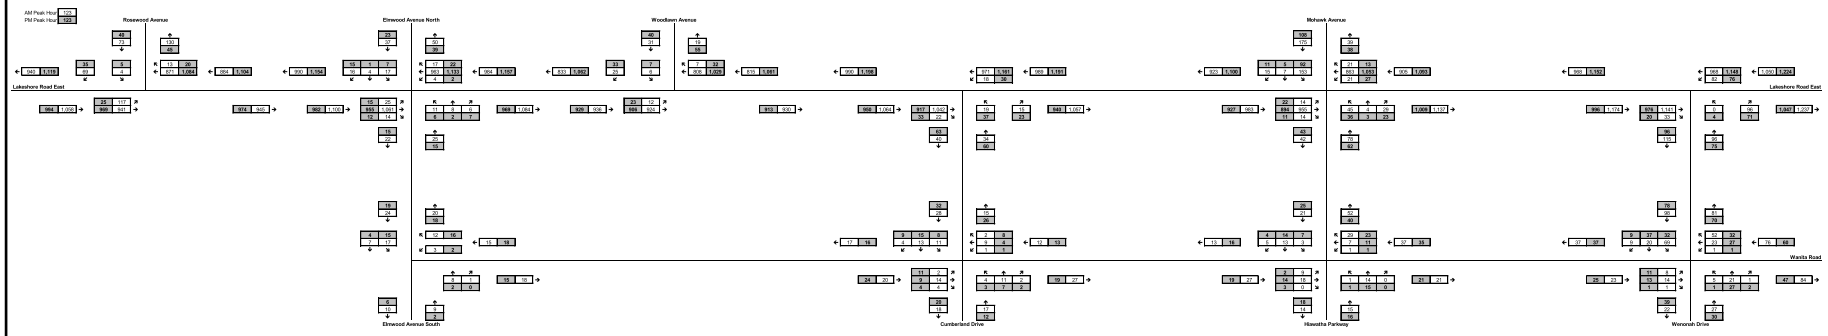
Figure 3.2 illustrates the base year traffic volumes for the weekday AM and PM peak hours.

Appendix A contains the detailed turning movement count data for reference.



NTS

paradigm TRANSPORTATION SOLUTIONS LIMITED

Base Year (2022) Traffic Volumes

3.3 Existing Traffic Operations

Intersection level of service (LOS) is a recognized method of quantifying the average delay experienced by drivers at intersections. It is based on delay experienced by individual vehicles executing various movements. The delay is related to the number of vehicles intending to make a particular movement, compared to the estimated capacity for that movement. The capacity is based on several criteria related to opposing traffic flows, intersection geometry, and at signalized intersections, signal timing.

The highest possible rating is LOS A, under which the average total delay is equal or less than 10 seconds per vehicle. When the average delay exceeds 80 seconds for signalized intersections, 50 seconds for unsignalized intersections or when the volume to capacity ratio is greater than 1.00, the movement is classed as LOS F, and remedial measures are usually implemented if they are feasible. Capacity is evaluated in terms of the ratio of demand flow to capacity with an at-capacity condition represented by a volume-to-capacity (v/c) ratio of 1.00 (i.e., volume demand equals capacity).

The City of Mississauga *Traffic Impact Study Guidelines*[3] identifies critical movements as follows:

- Signalized intersections:
  - v/c ratios for overall intersections operations, through movements or shared through/turning movements increase to 0.85 or above;
  - v/c ratios for exclusive movements increase to 0.90 or above; or
  - Queues for an individual movement are projected to exceed available turning lane storage.
- Unsignalized intersections:
  - LOS, based on average delay per vehicle or on individual movements is LOS E or greater; or
  - The estimated 95th percentile queue length for an individual movement exceeds the available lane storage.

To assess the existing peak hour automobile conditions, an operational analysis was conducted for the weekday AM and PM peak hour traffic volumes at the study area intersections using Synchro software, which

[3] City of Mississauga, *Traffic Impact Study Guidelines*, p12.

implements the methods of the Highway Capacity Manual (HCM). The key parameters used in the analysis include:

- Existing lane configurations;
  - As documented in Section 3.1, no pavement markings delineating lane configurations are provided for the northbound approach at the intersection of Lakeshore Road East/Wenonah Drive. Our assessment examined the lane configuration as both a single shared left/right-turn lane approach, and as a two-lane approach (separate left-turn and right-turn lanes) based upon the available roadway width (approximately nine metres).
- Heavy vehicle percentages derived from existing traffic count data;
- Conflicting pedestrian volumes derived from existing traffic count data;
- Calculated intersection peak hour factors (PHF), which facilitates an assessment of the busiest 15-minute period within the peak hour;
- Existing signal timing plans as obtained from the City, which are included for reference in **Appendix A**; and
- Synchro default values for all other inputs.

Table 3.2 and **Table 3.3** summarize the baseline operational analysis results including the LOS, average delay in seconds, v/c ratios, and 95th percentile queue lengths in metres for the weekday AM and PM peak hours, respectively. Any critical movements are highlighted in orange. **Appendix B** contains the Synchro analysis outputs for reference.

The results of the analysis indicate all study area intersections are operating at acceptable levels of service and well within capacity during the weekday AM and PM peak hours. The intersection of Lakeshore Road East/Wenonah Drive is reported to operate at similar levels of service under the two northbound approach configuration scenarios.

The 95th percentile queue lengths were checked for all turn lanes against provided storage, and queue lengths for through movements were also checked. No queue or spillback issues are identified.

4 Traffic Forecasts

4.1 Horizon Year

The construction duration is anticipated to be between 12 to 18 months for each component, staggered between 2024 and 2028. For assessment purposes both 2024 and 2028 horizons are analyzed.

Future traffic operations for study area intersections were assessed for two scenarios: all construction work to be conducted in 2024; and all construction work to be conducted in 2028. This represents a conservative approach (i.e., errs on the high side) as construction work is anticipated to occur between 2024 and 2028.

4.2 Traffic Growth

Generalized traffic growth was determined by applying a compound growth rate of 2.0% per annum compounded for two years (total growth of 4.0%), and six years (total growth of 13%) to the base year (2022) traffic volumes to derive 2024 and 2028 traffic forecasts, respectively.

Review of historical intersection counts (2006, 2016, 2019 data) along Lakeshore Road in comparison to the 2022 count data indicates negative growth. The lower 2022 traffic volumes are likely the result of the paradigm shift of changes in work environments due to COVID-19. As found across the GTA a majority of employees are now either fully working from home or following a hybrid approach with reduced days in the office.

Regardless, the application of a 2.0% growth rate represents a conservative approach (i.e., errs on the high side) for assessment purposes.

Figure 4.1 and **Figure 4.2** illustrate the 2024 and 2028 traffic forecasts (without construction) for the weekday AM and PM peak hours, respectively.

4.3 Traffic Redistribution

As previously described in **Section 2**, construction activities related to the Elmwood and Hiawatha SPS component requires the partial intersection closure of Lakeshore Road East/Elmwood Avenue (north leg fully closed, while the east, west, and south legs remain open for access), Elmwood Avenue South/Wanita Road (north leg fully closed, while the east and south legs remain open for local access), and the

full intersection closure of Hiawatha Parkway/Wanita Road (all intersection legs fully closed, no traffic permitted through).

The intersection closures result in requiring one or more directions to utilize alternative routes. In order to assess the identified construction plans and the associated impacts on the existing road network, the 2024 and 2028 traffic forecasts have been redistributed to reflect travel pattern changes brought on by the partial and full closure of intersections.

Given the grid layout of the transportation network, there are many different routing options possible; however, for assessment purposes we have assumed the following related to the redistribution of traffic:

- **Partial intersection closure of Lakeshore Road East/Elmwood Avenue. North leg of the intersection will be fully closed only.**
  - Traffic is diverted to the adjacent intersections of Lakeshore Road East/Rosewood Avenue, and Lakeshore Road East/Woodlawn Avenue.
- **Partial intersection closure of Elmwood Avenue South/Wanita Road. North leg of the intersection will be fully closed only.**
  - Traffic is diverted to the adjacent intersections of Cumberland Drive/Lakeshore Road East, and Cumberland Drive/Wanita Road.
- **Full intersection closure of Hiawatha Parkway/Wanita Road. All intersection legs will be closed.**
  - Traffic is diverted to the adjacent study area intersections of Cumberland Drive/Wanita Road, and Wenonah Drive/Wanita Road.

It is noted the traffic redistribution exercise undertaken is conservative (i.e., errs on the high side) recognizing there are multiple alternative travel route opportunities.

Appendix C provides detailed traffic redistribution for each closed/impacted turning movement for reference.

Figure 4.3 and **Figure 4.4** illustrate the 2024 and 2028 traffic forecasts during construction, respectively.

5 Construction Traffic Operations

5.1 2024 and 2028 Horizons Without Construction

To assess the automobile operating conditions for the 2024 and 2028 traffic forecasts during the study peak hours without construction conditions, operational analyses were undertaken using the same methodology, parameters, lane arrangements, and traffic control devices as in the analysis of base year conditions.

Table 5.1 and **Table 5.2** summarize the results of the operational analysis for 2024 horizon without construction during the weekday AM and PM peak hours, respectively.

Table 5.3 and **Table 5.4** summarize the results of the operational analysis for 2028 horizon without construction during the weekday AM and PM peak hours, respectively.

Appendix D contains the Synchro analysis outputs for reference.

The results indicate the study area intersections are forecast to operate at similar levels of service as noted under base year conditions, but slightly exacerbated accounting for the estimated traffic growth.

Under the 2024 and 2028 conditions without construction, the study area intersections are forecast to continue operating at acceptable levels of service and well within capacity.

The exception would be a single critical movement identified. At Lakeshore Road East/Wenonah Drive, the northbound left-turn movement (under the two-lane approach scenario) is forecast to operate at a LOS F during the PM peak hour under both 2024 and 2028 horizons.

However, this is not considered a critical issue as the movement is reported to be operating well within capacity (v/c = 0.08 under 2024 and 0.13 under 2028), and this is not an unusual condition where a minor road (Wenonah Drive) operating under stop control intersects with a major road (Lakeshore Road East). No other critical movements are identified.

5.2 2024 and 2028 Horizons During Construction

To assess the automobile operations for the 2024 and 2028 traffic forecasts during the study peak hours during construction conditions, operational analyses were undertaken using the same methodology, parameters, lane arrangements, and traffic control devices as in the analysis of base year conditions.

