MISSISSAUGA

Mississauga's Stormwater Charge

As a growing city, and with changes to our climate that bring more frequent intense rainfalls, there is increased stormwater running off hard surfaces like roofs and parking lots and into the City's stormwater system. This results in more costly wear and tear on valuable and critical infrastructure such as storm pipes and creeks.

Stormwater management is important as it reduces the risk of flooding and creek erosion in all Mississauga neighbourhoods, protecting you, your property, infrastructure and our environment. It also helps to improve water quality in our creeks and Lake Ontario.

The City is committed to maintaining and improving stormwater infrastructure through day-to-day operations and maintenance as well as long-term planning and construction.

The Stormwater Charge is a dedicated funding source to keep our stormwater system in good working order and to plan for costly repairs in the future.