Table 5.5 and **Table 5.6** summarize the results of the operational analysis for 2024 horizon during construction conditions during the weekday AM and PM peak hours, respectively.

Table 5.7 and **Table 5.8** summarize the results of the operational analysis for 2028 horizon during construction conditions during the weekday AM and PM peak hours, respectively.

Appendix E contains the Synchro analysis outputs for reference.

The results indicate the study area intersections are forecast to operate at similar levels of service as noted under the conditions without construction. All study area intersections are forecast to operate at acceptable levels of service and well within capacity during the weekday AM and PM peak hours.

Similar to without construction conditions, the exception includes the northbound left-turn movement at Lakeshore Road East/Wenonah Drive.

Under the 2024 conditions during construction, with the shared left/right-turn lane configuration (i.e., representative of the more conservative assessment), the northbound approach is forecast to operate at a LOS F and slightly over-capacity (v/c = 1.08) during the AM peak hour, and at a LOS F and within capacity (v/c = 0.76) during the PM peak hour. Given the sufficient roadway width provisions and based upon field observations, it is more likely that the Wenonah Drive approach will continue to function and operate as a two-lane approach facilitating separate left-turn and right-turn movements.

When analyzed with two lanes, the northbound left-turn movement is reported to operate at a LOS F during both AM and PM peak hours, this is not considered a critical issue as the movement is reported to be operating well within capacity (v/c = 0.86 for AM peak hour and v/c = 0.61 for PM peak hour). Aforementioned, this is not an unusual condition where a minor road (Wenonah Drive) operating under stop control intersects with a major road (Lakeshore Road East).

Under the 2028 conditions during construction, the northbound approach at Lakeshore Road East/Wenonah Drive is forecast to operate exceeding capacity (v/c > 1.00) under both lane approach configurations during the AM peak hour, and for the shared left/right-turn approach during the PM peak hour.

However, this is not considered a critical issue due to the following rationale:

- The 2028 traffic forecasts estimate approximately 30 vehicles turning left onto Lakeshore Road East from Wenonah Drive during both peak hours. This amount of traffic is considered minor and is equivalent to approximately one vehicle every two minutes;
- The estimated 30 left-turning vehicles per peak hour is a result of the conservative redistribution assumed. The forecast over-capacity issue is reflective of the conservative traffic redistribution exercise; and
- Given the grid layout of the adjacent residential neighbourhood, the northbound left-turn volumes at Lakeshore Road East/Wenonah Drive could be diverted to nearby intersections (e.g., Minnewawa Road/Wenonah Drive and Minnewawa Road/Hiawatha Parkway). Residents may choose to pursue other routes to avoid the over-capacity operations, and the noted potential intersection operations may be improved if there is less traffic to be processed through.

The 95th percentile queue lengths were checked for all turn lanes against provided storage, and queue lengths for through movements were also checked. No spillback issues are identified.

Furthermore, given our conservative approach to the anticipated redistribution travel routes, in reality, residents may choose to pursue other routes and the noted potential intersection operations may be improved if there is less traffic to be processed through.

5.3 Assessment of Impacts

Based upon operational analyses conducted in **Section 5.1** and **Section 5.2**, it is concluded the impact of the Elmwood and Hiawatha SPS works is considered minor and no road and/or operational traffic control improvements are anticipated to be required to accommodate the construction impacts.

Given the grid layout of the adjacent residential neighbourhood there are many possibilities for traffic to be rerouted. Our assessment assumed a conservative approach (i.e., errs on the high side) as a worst-case scenario.

Critical movements were identified at the intersection of Lakeshore Road East/Wenonah Drive as a result:

- The northbound shared left/right-turn movement (under a single lane approach); and
- The northbound left-turn movement (under a two-lane approach).

As previously discussed these critical movements are not considered to be critical issues and the anticipated vehicular delay (LOS F) is a common occurrence at minor road approaches operating under stop-control with a major road.

It is also noted the traffic redistribution exercise was conservative and potentially traffic volumes may be lower than forecast due to drivers selecting other alternative travel routes.

Table 5.9 provides a summary of how traffic volumes are anticipated to change due of the adjacent construction. Overall, the construction impact on the adjacent transportation network is considered minor from an operational perspective. Majority of the redistributed traffic would be less than daily traffic variations typically experienced (10%).

Even though the intersections of Wanita Road with Cumberland Drive and Wenonah Drive suggest a relatively high increase (over 100% and around 20%, respectively) in traffic during the AM and PM peak hours, this only translates to a small increase in traffic volumes. The actual magnitude of additional traffic is approximately 95 and 50 vehicles, respectively. In reality, the additional traffic can be summarized as an additional 1-2 vehicles per minute within the peak hours.

This amount of traffic variation is imperceptible and anticipated not to result in any adverse impact to the adjacent transportation network.

Therefore, no road and/or operational traffic control improvements are anticipated to be required to accommodate the construction stage.

TABLE 5.9: TRAFFIC VOLUME VARIATION

Intersection	2028 Forecast Without and With Construction % Volume Variation (Total Volume Entering Intersection)	
	AM Peak Hour	PM Peak Hour
Lakeshore Road East & Rosewood Avenue	0.3%	0.1%
Lakeshore Road East & Woodlawn Avenue	2%	1%
Lakeshore Road East & Cumberland Drive	3%	2%
Lakeshore Road East & Mohawk Avenue/Hiawatha Parkway	-0.7%	-0.9%
Lakeshore Road East & Wenonah Drive	2%	1%
Wanita Road & Cumberland Drive	110%	103%
Wanita Road & Wenonah Drive	19%	20%

6 Impact Assessment Summary

6.1 Rosemere SPS

6.1.1 Transportation Impacts

The Rosemere Sewage Pumping Station (SPS) is located approximately 80 metres east of the Stavebank Road/Rosemere Road intersection. Access to the SPS is provided via Rosemere Road, which also provides access to three residential homes.

As we understand, to accommodate the planned works Rosemere Road will be reduced to a single lane. That is, the southern most lane on Rosemere Road will be closed while the northern most lane will be maintained and open for both directions of travel. No closure or lane reductions on Stavebank Road is anticipated. Additionally, Sandham Road between Mona Road and Vesta Drive will be closed to vehicular traffic.

It is anticipated the works related to the Rosemere SPS component will result in minor impacts on the surrounding residential neighbourhoods. A total of three residential homes accessed via Rosemere Road will be impacted from the lane reduction; however, access to and from these properties will continue to be maintained. Traffic generated to and from the three residential homes is anticipated to be low and be able to operate within one travel lane without issues. Furthermore, given Rosemere Road is a discontinuous roadway, the lane reductions will not result in any impacts to the larger external network.

The full closure of Sandham Road will not affect access to residential homes along Mona Road nor Vesta Drive. Access to homes on both Mona Road and Vesta Drive will not be impacted.

It is noted at the east end of Sandham Road a pedestrian access connection is provided with the Port Credit GO Station parking lot, as we understand this pedestrian connection will be maintained during construction. It is also noted that the driveway connection with Sandham Road on the west end will not be impacted.

6.1.2 Mitigation Measures

While the associated construction with this component will not result in any major traffic impacts (i.e., closures of intersections, etc.). It is anticipated the typical associated occurrences due to construction can be expected.

That is, there will likely be a minor increase in trucks and service vehicles. It is anticipated there will be approximately eight to ten trucks per day at each shaft compound location. It is further noted that the construction activities at each shaft compound would not be occurring simultaneously.

Overall, the traffic impact is considered minor and can be managed via signage and traffic control persons when active work is occurring.

As a result of the planned works, appropriate Construction and Traffic Management Plans will be developed. This could include temporary diversions of pedestrian walkways, traffic control persons, temporary signage, etc.

6.2 Lakeshore Road Sub-Transmission Watermain and Trunk Sewer

6.2.1 Transportation Impacts

Two shaft compound locations are identified as related to the Front Street Sewage Pumping Station. They are located in the northeast quadrant of the Front Street/Lakeshore Road West intersection within Marina Park and adjacent municipal parking lot (Lot #2), and in the northeast quadrant of the Elmwood Avenue North/Lakeshore Road East intersection within the municipal parking lot (Lot #4).

The anticipated work will consist of two components, Trunk Sewer and a new Sub-Transmission Watermain tunneled along Lakeshore Road.

For both pieces of infrastructure, all associated tunnelling work will not result in any surface disturbance along Lakeshore Road.

No major traffic impacts are anticipated with the proposed construction activities, that is, intersection operations and roadway capacity along Lakeshore Road. The exception would be the adjacent works related to the Elmwood and Hiawatha SPSs which requires the closure of the north leg of the Elmwood Avenue North/Lakeshore Road East intersection.

It is anticipated the two municipal parking lots will be impacted due to the shaft compound areas (i.e., loss of parking).

It is assumed the parking provisions will be displaced and temporarily lost. Additionally, the Port Credit's Farmers Market located in the municipal parking lot (Lot #4) will be temporarily closed and would be relocated or remain closed during construction.

6.2.2 Mitigation Measures

Aforementioned, municipal parking provisions will be impacted. For the parking displaced at Marina Park, it is anticipated that parking demands can be accommodated by the nearby adjacent municipal parking lots (Municipal Lot #1 at 33 Front Street North and Municipal Lot #3 at 8 Stavebank Road), and in the adjacent Marina Park public parking lot on the southside of Lakeshore Road West. For reference, Figure 2.4 illustrated the locations of available municipal parking lots.

With construction work to occupy the northeast quadrant of the Elmwood Avenue North/Lakeshore Road East intersection within the Municipal Lot (Lot #4), parking will be lost. To mitigate the loss of parking, an alternative temporary parking lot will be provided at the Harold E. Kennedy Park while construction occurs at Municipal Lot #4. Following the completion of construction, Harold E. Kennedy Park would be restored as full public park space.

While the associated construction with this component will not result in any major traffic impacts (i.e., closures of intersections, etc). It is anticipated the typical associated occurrences due to construction can be expected. That is, there will likely be a minor increase in trucks and service vehicles. It is anticipated there will be approximately eight to ten trucks per day at each shaft compound location. It is further noted that the construction activities at each shaft compound would not be occurring simultaneously.

Overall, the traffic impact is considered minor and can be managed via signage and traffic control persons when active work is occurring.

As a result of the planned works, appropriate Construction and Traffic Management Plans will be developed. This could include temporary diversions of pedestrian walkways, traffic control persons, temporary signage, etc.

6.3 Elmwood and Hiawatha SPSs

6.3.1 Transportation Impacts

The Elmwood SPS is located approximately 50 metres west of the Elmwood Avenue South/Carlis Place intersection. The Hiawatha SPS is located at the south limits of Hiawatha Parkway, in vicinity of the Hiawatha Parkway/Cumberland Drive intersection.

The construction plans and their anticipated impacts include the following:

- An area situated south of St. Lawrence Drive, just west of the Elmwood SPS will be occupied. No impacts to St. Lawrence Drive are anticipated as the roadway will not be impacted; however, the adjacent Waterfront Trail may potentially be impacted.

  Potential closure of the access to the Waterfront Trail from Elmwood Avenue South. This will have a direct impact on active transportation users (walking and cycling) accessing Waterfront Trail from Elmwood Avenue South.

  As we understand, the intent is to maintain or provide the existing active transportation facility while construction is occurring.

- An area at the south end of Elmwood Avenue South, just south of Carlis Place. This construction zone is not anticipated to result in any direct traffic impacts to adjacent residents; however, the adjacent construction area of Elmwood Avenue South/Wanita Road will impact access for the residents south of Wanita Road.

- The intersection of Elmwood Avenue South/Wanita Road is planned to be partially closed.

  The north leg of the intersection will be fully closed (i.e., no local traffic permitted). Aforementioned, the full closure of the north leg of the intersection will impact access for the residents south of Wanita Road (i.e., minor detouring will be required).

  The east and south legs of the intersection will be reduced to a single lane to serve each travel direction for local traffic access.

- The intersection of Hiawatha Parkway/Wanita Road is planned to be fully closed. No local traffic will be permitted through this location requiring residents to utilize alternative travel routes within the neighbourhood.

- The intersection of Lakeshore Road East/Elmwood Avenue is planned to be partially closed.

  The north leg of the intersection will be fully closed (i.e., no local traffic permitted) to facilitate connection to existing maintenance holes. Traffic to and from the north leg will require minor detouring.

  - As documented in Section 5, the partial closure of Elmwood Avenue South/Wanita Road and Lakeshore Road East/Elmwood Avenue, and the full closure of Hiawatha Parkway/Wanita Road will result in traffic redistributions.

    Analyses of the additional traffic forecasts at adjacent intersections has determined there is sufficient capacity to

accommodate and no temporary mitigation measures are required. That is, the existing lane configurations and traffic control at the assessed study area intersections are determined to be sufficient.

- The area in immediate proximity surrounding the Hiawatha SPS situated at the south end of Hiawatha Parkway. The intersection of Hiawatha Parkway/Cumberland Drive is anticipated to remain open for all traffic.

  It is noted there is the Hiawatha Park located south of the Hiawatha SPS. It is anticipated that local access to the park will be maintained and provided.

6.3.2 Mitigation Measures

The assessment of detoured/redistributed traffic at adjacent intersections has determined there is sufficient capacity to accommodate diverted traffic and no temporary mitigation measures are required. That is, the existing lane configurations and traffic control at the assessed study area intersections are determined to be sufficient.

It is anticipated the typical associated occurrences due to construction can be expected. That is, there will likely be a minor increase in trucks and service vehicles. It is anticipated there will be approximately eight to ten trucks per day at each shaft compound location. It is further noted that the construction activities at each shaft compound would not be occurring simultaneously.

Overall, the traffic impact is considered minor and can be managed via signage and traffic control persons when active work is occurring.

As a result of the planned works, appropriate Construction and Traffic Management Plans will be developed. This could include temporary diversions of pedestrian walkways, traffic control persons, temporary signage, etc.

As we understand the City of Mississauga is undertaking an investigation of travel lane reduction on Lakeshore Road through a pilot study. It is recommended the lane reduction pilot study be implemented following completion of the construction works related to the Port Credit East Water and Wastewater Servicing Optimization Strategy.

6.4 Summary

The preferred construction plans for the components related to the Rosemere SPS and Lakeshore Road Sub-Transmission Watermain and Trunk Sewer indicate no intersection closures will be involved, and the required minor road section closures/lane reductions are anticipated to have minor impacts. These minor works can be accommodated without road and/or operational traffic control improvements.

The preferred construction plan related to the Elmwood and Hiawatha SPS component requires partial intersection closure of Lakeshore Road East/Elmwood Avenue, Elmwood Avenue South/Wanita Road, and a full intersection closure of Hiawatha Parkway/Wanita Road. The intersection closures require motorists to reroute and seek alternative travel routes. **Section 4.3** details the traffic redistribution due to construction and **Section 5** discusses the impacts of the intersection closures on the existing road network during the construction stage.

In summary, the anticipated construction works related to all components is considered minor and can be managed via signage and traffic control persons when active work is occurring. No intersection geometric improvements or changes to intersection traffic control have been determined to be required.

7 Conclusions and Recommendations

7.1 Conclusions

Based on the investigations carried out, it is concluded that:

- For the Port Credit East Water and Wastewater Servicing Optimization Strategy, the components include works related to the Rosemere Sewage Pumping Station (SPS), the Lakeshore Road Sub-Transmission Watermain and Trunk Sewer, and both the Elmwood and Hiawatha Sewage Pumping Stations (SPSs) as part of a Schedule C Municipal Class Environmental Assessment (EA).
- Works related to the **Rosemere SPS** component will result in minor impacts on the nearby residential homes. A total of three residential homes on Rosemere Road will be impacted by the proposed lane reduction on Rosemere Road.

  As the roadway is discontinuous, and access to the residential homes will be maintained, the overall transportation impact is considered minor, and no roadway or intersection geometric improvements are determined to be required during construction.
- Works related to the **Lakeshore Road Sub-Transmission Watermain and Trunk Sewer** component will occupy and displace parking. That is, Municipal Lot #2 and #4 will be occupied for construction activities. While parking is anticipated to be displaced, the associated tunnelling activities will not result in any surface disturbance along Lakeshore Road.

  No major traffic impacts are anticipated with the proposed construction activities, that is, intersection operations and roadway capacity along Lakeshore Road will not be impacted.

  Regarding the displaced parking spaces at Municipal Lot #2, parking demands will be accommodated by adjacent Municipal Lots #1 and #3, as well can be accommodated by the public parking lot on the south side of Lakeshore Road. Displaced parking at Municipal Lot #4, will be replaced with a temporary parking lot proposed at the Harold E. Kennedy Park site.
- Works related to the **Elmwood and Hiawatha SPSs** component will result in traffic redistribution to adjacent intersections due to the planned partial intersections closures of Lakeshore Road East/Elmwood Avenue North and Elmwood Avenue South/Wanita Road, and the full intersection closure of Hiawatha Parkway/Wanita Road.

It is noted the road closure of Elmwood Avenue North, north of Lakeshore Road, the related construction works will occur following the Lakeshore Road Sub-Transmission Watermain and Trunk Sewer construction.

- Under the assessed **2024 and 2028 horizons without SPS construction**, the study area intersections are forecast to operate at acceptable levels of service and well within capacity; and
- Under the assessed **2024 and 2028 horizons during SPS construction**, operations at the study area intersections are reported to be similar to 2024 and 2028 conditions without construction.

  The traffic variation due to traffic redistribution is found to be minor. All intersections and traffic movements are forecast to continue operating at acceptable levels of service and within capacity during all peak periods.
- No road and/or operational traffic control improvements are anticipated to be required to accommodate the construction stage.

- Overall, the construction works related to all components is considered minor and is anticipated to generate minimal disruption. As a result of the planned works, appropriate Construction and Traffic Management Plans (temporary diversions of pedestrian walkways, traffic control persons, temporary signage, etc.) will be developed.

7.2 Recommendations

Based on the findings of this study, it is recommended the City of Mississauga and Region of Peel recognize the conclusions drawn above.

Appropriate Construction Management Plans be developed for each component and implemented to ensure any potential conflicts are minimized.

Intersection Summary

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

ODOUR AND NOISE MITIGATION REVIEW TECHNICAL MEMO

Date:	3/3/2023	File:	719033
From:	Laura Verhaeghe, P.Eng.		
Project:	Port Credit East Water and Wastewater Servicing Optimization Strategy, Sch. 'C' Class EA		
Subject:	Odour and Noise Mitigation Review for Rosemere SPS		

TECHNICAL MEMO

1. Introduction

As part of the Class EA for the Port Credit East Water and Wastewater Servicing Optimization Strategy, GM BluePlan has prepared this Technical Memorandum (TM) to review potential odour and noise impacts and the associated mitigation measures related to the recommended infrastructure projects. This memo will be included in the Project File and should be read in conjunction with the findings and recommendations of the Class EA Study.

Specifically, this TM evaluates potential for odour and noise impacts associated with the construction and operation of a new Rosemere Sewage Pumping Station (SPS) and to recommend potential mitigative actions, define next steps and outline further commitments to be incorporated during detailed design. The other proposed projects under this Class EA, the Lakeshore Watermain and new sewers associated with Elmwood and Hiawatha have no or negligible potential for odour generation and are excluded from this analysis. Noise impacts for Lakeshore Watermain and Elmwood/Hiawatha sewers are limited to construction noise, and comparable abatement strategies should be used for construction noise as discussed in Section 4 of this TM.

2. Background

The existing Rosemere SPS is located at 182 Rosemere Road in Mississauga and services a residential catchment. The station is rated for 25 L/s with two pumps in a duty/stand-by configuration, and is classified as a Type II station based on flow. Rosemere SPS is aging and does not meet current design standards; as such, the SPS requires replacement. Twin 200mm diameter forcemains along a new alignment discharging on Vesta Drive are also proposed.

The pumping station is located adjacent to a residential neighborhood, with sensitive receptors for odour and noise. Although there is no odour control system currently in the place, the Region of Peel is unaware of any odour complaints connected to the pumping station. Regardless, there exists the potential for odour generation at the site and at the new gravity outfall maintenance hole for the proposed forcemains, also considering the new station will be designed for a larger rated capacity of 34 L/s. Noise during current operation is not a known concern; however, noise during construction needs to be considered, and the new station should be designed to mitigate any new sources of noise.

3. Odour Assessment

Odour Sources

The primary odorant present in wastewater collection systems is hydrogen sulfide (H_2S), generated in the liquid phase under anaerobic conditions and subsequently released to the sewer or wetwell headspace as an odourous gas. There is the potential for odour generation in the proposed wastewater pumping station and forcemain discharge.

Table 1 summarizes the anticipated sources of odour generation for this project.

Table 1: Potential Odour Sources Associated with Proposed Rosemere SPS and Forcemain

Location	Method of Odour Release	Estimated Gaseous H_2S Concentration	Potential Sensitive Receptors	Estimated Distance to Closest Sensitive Receptor
1. Rosemere SPS	Odorous gas can be released from the wet well headspace, particularly when wet well is filling, as air becomes pressurized.	5-15 ppm in wet well headspace	Residential properties on Rosemere Road across from SPS	25m
2. Gravity outfall of proposed twin forcemains on Vesta Dr at Proposed 2400mm dia. Sanitary MH4A	Turbulence is created by sudden change in velocity and/or elevation change (ex. Drop structure), releasing odourous gas into the sewer headspace that may escape into the environment as fugitive emissions.	<5ppm in gravity sewer headspace	Residential properties on Vesta Dr. and GO Transit parking lot	10m

The hydrogen sulfide concentrations listed in the table above are based on typical values for similar applications and should be verified via field testing of existing station hydrogen sulfide concentrations in the wet well headspace during the early stages of detailed design. This will allow for more accurate sizing of abatement equipment at the pump station site, if required.

The conceptual forcemain design has a profile that is continuously rising in elevation from the SPS to the gravity discharge on Vespa Road. As such, this profile does not contain any high points in the middle of the forcemain where air could accumulate, and removes the needs for air valves along the forcemain. As result, the only two discharge points for odour that will be considered in this assessment are the wet well and the forcemain gravity discharges. Although odour may possibly be generated in the downstream sewer, the scope of this review is limited to the proposed works. It should be noted that due to higher projected flows through the forcemain, the residence time in the downstream sewer will be reduced during peak flows, which may reduce odours generated downstream, as anaerobic conditions are less likely to form.

Odour Mitigation

The general odour mitigation strategy should include the following:

- Target odours at their source;
- Keep H_2S in the liquid phase (reduce the amount of odorous gas that enters the sewer headspace);
- Keep odorous gas in the pipe (prevent odorous gas that enters the headspace of the pipe from exiting the sewer system); and
- Provide a controlled odourous gas release point complete with adequate ventilation and treatment.

The Region of Peel has provisions for odour mitigation and control in their Sewer Pumping Station Design Standards, which was updated in 2021. The proposed Rosemere SPS design shall incorporate the new SPS Design standards as well as the Region's linear standards where applicable. Specifically, the following elements related to odour control should be incorporated to meet current standards:

1. The design should always endeavour to reduce the potential for odour generation. This can include preventing anaerobic conditions from developing, and sizing pumps to ensure enough cycling frequency to prevent stagnant conditions. Standard drawing SPS-110 incorporates forced air ventilation of wet wells for Type III and IV stations. Although the station is a Type II, forced air ventilation should still be considered to prevent build-up of H_2S in the wet well headspace, and increase aerobic conditions, pending the results of the odour study, described below.

2. An odour study shall be conducted for any new station being constructed within 50 m of a sensitive receptor, which is the case for the proposed Rosemere SPS. The odour study shall be based on empirical data collected from the wet well where possible and include dispersion modelling to determine impacts, at a minimum. Empiral data can be collected from the existing Rosemere SPS to get representative data to be used for design of the new SPS. As part of the odour study, an Odour Screening Report shall be completed in accordance with O.Reg 1/17 to determine the need for further odour assessment that could potentially include a Best Management Practices Plan (BMPP) for Odour and an Odour Control Report.

3. The station should be designed to accommodate future odour control equipment, pending the results of the odour study. Odour control equipment may include a biofilter, biotrickling filter, activated carbon or a combination of these technologies, depending on the odorant concentrations determined during the odour study. Based on the limited space available at Rosemere SPS, activated carbon or a biotrickling filter are likely more practical due to their smaller footprint. Biotrickling filter technology is a permanent technology using microorganisms to biochemically oxidize the H_2S and can effectively treat elevated levels of hydrogen sulfide from 5 to >200ppm. The primary operational cost is the supply of make-up water to control the pH. Activated carbon uses adsorption to physically remove the H_2S from the airstream and requires regular replacement of the carbon media. This technology does not require a water supply and is generally most cost effective when H_2S concentrations are low, reducing carbon change-out frequency. Both biotrickling filtration and activated carbon technology can easily achieve >99% removal of hydrogen sulfide, which is the primarily odorant present in most collection systems. It is also possible to combine the technologies in series using the biotrickling filter as a treatment stage, followed by a polishing activated carbon stage to achieve even greater performance, as determined necessary by proposed dispersion modeling during detailed design.

4. The gravity outfall maintenance hole (MH) should be designed per Region Standard Drawing SPS-118 with a transition flow chamber to minimize turbulence at this point. A corrosion resistant coating shall be used on all concrete surfaces to reduce corrosion impacts of hydrogen sulfide. Per Region Standard Drawing 2-5-22, a vent pipe with inline odour control is proposed coming off the gravity outfall MH. A passive, inline carbon would likely be suitable.

Potential odour mitigation actions described above are summarized in **Figure 1**. The final odour mitigation strategy may include some or all of the actions shown in the figure, as determined necessary based on future field studies and dispersion modeling.

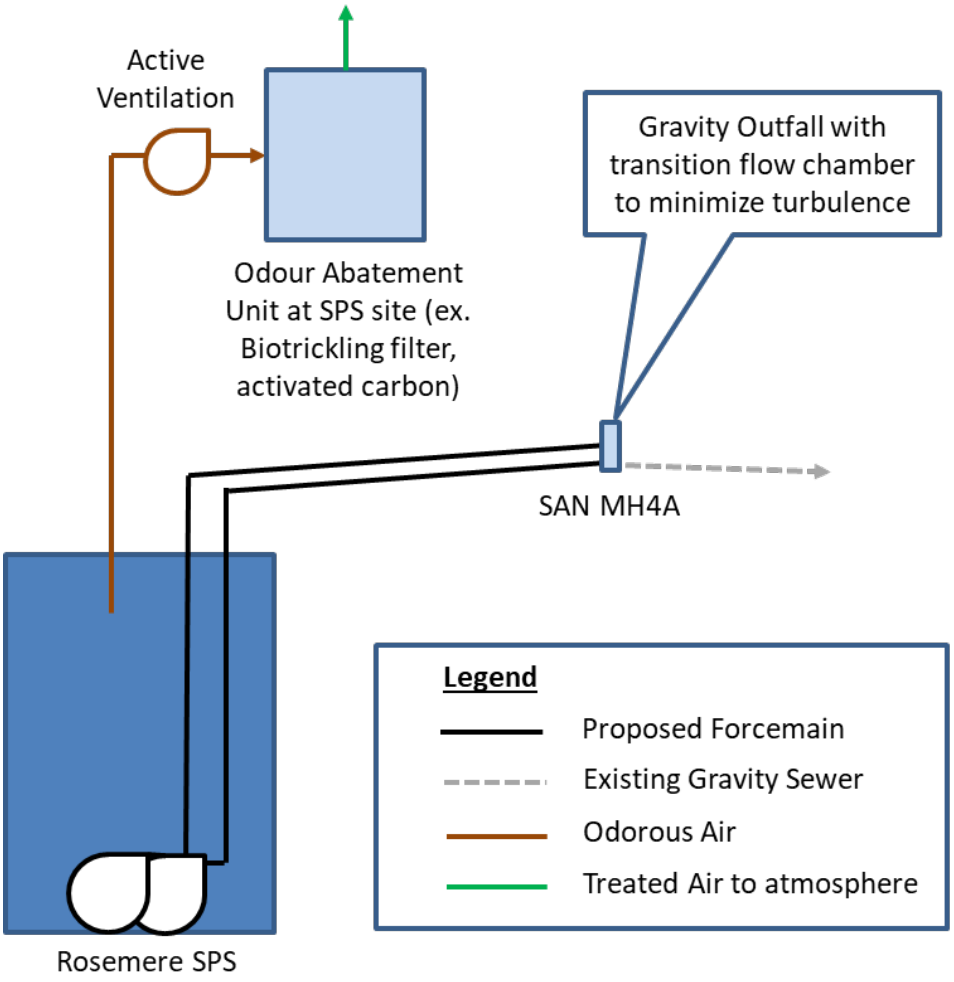

Figure 1: Potential Odour Mitigation Strategy

4. Noise Assessment and Mitigation

Noise impacts during both construction of the SPS and forcemains, as well as during SPS operation should be considered. Environment Noise Guideline (NPC-300) applies to stationary sources of noise and provides a guideline for sound limits during operation of the station, excluding noise generated during construction. Sounds limits in NPC-300 should be considered based on the noise sensitivity of the site. The City of Mississauga Noise By-Law would also apply, and will need to be considered for both construction and long-term operation unless an exemption is granted. Expected sources of noise and potential mitigation measures are summarized in the table below:

Table 2: Potential Sources of Noise During Construction and Operation of Rosemere SPS

Noise Source	Duration	Impact Level (without mitigation)	Potential Mitigation Measures
1. Construction Noise Sources (ie. excavation, tunnelling, temporary generators)	Short-term	Moderate – High	Stipulate stricter working hours in construction contract to minimize disruptions to residents (ie. 8am – 6pm only); notify residents during times of higher noise level (ie. compaction, shoring installation etc.)
2. Permanent Stand-by Generator (testing and under power failure/emergency condition)	On-going	Moderate	Specify generator with lower decibel rating. Locate generator indoors. Install combustion air dampers facing away from residents to reduce impacts while generator is running.
3. Pump operation	On-going	Low	Minimal to no impacts expected. Pumps will be below grade, enclosed in wet well.

If an ECA amendment is required for station upgrades based on the outcome of the odour study described above, a noise screening shall be completed to fulfill the requirements of the Air and Noise ECA approval submission. Based on the limited sources of noise that will be permanently in place at the proposed Rosemere SPS, an acoustic assessment is not anticipated to be required.

5. Summary

Overall, by incorporating odour reduction, containment and treatment strategies, the proposed Rosemere SPS and forcemains will be designed to meet Region Standards and provincial regulatory requirements. The need for odour abatement will be determined based on the outcome of the odour study in conjunction with modeling to achieve the required odour mitigation.

Similarly, the new station will be designed to reduce noise impacts to sensitive receptors by locating the proposed standby generator indoors and specifying a lower decibel unit as required to adhere to NPC-300 Guidelines and the local noise by-law. Construction hours may be limited to adhere to the noise by-law.

1.0 Introduction

GM BluePlan Engineering Limited (GM BluePlan) was retained by the Region of Peel (Region) to conduct a Schedule 'C' Municipal Class Environmental Assessment for the Port Credit East Water and Wastewater Servicing Optimization Strategy to meet existing and future growth within the Port Credit East study area. There are four components identified for this project:

1. New Deep Trunk Sewer on Lakeshore Road,
2. New Sub-Transmission Watermain on Lakeshore Road,
3. New Rosemere Sewage Pumping Station (SPS) and associated Twinned Forcemains, and
4. Decommissioning of Elmwood and Hiawatha SPS and associated Gravity Sewers.

As part of this study, a Tree Screening Report were completed for the Rosemere SPS component. The purpose of this report is to document trees at the existing Rosemere SPS location, verify its location, condition, and other relevant data necessary in order to develop appropriate mitigation measures.

The inventoried trees within the site were assessed based on their health and condition at the time of survey. The extent of the inventory was based on the site plans at the time of the assessment. Tree management recommendations are provided based on municipal standards outlined within the *City of Mississauga's Tree Preservation & Protection Standards*[1].

Rosemere SPS is located at 182 Rosemere Road in Mississauga. Rosemere SPS is owned and operated by the Region of Peel. There are three private residential houses to the northwest of the SPS, and one private residential home on Stavebank Road situated on a L-shaped property, where the back of property is adjacent to Rosemere SPS. **Figure 1** shows a schematic depicting the location of the existing SPS and general layout.

[1] City of Mississauga. 2017. Tree Preservation & Protection Standards. https://www.mississauga.ca/publication/tree-preservation-and-protection-standards/

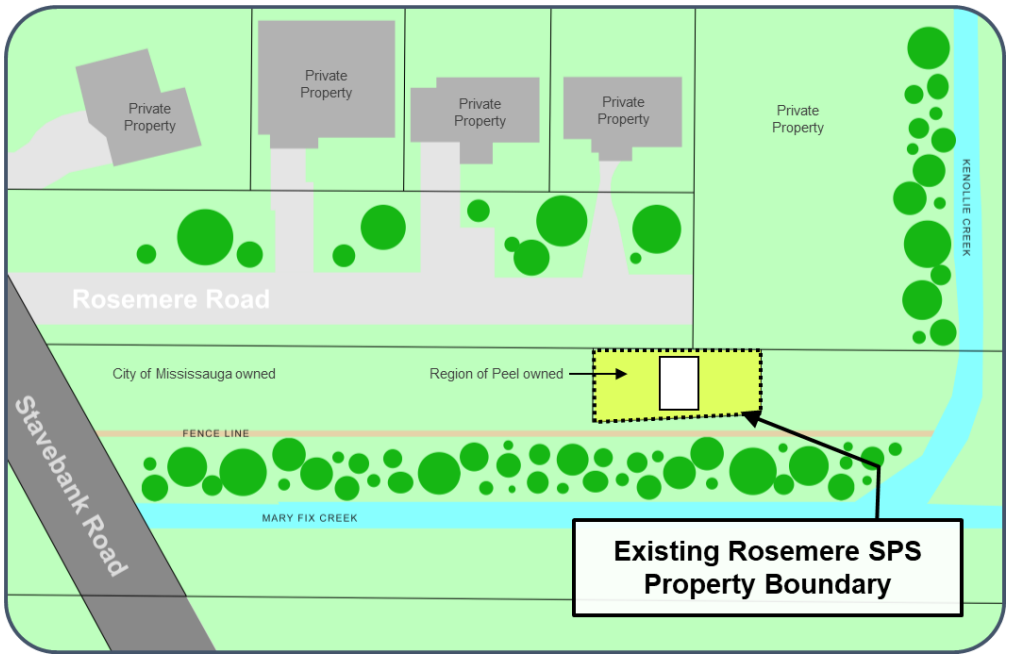

Figure 1: Existing Rosemere SPS Schematic

The work plan for this report includes the following:

- Preparation of an inventory of tree resources, including diameter at breast height (DBH) within the accessible space along Rosemere Road, from Stavebank Road to the end of the road, where the existing SPS is located,
- Evaluation of the potential for preserving trees based on the proposed project works, and,
- Documentation of the findings within this report.

1.1 Proposed Project Works

The proposed works at Rosemere SPS include the decommissioning of the existing SPS in preparation for the construction of a new SPS and twinned forcemains. The new SPS will be located slightly west of the existing station, on the south side of Rosemere Road. Above and below ground works are noted in **Figure 2.** The proposed staging area noted in the figure will be required for laydown and equipment storage during the duration of the construction which will require tree removal and/or tree protection.

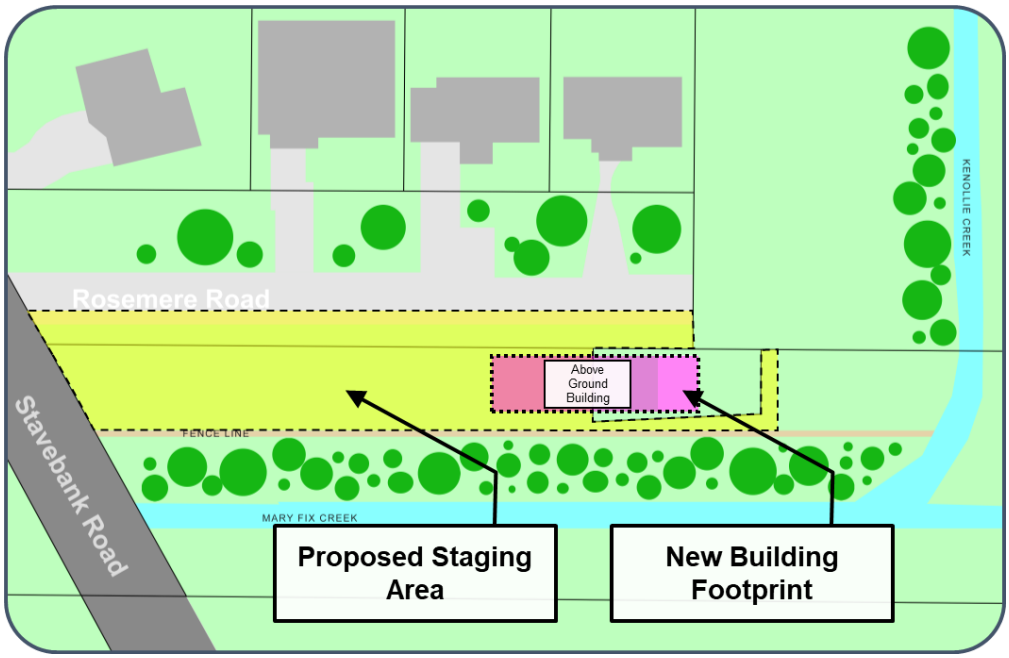

Figure 2: Proposed Rosemere SPS Schematic

1.2 Methodology

An ISA Certified Arborist conducted surveys on December 2, 2022 and January 18, 2023. The inventoried area took place along Rosemere Road from Stavebank Road within the proposed staging area as depicted in **Figure 2**. Data was collected using ArcGIS Survey123 on a handheld device, allowing for infield data collection while minimizing data transference risk and allowing for location data to be captured. Tree locations are shown in **Figure 3**. Trees were tagged and characteristics were logged following the parameters listed in **Table 1** below.

Table 1: Tree Survey Characteristics and Parameters

Parameter	Description
Tree Tag ID	Unique identifier assigned to the tree.
Location	Collected as coordinates in UTM, using the Trimble Geo7x, as captured in field.
Species ID	Common and scientific notation provided.
Diameter at Breast Height (DBH)	Measurement taken in centimeters at 1.4m from the ground.
Estimated Crown Size (Drip Line)	Field measurement of the drip line.
Tree Health	Relating to vigour, and visible presence of pests or disease, condition ratings include Good, Fair, Poor, and Dead.
Tree Structure	Relating to trunk integrity and crown structure, condition ratings include Good, Fair, Poor, and Dead.
Overall Condition	Estimation of the whole tree's condition using information from tree health, and tree structure, condition ratings include Good, Fair, Poor, and Dead.
Comments	Additional relevant detail, including loss or breakage of limbs, habitat information, invasive species presence, etc.
Preservation Comments	As it relates to the care for the specific tree prior to consideration of construction.

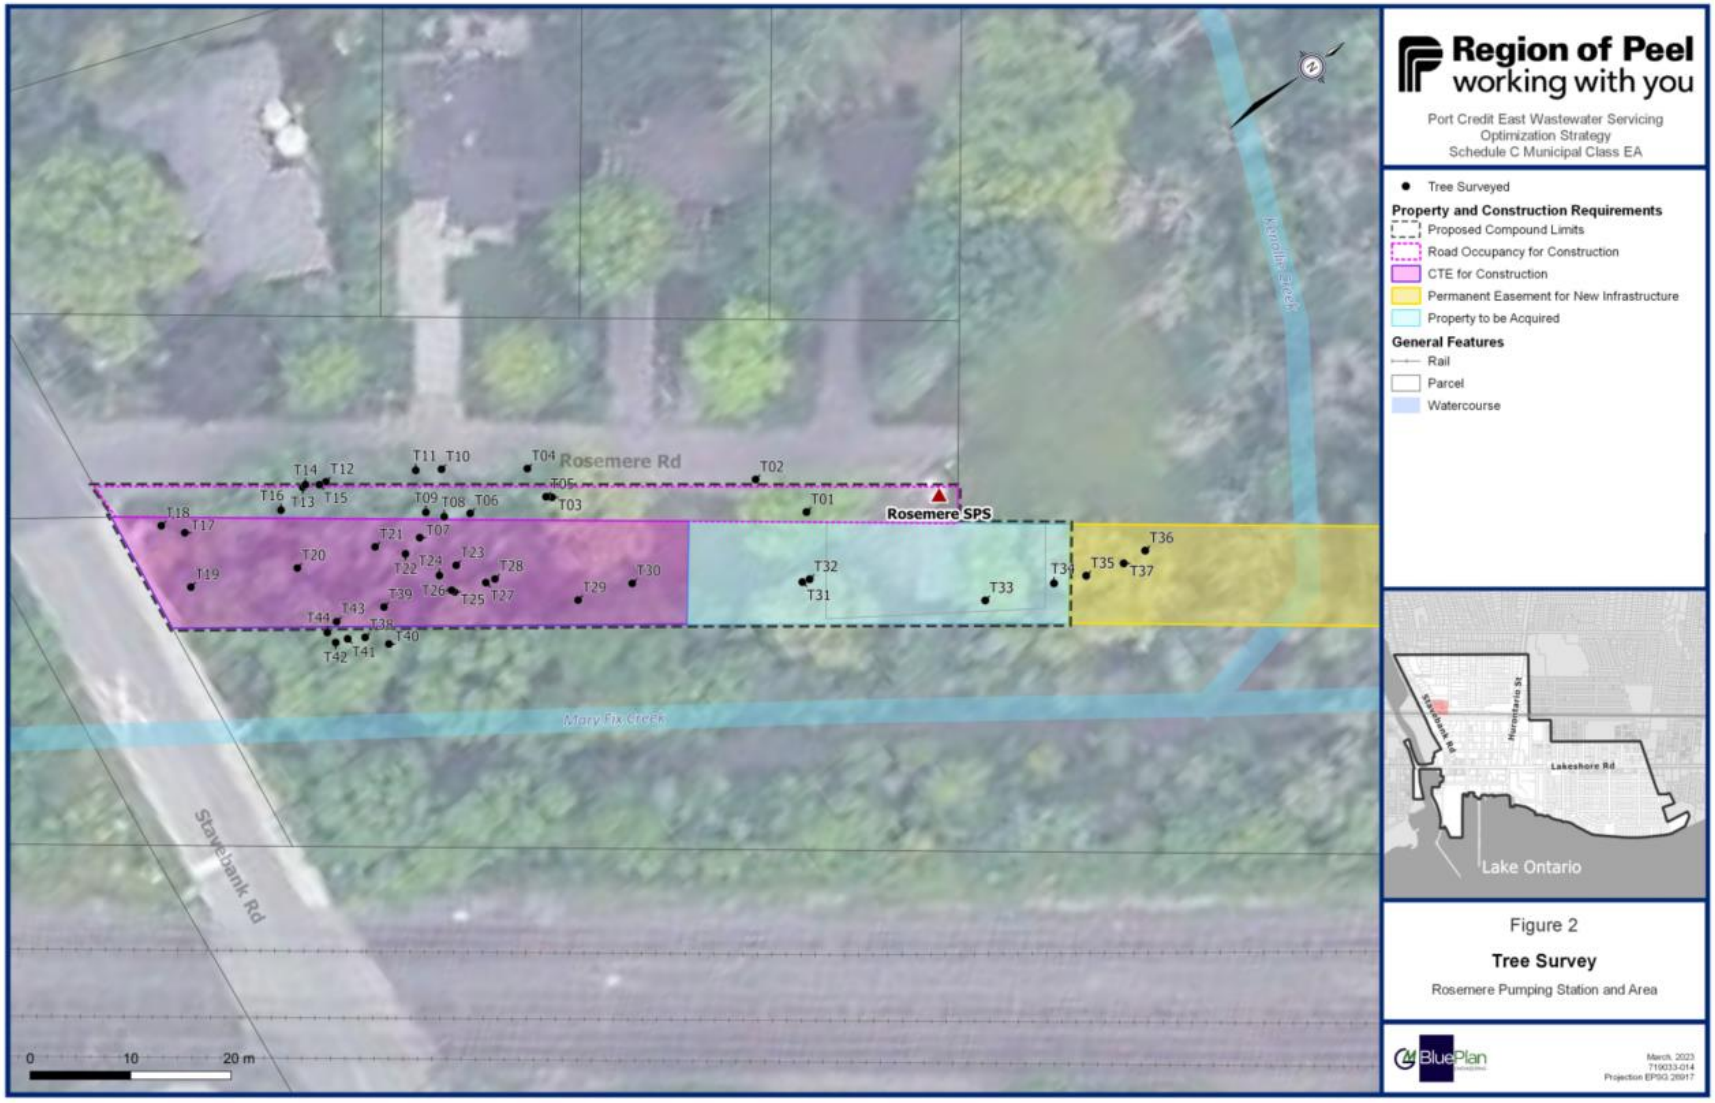

Figure 3: Tree Survey

2.0 Assessment Results

2.1 Existing Site Description

Rosemere SPS is located at 182 Rosemere Road in Mississauga and is owned and operated by the Region of Peel. There are three private residential houses to the northwest of the SPS, and one private residential home on Stavebank Road situated on a L-shaped property, where the back of the lot is adjacent to Rosemere SPS (**Figure 1**).

As noted in the project's Natural Environment Report (WSP, 2023), this site is characterized by Kennollie Creek to the east, and Mary Fix Creek to the south. Both creeks are straightened concrete channels with a steep, riparian area. Additionally, a *Site Preparation and Demolition Plan* for the proposed update to the Rosemere SPS (previously conducted by Cole Engineering Group in 2020), noted that this is a managed greenspace with maintained trees.

Canopy trees present are predominantly non-native species, such as Norway Maple (*Acer platanoides*), Black Locust (*Robinia pseudoacacia*), Weeping Willow (*Salix babylonica*) and Manitoba Maple (*Acer negundo*), as well as native species such as Green Ash (*Fraxinus pennsylvanica*), Black Walnut (*Juglans nigra*), Sugar Maple (*Acer saccharum*), Sassafras (*Sassafras albidum*) and Basswood (*Tilia americana*). There is a deciduous forest in the northern portion of the study area that appears to have an abundance of dead Ash (*Fraxinus sp.*) trees.

2.2 Impacts of the Proposed Project Works

A total of 44 trees that were accessible to the Arborist within the proposed construction staging area were logged. **Figure 3** depicts the location of trees. The full tree inventory detail can be found in **Appendix A**. Site photos can be found in **Appendix B**.

Tree resources breakdown at this location include:

- 47.7% Black Locust (*Robinia pseudoarcacia*),
- 11.4% Basswood (*Tilia americana*),
- 6.8% Willow species (*Salix sp.),*
- 6.8% White Pine (*Pinus strobus*),
- 4.5% Catalpa (*Catalpa speciosa*),
- 4.5% Red Maple (*Acer rubrum*),
- 4.5% Black Cherry (*Prunus serotina*), and
- 4.5% Buckthorn (*Rhamnus cathartica*).

It is assumed that the trees surveyed are City-owned, since they are located within the City of Mississauga owned property and not located immediately in the front of private residential properties. Where there is proposed development or construction that impact trees, the City of Mississauga's *Tree Preservation & Protection Standards (latest revision)* has been used in this report to provide guidance on determining preservation, protection, and compensation of the impact.

2.3 Protection and Preservation Procedures

For the trees identified for preservation/protection during construction, the Tree Protection Zones (TPZ) for open spaces and woodlands are calculated as per the City's *Tree Preservation and Protection Standards (2017)*:

$$TPZ = \frac{DBH * 12}{100}$$

A map of the TPZs calculated for each tree surveyed is provided in **Figure 4**. Prohibited activities within TPZs are:

- Construction activities,
- Storage of materials and equipment,
- Excavation,
- Grade changes,
- Cutting, tearing, and breaking of tree roots, branches, and trunks,
- Dumping
- Parking
- Stringing cables/wires

Appropriate fencing methods and fencing materials are required to be pre-approved by the City of Mississauga's Parks and Forestry Division prior to construction. Sign installation is mandatory, and the costs are the sole responsibility of the applicant. Signage must be 16 inches by 24 inches on waterproof material. No other signage is to be fixed onto any tree protection hoarding.

Further, causing disruption to vegetation and shrubs on the south side of the fence behind the Rosemere SPS is likely to increase erosion of the bank into Mary Fix Creek. Naturalization of the amended bank is suggested using gabion stones, dogwood, and willow stakes. Staking the amended streambank should be considered as a separate enhancement to the stream habitat and not as replacement tree resources.

2.4 Compensation Requirements

The City of Mississauga lists the following public tree replacement ratios (minimum replacement values) in **Table 2**.

Table 2: Public Tree Replacement Guide

Diameter at Breast Height (DBH in cm)	Number of Replacement Trees
6-15	1
16-30	2
31-45	3
46-60	4
61-75	5
76-90	6
91-105	7
106-120	8
>120	9

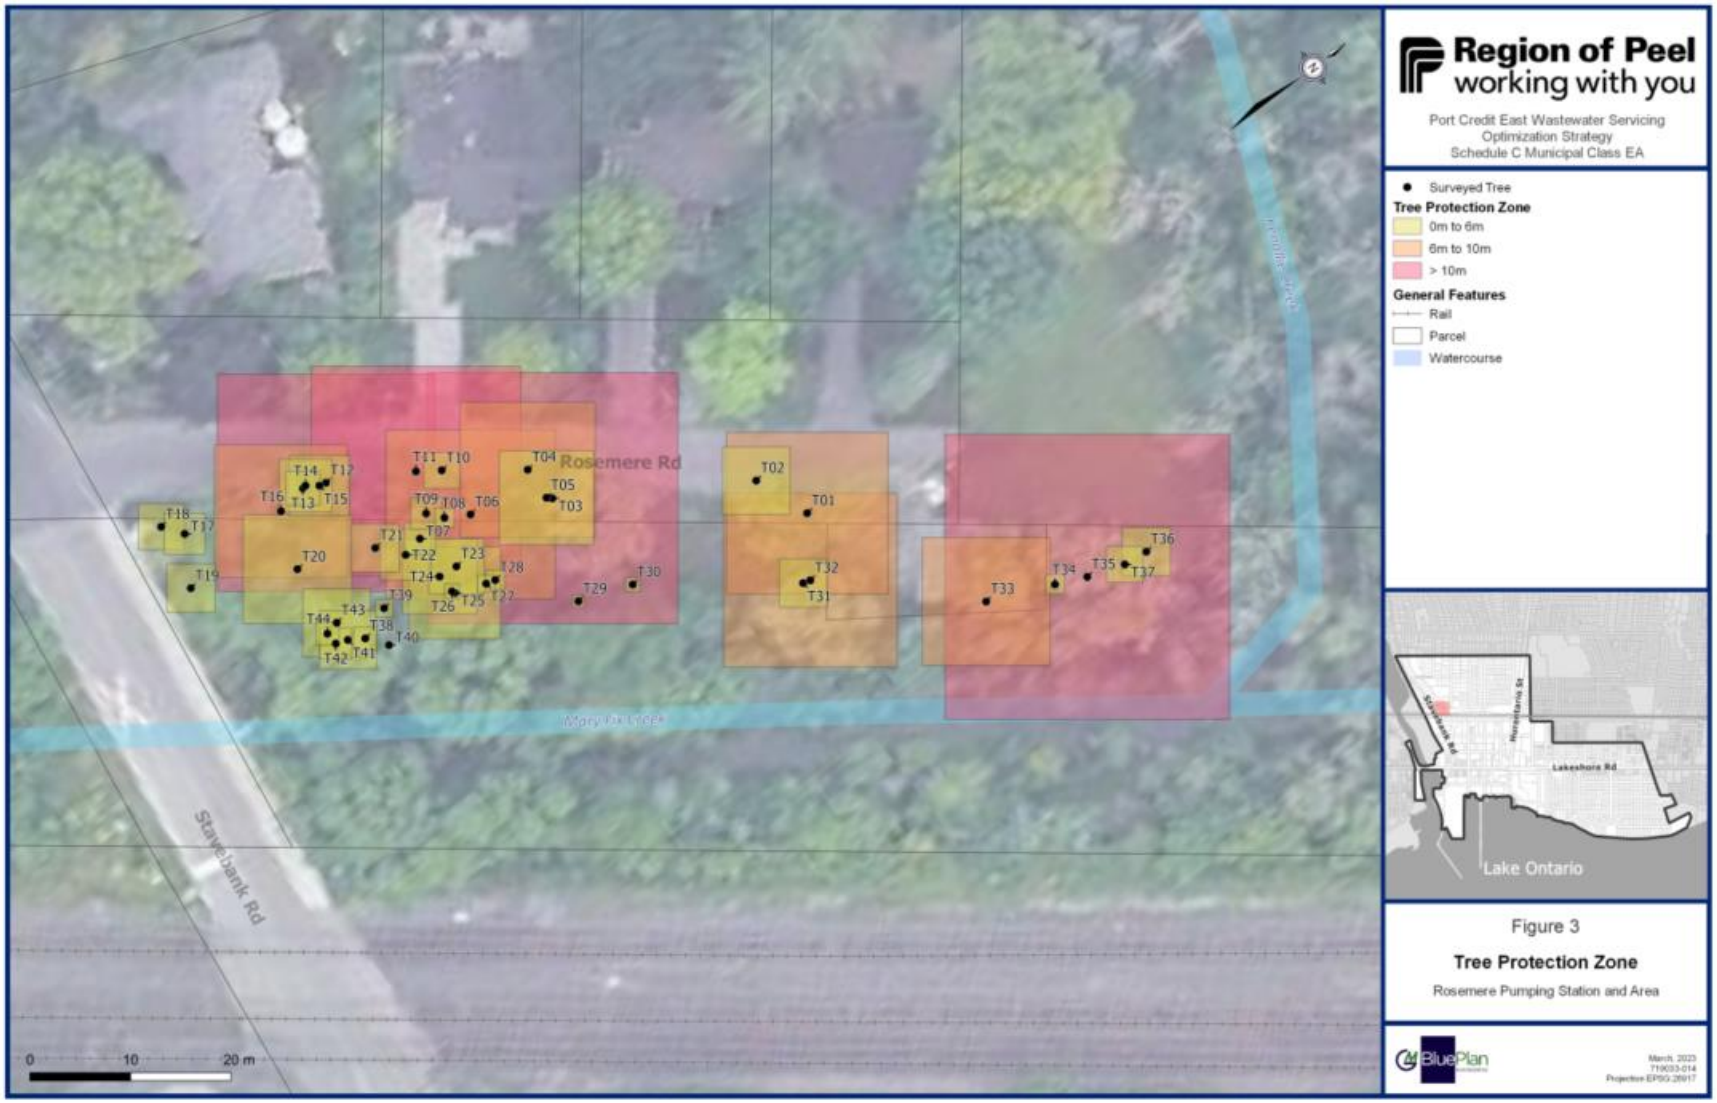

Figure 4: Tree Protection Zone

3.0 Summary of Recommendations

Based on the survey conducted at the Rosemere SPS site, the following recommendations are made:

1) Tree resources that can be maintained during construction will have appropriate tree protection measures put in place as well as regular inspection through the construction period by a Certified Arborist as per the City of Mississauga's *Tree Preservation & Protection Standards (latest revision).*
2) A post-construction inspection by a Certified Arborist or Registered Professional Forester is recommended to check for damage that may have occurred during construction and to ensure appropriate pruning or other mitigation measures in accordance with best management practices and arboricultural standards.
3) Based on the space requirements for the new Rosemere SPS, ensure that public trees are replaced as per the City of Mississauga's *Tree Preservation & Protection Standards (latest revision)*.

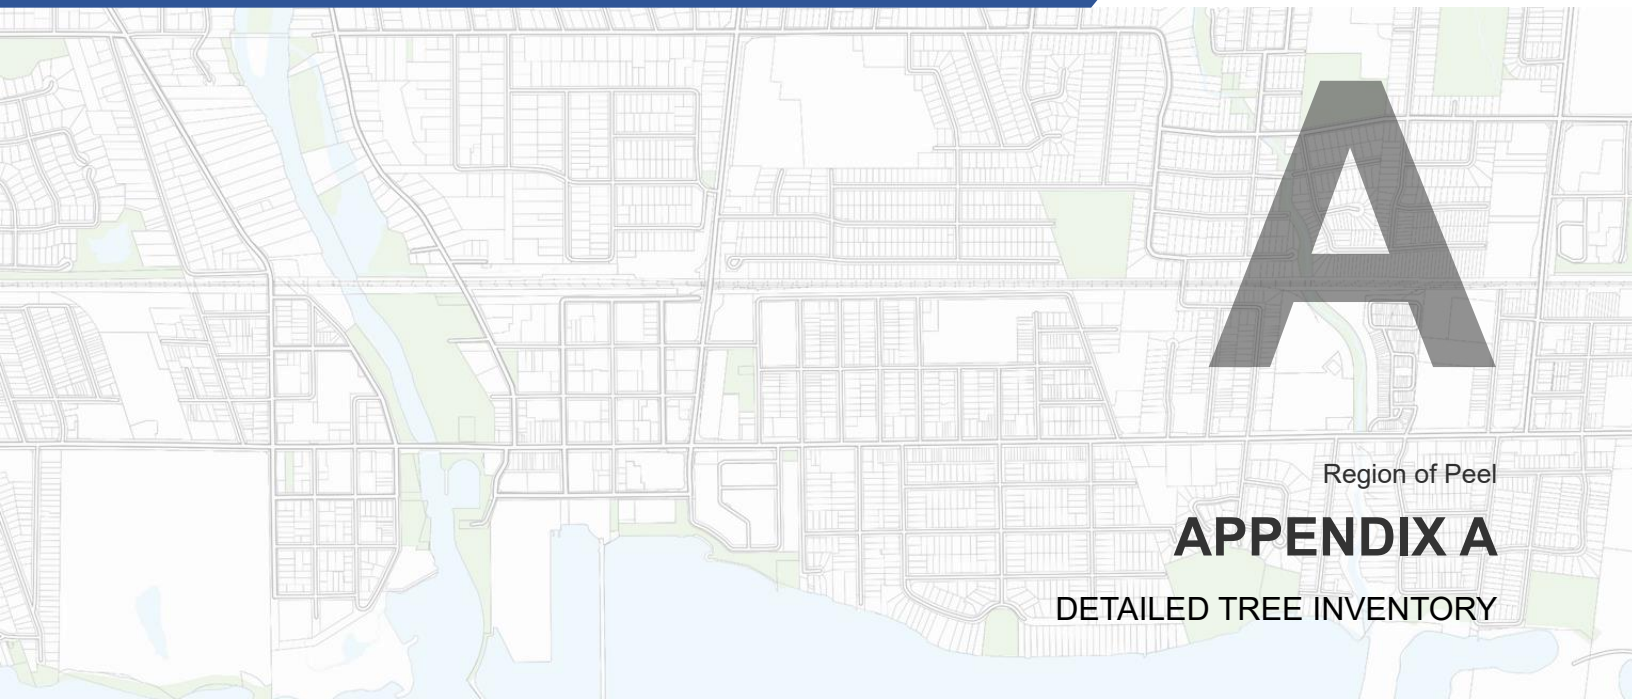
4.0 Limitations of Assessment

Only trees identified in this report were included in the inventory. The assessment of the trees has been completed using standard arboricultural techniques for basic assessment. Visual inspection was conducted from the ground of above-ground tree parts including structural defects, scars, indication of decay, evidence of wildlife and insect damage, general condition of trees, and indication of potentially hazardous trees.

Locations of trees provided in the report were determined as accurately as possible based on the best information available through the use of global positioning unit capture.

Recommendations are based on the discussion of the site plan at the time of the site visit. Note that trees are living organisms and their health and vigour can change over time. Changes in site or weather condition in addition to seasonal growth patterns may lead to stress and strain on certain tree parts which could put added demands on the structural integrity of the tree and its anchorage system. Great stresses and forces applied to the tree may overload the tree leading to full or part tree failure.

Every effort has been made to ensure that this assessment is reasonably accurate, though assessment should re-occur during the construction and post construction phase with regular inspection of tree protection erections. The assessment presented in this report is valid at the time of inspection.



A

Region of Peel

APPENDIX A

DETAILED TREE INVENTORY

Tree Tag ID	Species ID Common Name	Species ID Scientific Name	Diameter at Breast Height (cm)	TPZ (m) (DBH*12/100) Open Spaces & Woodlands	Estimated Crown Size (m)	Tree Health	Structure	Overall Condition	Comments	Preservation Comments
T01	Catalpa	*Catalpa speciosa*	67	8.04	10	Poor, Dead	Poor	Poor	- Large cavity in basal/root area extending approx. 2m in height from ground in trunk - Many previously broken twigs - Crown is asymmetrical, small compared to tree height	- Trunk seems to have retained good strength, despite large cavity, crown in poor condition, good habitat tree, though suspected dead (lack of buds)
T02	Red maple	*Acer rubrum*	28	3.36	11	Poor	Fair, Poor	Poor	- Trunk is in good condition, main stem/branch in fair condition, large branches from trunk and main are in poor condition, bark peeling from branches. - Evidence of broken & pruned branches	- With additional pruning retention is possible
T03	Willow sp.	*Salix spp.*	104	12.48	12	Fair	Fair	Fair	- 2 broken large branches (old breaks) - 3 cavities visible on trunk from ground observation - Possible bird nest present - Lots of English Ivy growth on main trunk extending approx. 2/3 of trunk - Suspected weeping willow	- Maintain and monitor
T04	Black locust	*Robinia pseudoacacia*	56	6.72	7	Fair, Poor	Poor	Poor	- This is one of two stems of basally split tree - Crown very asymmetrical with heavy lean toward roadway - Evidence of broken branches	- Remove (if required) and replace otherwise monitor
T05	Black locust	*Robinia pseudoacacia*	39	4.68	17	Poor	Poor	Poor	- This is stem 2 of a basally split tree, this stem has additional trunk growth in vertical plane, of DBH 13 cm - Evidence of broken branches, split at base of trunk - Additional uprooted tree leaning on upper scaffold branches (increased weight) - New branch has fallen from the trunk of the tree onto the ground due to windthrow or wind issues (January 18, 2023)	- Remove and replace
T06	Black locust	*Robinia pseudoacacia*	70	8.4	9	Poor	Poor	Poor	- Cavities in trunk, 5 codominant stems with tensions cracks apparent, likely included bark - No active twigs and branches in crown, very sparse - Broken branches apparent	- Remove and replace
T07	Black locust	*Robinia pseudoacacia*	13	1.56	4	Poor	Poor	Poor	- Scaffold branches broken, not a lot of live twigs	- Remove and replace
T08	Black locust	*Robinia pseudoacacia*	8	0.96	4	Poor	Poor	Poor	- Evidence of cavity in trunk, and sounded hollow while tagging, still has life in available twigs, some broken scaffold branches	- Remove and replace
T09	Black locust	*Robinia pseudoacacia*	13	1.56	4	Fair, Poor	Poor	Poor	- Codominant branching near 1.4 m with included bark, seems to have minor crack at this point - Some broken branches	- Remove and replace
T10	Black locust	*Robinia pseudoacacia*	15	1.8	3	Poor	Poor	Poor	- Asymmetrical crown - 2 trunks separate at bottom and returning entwined - Slight lean toward roadway - Broken branches	- Depending on T07, T08, T09, if these are removed then remove T10 as well and replace. Preference for all to be monitored.

Tree Tag ID	Species ID Common Name	Species ID Scientific Name	Diameter at Breast Height (cm)	TPZ (m) (DBH*12/100) Open Spaces & Woodlands	Estimated Crown Size (m)	Tree Health	Structure	Overall Condition	Comments	Preservation Comments
T11	Black locust	*Robinia pseudoacacia*	87	10.44	18	Fair	Fair	Fair	- Some broken scaffold branches toward roadside - Made of 4 codominant stems - Evidence of nesting	- Maintain and monitor
T12	Black locust	*Robinia pseudoacacia*	90	10.8	23	Fair, Poor	Fair	Fair	- Some bark is peeling from main trunk - Cavities present - Codominant stems with included bark - 1 scaffold branch appears to be imminent in its likelihood of failure (likely to fall away from road)	- Prune and monitor
T13	Black locust	*Robinia pseudoacacia*	14	1.68	7	Fair	Poor	Poor	- Large stem extending from main trunk with included bark, bulge at base	- Maintain and monitor
T14	Black locust	*Robinia pseudoacacia*	22	2.64	8	Good	Fair	Fair	- Asymmetrical crown with slight lean toward roadway	- Maintain and monitor
T15	Black locust	*Robinia pseudoacacia*	25	3	4	Fair, Poor	Poor	Poor	- Broken scaffold branches and very small crown	- Monitor and monitor
T16	Black locust	*Robinia pseudoacacia*	55	6.6	8	Fair	Fair, Poor	Fair	- Some broken scaffold branches, codominant stems with included bark - Asymmetrical crown toward roadways	- Maintain and monitor
T17	White pine	*Pinus strobus*	17	2.04	5	Good	Fair	Good	- Crown asymmetrical toward intersection, trunk slightly wavy - Evidence of prior weeping (sap)	- Maintain and monitor
T18	White pine	*Pinus strobus*	19	2.28	6	Poor	Fair	Fair	- Recently raised, tree exhibiting stress, yellow needles, and evidence of weeping (sap)	- Maintain and monitor
T19	White pine	*Pinus strobus*	20	2.4	5	Good	Good	Good	- Recently raised, evidence of weeping (sap)	- Maintain and monitor
T20	Black locust	*Robinia pseudoacacia*	45	5.4	9	Fair	Poor	Poor	- Codominant stems, 2nd stem is DBH 37 cm, - Both stems then split with included bark, both with large cracks/spacing between stems with increased likelihood for failure - Asymmetrical crown and leaning trunks	- Monitor, may need tree supports, otherwise remove and replace
T21	Black locust	*Robinia pseudoacacia*	20	2.4		Dead	Dead	Dead	- This tree is dead, but providing support to windthrown trees and hangers - Marked with orange “X”	- Remove (with care) and replace
T22	Black locust	*Robinia pseudoacacia*	21	2.52		Poor, Dead	Poor, Dead	Poor, Dead	- Partially uprooted, codominant stems, bark removed on large portion of smaller stem (DBH 13 cm) - Currently supported by another tree	- Remove (with care) and replace
T23	Black locust	*Robinia pseudoacacia*	23	2.76		Dead	Dead	Dead	- Uprooted, currently supported by fence	- Remove (with care) and replace
T24	Black locust	*Robinia pseudoacacia*	31	3.72	2	Poor	Poor	Poor	- Tree was previously leaning and has now been completely windthrown - Partial roots still underground but largely uprooted, and trunk is parallel to the ground and resting on the ground	- Remove (with care) and replace

Tree Tag ID	Species ID Common Name	Species ID Scientific Name	Diameter at Breast Height (cm)	TPZ (m) (DBH*12/100) Open Spaces & Woodlands	Estimated Crown Size (m)	Tree Health	Structure	Overall Condition	Comments	Preservation Comments
T25	Dead		38	4.56		Dead	Dead	Dead	- Tree has been completely windthrown and is now resting entirely on T26	- Remove and replace
T26	Black cherry	*Prunus serotina*	6	0.72	2	Fair, Poor	Poor	Poor	- Very steep lean through some buds visible	- Maintain and monitor (young)
T27	Buckthorn	*Rhamnus cathartica*	7	0.84		Good	Poor	Poor	- Invasive species: windthrown trees have broken several branches on this plant and bent others - No longer easily accessible	- Remove and replace
T28	Buckthorn	*Rhamnus cathartica*	8	0.96		Good	Good	Good	- Invasive species	- Remove and replace
T29	Black locust	*Robinia pseudoacacia*	5	0.6	2	Fair	Poor	Poor	- English Ivy growing at base; windthrown trees have broken several branches on this plant and bent others - No longer easily accessible	- Maintain and monitor
T30	Basswood	*Tilia americana*	6	0.72	4	Good	Good	Good	- English Ivy is starting to grow around the trunk	- Maintain and monitor
T31	Basswood	*Tilia americana*	20	2.4	8	Good	Good	Good	- English Ivy is starting to grow around the trunk very close to fence	- Maintain and monitor
T32	Willow sp.	*Salix spp.*	72	8.64		Poor	Poor	Poor	- Tree was topped but it has a lot of regrowth coming out of the trunk - English Ivy is growing around the trunk from the basal areas up to about 2.5 m to 3 m in height removal may cause damage to Basswood next to Willow	- Maintain and monitor (for habitat purposes)
T33	Catalpa	*Catalpa speciosa*	53	6.36	7	Fair	Fair, Poor	Fair	- This Willow is covered by English Ivy vines up to about 9.1 m from the ground - Fair number of broken branches, however trunk seems good otherwise	- Maintain and monitor
T34	Red maple	*Acer rubrum*	8	0.96	8	Good	Fair	Fair	- Slight lean in tree trunk with asymmetrical crown otherwise good condition some English Ivy growing up to about 0.1 m from the ground	- Maintain and monitor
T35	Willow sp.	*Salix spp.*	118	14.16	12	Fair	Fair, Poor	Fair, Poor	- Fence union slightly above DBH looks like it's not very strong there are some cavity holes - English Ivy is growing approximately 2.6 m from the ground on the trunk of the tree - Broken branches and resprouting in certain areas of the canopy cover	- Maintain and monitor
T36	Basswood	*Tilia americana*	20	2.4	6	Poor	Fair, Poor	Poor	- Bark is coming off main trunk, still has buds - Beginning to show basal rot - Cavities - Evidence of insect borehole - Asymmetrical crown, and broken branches	- Remove and replace

Tree Tag ID	Species ID Common Name	Species ID Scientific Name	Diameter at Breast Height (cm)	TPZ (m) (DBH*12/100) Open Spaces & Woodlands	Estimated Crown Size (m)	Tree Health	Structure	Overall Condition	Comments	Preservation Comments
T37	Black cherry	*Prunus serotina*	15	1.8	6	Fair	Fair, Poor	Fair	- Main growth of the trunk is leaning with some new growth compensating as the leader - Some broken branches also resting heavily on dead tree (T36)	- Maintain and monitor
T38	Ash sp.	*Fraxinus spp.*	9.5	1.14	4	Fair, Poor	Poor	Poor	- Strong lean away from main growth of tree with some broken branches - Another tree is leaning on this tree resource - Evidence of some deer browse	- Remove and replace
T39	Ash sp.	*Fraxinus spp.*	7.5	0.9	4	Good	Good	Good	- Tree in good condition	- Maintain and monitor
T41	Black locust	*Robinia pseudoacacia*	24	2.88	4	Poor	Poor	Poor	- Many dead and broken branches - Vines growing up through the canopy	- Remove and replace
T42	Black locust	*Robinia pseudoacacia*	13	1.56	2	Poor	Poor	Poor	- Growing in the fence structure - Broken canopy branches - Lots of vines going through the branches up to the canopy	- Remove and replace
T43	Basswood	*Tilia americana*	28	3.36	5	Fair, Poor	Poor	Fair, Poor	- The live branches on this tree are in good health although there are some branches that are broken and missing bark - There are a couple of cavities and some already missing bark - Structure seems to be a little bit strange in some areas of this tree	- Maintain and monitor
T44	Basswood	*Tilia americana*	9.5	1.14	5	Fair, Poor	Poor	Poor	- The structure of the tree is bent due to heavyweight of vines on the tree trunk - Some of the bark is broken and has led to discoloration in those areas - Potential of pest or disease that's affecting this tree	- Remove and replace
